Lagnado,2021-10-21 How do we make sense of complex evidence What are the cognitive principles that allow detectives to solve crimes and lay people to puzzle out everyday problems To address these questions David Lagnado presents a novel perspective on human reasoning At heart we are causal thinkers driven to explain the myriad ways in which people behave and interact We build mental models of the world enabling us to infer patterns of cause and effect linking words to deeds actions to effects and crimes to evidence But building models is not enough we need to evaluate these models against evidence and we often struggle with this task We have a knack for explaining but less skill at evaluating Fortunately we can improve our reasoning by reflecting on inferential practices and using formal tools This book presents a system of rational inference that helps us evaluate our models and make sounder judgments The Book of Evidence Peter Achinstein,2001-09-20 What is required for something to be evidence for a hypothesis In this fascinating elegantly written work distinguished philosopher of science Peter Achinstein explores this question rejecting typical philosophical and statistical theories of evidence He claims these theories are much too weak to give scientists what they want a good reason to believe and in some cases they furnish concepts that mistakenly make all evidential claims a priori Achinstein introduces four concepts of evidence defines three of them by reference to potential evidence and characterizes the latter using a novel

epistemic interpretation of probability The resulting theory is then applied to philosophical and historical issues Solutions are provided to the grue ravens lottery and old evidence paradoxes and to a series of questions These include whether explanations or predictions furnish more evidential weight whether individual hypotheses or entire theoretical systems can receive evidential support what counts as a scientific discovery and what sort of evidence is required for it The historical questions include whether Jean Perrin had non circular evidence for the existence of molecules what type of evidence J J Thomson offered for the existence of the electron and whether as is usually supposed he really discovered the electron Achinstein proposes answers in terms of the concepts of evidence introduced As the premier book in the fabulous new series Oxford Studies in Philosophy of Science this volume is essential for philosophers of science and historians of science as well as for statisticians scientists with philosophical interests and anyone curious about scientific reasoning **Developing**

Intuitions as Evidence Joel Pust, 2021-11-18 First published in 2000 Starting with Kripke's quotation on intuitive content being philosophic evidence in this essay the author aims to demonstrate how contemporary philosophy relies on intuitions as evidence to explain what intuitions are and show why certain contemporary arguments against the use of intuitions as evidence fail

Believable Evidence Veli Mitova, 2017-05-25 Believable Evidence argues that evidence consists of true beliefs This claim opens up an entirely overlooked space on the ontology of evidence map between purely factualist positions such as those of Williamson and Dancy and purely psychologist ones such as that of Conee and Feldman Veli Mitova provides a compelling three level defence of this view in the first contemporary monograph entirely devoted to the ontology of evidence First once we see the evidence as a good reason metaethical considerations show that the evidence must be psychological and veridical Second true belief in particular allows epistemologists to have everything they want from the concept of evidence Finally the view helps us locate the source of the normative authority of evidence The book challenges a broad range of current views on the ontology of reasons and their normative authority making it a must read for scholars and advanced students in metaethics and epistemology
