Nieger, 2012-12-06 For decades the materials sector of an enterprise has been relatively unimportant compared with the production and sales side but it has gained in importance during the last 25-30 years This is clearly indicated by the increasing attachment of this sector to the commercial side of an enterprise the delegation of materials oriented tasks to highly qualified people and closely correlated the integration of the materials sector with the key positions of a company's organizational hierarchy The materials management area has become an interesting part of business life Stimulating this development was the realization that an important part of company rationalization had been overlooked namely provision of adequate supervision of the materials flow This area was given particular attention firstly because the relatively high percentage of materials losses the value of materials and cost of supervision in the total production costs offered the possibility of considerable cost reductions and liquidity improvements and secondly because effective supervision permits faster reactions to changes and reliable delivery times essential considerations for a competitive company An important contribution to the realization of these possibilities is found in an efficient organizational structure in combination with an integrated information system Together they provide coordinated supervision of the various control functions associated with the materials flow and a concentration of expertise      **MATERIALS MANAGEMENT** DATTA, A. **Maritime Logistics Value in Knowledge Management**  
Eon-Seong Lee, Dong-Wook Song, 2014-08-21

Knowledge management has been widely applied to various industries as a good strategy to help improve firms' performance. As globalisation accelerates and international trade increases, more and more maritime transport operations have become one of the vital industries to receive large attention from international managers. This is because the managers have perceived that the maritime transport system is an integrated entity within the global logistics and supply chain and it should be therefore managed in the most efficient and effective ways possible as an organic body within a global logistics system. Taking this approach, this book examines how maritime transport operators such as shipping companies, port terminal operators and freight forwarders could successfully play a role within the global logistics flow wherein they are embedded by improving their logistic value, i.e. maritime logistics value. As per the objective, the current book suggests a knowledge management based solution. It attempts to systematically investigate what types of knowledge are needed in the maritime logistics industry, how maritime operators could effectively acquire the knowledge and whether the acquired knowledge would help maritime operators enhance maritime logistics value. This book provides not only comprehensive understandings of knowledge management strategy but also its practical application to the maritime logistics industry. This would therefore be a useful guidebook for the managers, academics and undergraduate/postgraduate students in the field of maritime transport and global logistics to help them to gain comprehensive knowledge of the application of knowledge management strategy to the industry.
