Ferkiss,1974 **Process and Providence** Bradley J. Gundlach,2013-11-30 Charles Hodge James McCosh B B Warfield these leading professors at Princeton College and Seminary in the nineteenth and early twentieth centuries are famous for their orthodox Protestant positions on the doctrine of evolution In this book Bradley Gundlach explores the surprisingly positive embrace of developmental views by the whole community of thinkers at old Princeton showing how they embraced the development not only of the cosmos and life forms but also of Scripture and the history of doctrine even as they defended their historic Christian creed Decrying an intellectual world gone evolution mad the old Princetonians nevertheless welcomed evolution properly limited and explained Rejecting historicism and Darwinism they affirmed developmentalism and certain non Darwinian evolutionary theories finding process over time through the agency of second causes God s providential rule in the world both enlightening and polemically useful They also took care to identify the pernicious causes and effects of antisupernatural evolutionisms By the 1920s their nuanced distinctions together with their advocacy of both biblical inerrancy and modern science were overwhelmed by the brewing fundamentalist controversy From the first American review of the pre Darwinian Vestiges of the Natural History of Creation to the Scopes Trial and the forced reorganization of Princeton Seminary in 1929 Process and Providence reliably portrays the preeminent conservative Protestants in America as they defined contested and answered precisely and incisively the many facets of the evolution question **The Convergent Evolution of Agriculture in Humans and Insects** Ted R

Schultz, Richard Gawne, Peter N Peregrine, 2022-02-22 Contributors explore common elements in the evolutionary histories of both human and insect agriculture resulting from convergent evolution During the past 12 000 years agriculture originated in humans as many as twenty three times and during the past 65 million years agriculture also originated in nonhuman animals at least twenty times and in insects at least fifteen times It is much more likely that these independent origins represent similar solutions to the challenge of growing food than that they are due purely to chance This volume seeks to identify common elements in the evolutionary histories of both human and insect agriculture that are the results of convergent evolution The goal is to create a new synthetic field that characterizes quantifies and empirically documents the evolutionary and ecological mechanisms that drive both human and nonhuman agriculture The contributors report on the results of quantitative analyses comparing human and nonhuman agriculture discuss evolutionary conflicts of interest between and among farmers and cultivars and how they interfere with efficiencies of agricultural symbiosis describe in detail agriculture in termites ambrosia beetles and ants and consider patterns of evolutionary convergence in different aspects of agriculture comparing fungal parasites of ant agriculture with fungal parasites of human agriculture analyzing the effects of agriculture on human anatomy and tracing the similarities and differences between the evolution of agriculture in humans and in a single relatively well studied insect group fungus farming ants

Genetic Revolution: Shaping Life for Tomorrow Daniel Stephen Halacy, 1974

Emergence and Modularity in Life Sciences Lars H. Wegner, Ulrich Lüttge, 2019-02-12 This book focuses on modules and emergence with self organization in the life sciences As Aristotle observed so long ago the whole is more than the sum of its parts However contemporary science is dominated by reductionist concepts and tends to neglect the non reproducible features of complex systems which emerge from the interaction of the smaller units they are composed of The book is divided into three major parts the essays in part A highlight the conceptual basis of emergence linking it to the philosophy of science systems biology and sustainability This is subsequently exemplified in part B by applying the concept of emergence to various biological disciplines such as genetics developmental biology neurobiology plant physiology and ecology New aspects of emergence come into play when biology meets the technical sciences as revealed in a chapter on bionics In turn part C adopts a broader view revealing how the organization of life follows a hierarchical order in terms of scalar dimensions ranging from the molecular level to the entire biosphere The idea that life is primarily and exclusively shaped by processes at the molecular level and in particular by the information encoded in the genome is refuted rather there is no hierarchy with respect to the level of causation in the cross talk between the levels In the last two chapters the evolutionary trend toward ever increasing complexity in living systems is interpreted in terms of the Gaia hypothesis sensu Lovelock the entire biosphere is viewed as a functional unit or holobiont like system organized to develop and sustain life on Earth

Culture History and Convergent Evolution Huw S.

Groucutt, 2020-07-23 This volume brings together diverse contributions from leading archaeologists and paleoanthropologists

covering various spatial and temporal periods to distinguish convergent evolution from cultural transmission in order to see if we can discover ancient human populations. With a focus on lithic technology, the book analyzes ancient materials and cultures to systematically explore the theoretical and physical aspects of culture convergence and populations in human evolution and prehistory. The book will be of interest to academics, students, and researchers in archaeology, paleoanthropology, genetics, and paleontology. The book begins by addressing early prehistory, discussing the convergent evolution of behaviors and the diverse ecological conditions driving the success of different evolutionary paths. Chapters discuss these topics and technology in the context of the Lower Paleolithic, Earlier Stone Age, and Middle Paleolithic. The book then moves towards a focus on the prehistory of our species over the last 40,000 years. Topics covered include the human evolutionary and dispersal consequences of the Middle Upper Paleolithic Transition in Western Eurasia. Readers will also learn about the cultural convergences and divergences that occurred during the Terminal Pleistocene and Holocene, such as the budding of human societies in the Americas. The book concludes by integrating these various perspectives and theories and explores different methods of analysis to link technological developments and cultural convergence.

Online Worlds: Convergence of the Real and the Virtual William Sims Bainbridge, 2009-12-08 William Sims Bainbridge Virtual worlds are persistent online computer-generated environments where people can interact, whether for work or play, in a manner comparable to the real world. The most prominent current example is World of Warcraft. Corneliussen and Rettberg 2008, a massively multiplayer online game with 11 million subscribers. Some other virtual worlds, notably Second Life, Rymaszewski et al 2007, are not games at all but Internet-based collaboration contexts in which people can create virtual objects, simulated architecture, and working groups. Although interest in virtual worlds has been growing for at least a dozen years, only today it is possible to bring together an international team of highly accomplished authors to examine them with both care and excitement, employing a range of theories and methodologies to discover the principles that are making virtual worlds increasingly popular and may in the future establish them as a major sector of human-centered computing.

Neurosphere Donald P. Dulchinos, 2005-10-21 According to Donald Dulchinos, the real action on the Internet isn't in the realm of commerce. It is plain and simple in the realm of religion. But not exactly that old-time religion. This book is about the spiritual impact of our increasing ability to communicate quickly and with enhanced evolution. It's about our search for meaning, our hunger for a glimpse at humanity's future development in which, frighteningly or excitingly, the trend is clearly toward increasing integration of telecommunications and information technology with the body itself. Electronic prosthetics, direct neural implants, and the brain's control of electronic and mechanical limbs move the boundary that used to exist between human and machine to some undefined frontier inside our bodies, our brains, and perhaps our minds. And if the electronics inside my brain connect directly with the electronics inside your brain, how is it meaningful to speak as though we are not part of one larger entity? Dulchinos writes. Another way of saying this might be that everything that rises must

converge Or we are all part of God Or we are all moving toward living in the field sharing Group Mind Dulchinos traces ideas of evolution anthropology biology and theology all of which point toward a betterment a unity and argues cogently that these ideas find their embodiment in the technology of the World Wide Web Neurosphere or God or Group Mind call it what you will is about technology and the mechanics of unity Although other books on new technology and new consciousness touch on many of the ideas in Neurosphere none do so in quite such a straightforward logical way Dulchinos has a way of telling personal stories that make the technical accessible to the dreamer the spiritual comprehensible to the skeptic and the future of body technology less fear inducing to everyone
