An Introduction to Language Processing with Perl and Prolog Pierre M. Nugues, 2006-11-22 The areas of natural language processing and computational linguistics have continued to grow in recent years driven by the demand to automatically process text and spoken data With the processing power and techniques now available research is scaling up from lab prototypes to real world proven applications This book teaches the principles of natural language processing first covering linguistics issues such as encoding entropy and annotation schemes defining words tokens and parts of speech and morphology It then details the language processing functions involved including part of speech tagging using rules and stochastic techniques using Prolog to write phase structure grammars parsing techniques and syntactic formalisms semantics predicate logic and lexical semantics and analysis of discourse and applications in dialog systems The key feature of the book is the author's hands on approach throughout with extensive exercises sample code in Prolog and Perl and a

detailed introduction to Prolog The reader is supported with a companion website that contains teaching slides programs and additional material The book is suitable for researchers and students of natural language processing and computational linguistics

Logic and Grammar Sylvain Pogodalla, Myriam Quatrini, Christian Retoré, 2011-06-14 This book contains selected papers from the Colloquium in Honor of Alain Lecomte held in Pauillac France in November 2007 The event was part of the ANR project Pr lude Towards Theoretical Pragmatics Based on Ludics and Continuation Theory the proceedings of which were published in another FoLLI LNAI volume LNAI 6505 edited by Alain Lecomte and Samuel Tron on The selected papers of this Festschrift volume focus on the scientific areas in which Alain Lecomte has worked and to which he has contributed formal linguistics computational linguistics logic and cognition

Reversible Grammar in Natural Language Processing T. Strzalkowski, 2012-12-06 Reversible grammar allows computational models to be built that are equally well suited for the analysis and generation of natural language utterances This task can be viewed from very different perspectives by theoretical and computational linguists and computer scientists The papers in this volume present a broad range of approaches to reversible bi directional and non directional grammar systems that have emerged in recent years This is also the first collection entirely devoted to the problems of reversibility in natural language processing Most papers collected in this volume are derived from presentations at a workshop held at the University of California at Berkeley in the summer of 1991 organised under the auspices of the Association for Computational Linguistics This book will be a valuable reference to researchers in linguistics and computer science with interests in computational linguistics natural language processing and machine translation as well as in practical aspects of computability

Advanced Logic Programming for Language Processing Patrick Saint-Dizier, 1994 For twenty years unification and rewriting have played a major role in the modeling of linguistic phenomena More recently notions of types as in typed feature systems and constraints have emerged and are now extensively used in theoretical computational linguistics

and the development of applications Recent developments in the area of logic programming such as new compilations techniques constraints object oriented programming and higher order programming coincide perfectly with the needs of computational linguistics Moreover logic programming offers a well defined theoretical framework whose computational properties are well identified and are efficient to operate Advanced Logic Programming for Language Processing covers the main advanced features of logic programming Each feature is introduced step by step and its use for natural language processing is studied in detail A large number of programs illustrate the advantages and current limitations of each feature This book is essential reading for advanced undergraduates and graduates in computational linguistics and cognitive science It will also interest engineers involved in the development of natural language techniques *Logic and Engineering of Natural Language Semantics* Daisuke Bekki,Koji Mineshima,Elin McCready,2024-05-30 This book constitutes the refereed post conference proceedings of the 20th International Conference LENLS20 held in Osaka Japan during November 18 20 2023 The 19 full papers presented were carefully reviewed and selected from 46 submissions The conference aims to cover the topics at the Intersection of Language and logic and so Centers Around Linguistics both Theoretical and Computational Logic Philosophy and other sorts of Formal Approaches to these topics such as Game Theory **Principles and Prediction** Mushira Eid,Gregory K. Iverson,1993-03-25 The volume is divided into four sections typology syntax discourse and phonology Two of the typology papers study the structure and organization of category systems Joseph Greenberg Linda Schwartz the third discusses language typology and universals from the perspective of language acquisition Fred Eckman The eight papers in the syntax section are of three types Edith Moravcsik and James Tai discuss general issues of linguistic theory domain Four papers Mushira Eid Michael Kac Nancy Hedberg Larry Hutchinson address specific analyses and their implications from language particular and theoretical perspectives The papers by Deborah Dahl and Thomas Rindflesch relate theoretical concepts and analyses to natural language processing In the section on discourse the contributions by Anita Barry and Amy Sheldon deal with interpersonal conflict George Yule discusses the selection between direct and indirect speech forms Helga Delisle and Cynthia Clamons consider ways in which choices among or variation in some grammatical and semantic categories may be explainable on pragmatic and discourse grounds The phonology papers are focused on two major themes underspecification and borrowing Four of the articles address the issue of underspecification in phonological representations Daniel Dinnsen Joseph Stemberger Janet Bing Gregory Iverson In the other two papers questions of borrowing are discussed in Nancy Stenson s contribution from a synchronic perspective and in Gunter Schaarsmidt s paper from a historical one The volume is completed by a subject index and a language index *The Logic of Categorical Grammars* Richard Moot,Christian Retore,2012-06-30 This book is intended for students in computer science formal linguistics mathematical logic and to colleagues interested in categorial grammars and their logical foundations These lecture notes present categorial grammars as deductive systems in the approach called parsing as deduction and the book includes detailed proofs of their main
