Logic And Representation:

Logic and Representation Robert C. Moore, 1995 *Logic and Representation* brings together a collection of essays written over a period of ten years that apply formal logic and the notion of explicit representation of knowledge to a variety of problems in artificial intelligence natural language semantics and the philosophy of mind and language Particular attention is paid to modelling and reasoning about knowledge and belief including reasoning about one's own beliefs and the semantics of sentences about knowledge and belief Robert C Moore begins by exploring the role of logic in artificial intelligence considering logic as an analytical tool as a basis for reasoning systems and as a programming language He then looks at various logical analyses of propositional attitudes including possible world models syntactic models and models based on Russellian propositions Next Moore examines autoepistemic logic a logic for modelling reasoning about one's own beliefs Rounding out the volume is a section on the semantics of natural language including a survey of problems in semantic representation a detailed study of the relations among events situations and adverbs and a presentation of a unification based approach to semantic interpretation Robert C Moore is principal scientist of the Artificial Intelligence Center of SRI International

Foundations of Knowledge Representation and Reasoning Gerhard Lakemeyer, Bernhard Nebel, 1994-06-28 The papers collected in this book cover a wide range of topics in asymptotic statistics In particular up to date information is presented in detection of systematic changes in series of observation in robust regression analysis in numerical empirical processes and in related areas of actuarial sciences and mathematical programming The emphasis is on theoretical contributions with impact on statistical methods employed in the analysis of experiments and observations by biometricians econometricians and engineers

Logic-based Knowledge Representation Peter Jackson, Han Reichgelt, Frank Van Harmelen, 1989 This book explores the building of expert systems using logic for knowledge representation and meta level inference for control It presents research done by members of the expert systems group of the Department of Artificial Intelligence in Edinburgh often in collaboration with others based on two hypotheses that logic is a suitable knowledge representation language and that an explicit representation of the control regime of the theorem prover has many advantages The editors introduce these hypotheses and present the arguments in their favor They then describe Socrates a tool for the construction of expert systems that is based on these assumptions They devote the remaining chapters to the solution of problems that arise from the restrictions imposed by Socrates's representation language and from the system's inefficiency The chapters dealing with the representation problem present a reified approach to temporal logic that makes it possible to use nonstandard logics without extending the system and describe a general proof method for arbitrary modal logics Those dealing with the efficiency problem discuss the technique of partial evaluation and its limitations as well as another possible solution known as assertion time inference Peter Jackson is a Senior Scientist in the Department of Applied Mathematics and Computer Sciences at the McDonnell Douglas Research Laboratory in St Louis Han Reichgelt is a Lecturer

in Department of Psychology at the University of Nottingham Frank van Harmelen is a Research Fellow in the Mathematical Reasoning Group at the University of Edinburgh

Knowledge Representation and Reasoning Under Uncertainty Michael Masuch,Laszlo Polos,1994-06-28 This volume is based on the International Conference Logic at Work held in Amsterdam The Netherlands in December 1992 The 14 papers in this volume are selected from 86 submissions and 8 invited contributions and are all devoted to knowledge representation and reasoning under uncertainty which are core issues of formal artificial intelligence Nowadays logic is not any longer mainly associated to mathematical and philosophical problems The term applied logic has a far wider meaning as numerous applications of logical methods particularly in computer science artificial intelligence or formal linguistics testify As demonstrated also in this volume a variety of non standard logics gained increased importance for knowledge representation and reasoning under uncertainty

Deep Learning with Relational Logic Representations G. Šír,2022-11-23 Deep learning has been used with great success in a number of diverse applications

ranging from image processing to game playing and the fast progress of this learning paradigm has even been seen as paving the way towards general artificial intelligence However the current deep learning models are still principally limited in many ways This book Deep Learning with Relational Logic Representations addresses the limited expressiveness of the common tensor based learning representation used in standard deep learning by generalizing it to relational representations based in mathematical logic This is the natural formalism for the relational data omnipresent in the interlinked structures of the Internet and relational databases as well as for the background knowledge often present in the form of relational rules and constraints These are impossible to properly exploit with standard neural networks but the book introduces a new declarative deep relational learning framework called Lifted Relational Neural Networks which generalizes the standard deep learning models into the relational setting by means of a lifting paradigm known from Statistical Relational Learning The author explains how this approach allows for effective end to end deep learning with relational data and knowledge introduces several enhancements and optimizations to the framework and demonstrates its expressiveness with various novel deep relational learning concepts including efficient generalizations of popular contemporary models such as Graph Neural Networks Demonstrating the framework across various learning scenarios and benchmarks including computational efficiency the book will be of interest to all those interested in the theory and practice of advancing representations of modern deep learning architectures
