Lettre à Mr. le colonel Leake par Mr. L. Ross Ludwig Ross, 1837 **Doing Science + Culture** Roddey Reid, Sharon Traweek, 2013-01-11 Doing Science Culture is a groundbreaking book on the cultural study of science technology and medicine Outstanding contributors including life and physical scientists anthropologists sociologists literature communication scholars and historians of science who focus on the analysis of science and scientific discourses within culture what it means to do science **The Microbial Models of Molecular Biology** Rowland H. Davis, 2003-09-11 This book explains the role of simple biological model systems in the growth of molecular biology Essentially the whole history of molecular biology is presented here tracing the work in bacteriophages in E coli the role of other prokaryotic systems and also the protozoan and algal models Paramecium and Chlamydomonas primarily and the move into eukaryotes with the fungal systems Neurospora Aspergillus and yeast Each model was selected for its appropriateness for asking a given class of questions and each spawned its own community of investigators Some individuals made the transition to a new model over time and remnant communities of investigators continue to pursue questions in all these models as the cutting edge of molecular biological research flowed onward from model to model and onward into higher organisms and ultimately mouse and man *The Veil of Isis* Pierre Hadot, 2006

Nearly twenty five hundred years ago the Greek thinker Heraclitus supposedly uttered the cryptic words *Physis kruptesthai philei* How the aphorism usually translated as Nature loves to hide has haunted Western culture ever since is the subject of this engaging study by Pierre Hadot Taking the allegorical figure of the veiled goddess Isis as a guide and drawing on the work of both the ancients and later thinkers such as Goethe Rilke Wittgenstein and Heidegger Hadot traces successive interpretations of Heraclitus words Over time Hadot finds Nature loves to hide has meant that all that lives tends to die that Nature wraps herself in myths and for Heidegger that Being unveils as it veils itself Meanwhile the pronouncement has been used to explain everything from the opacity of the natural world to our modern angst From these kaleidoscopic exegeses and usages emerge two contradictory approaches to nature the Promethean or experimental questing approach which embraces technology as a means of tearing the veil from Nature and revealing her secrets and the Orphic or contemplative poetic approach according to which such a denuding of Nature is a grave trespass In place of these two attitudes Hadot proposes one suggested by the Romantic vision of Rousseau Goethe and Schelling who saw in the veiled Isis an allegorical expression of the sublime Nature is art and art is nature Hadot writes inviting us to embrace Isis and all she represents art makes us intensely aware of how completely we ourselves are not merely surrounded by nature but also part of nature

A Machine to Make a Future Paul Rabinow, Talia Dan-Cohen, 2013-10-31 A Machine to Make a Future represents a remarkably original look at the present and possible future of biotechnology research in the wake of the mapping of the human genome The central tenet of Celera Diagnostics the California biotech company whose formative work during 2003 is the focus of the book is that the emergent knowledge about the genome with its profound implications for human health can now be turned into a powerful diagnostic apparatus one that will yield breakthrough diagnostic and therapeutic products and potentially profit Celera's efforts assuming they succeed may fundamentally reshape the fabric of how health and health care are understood practiced and managed Presenting a series of interviews with all of the key players in Celera Diagnostics Paul Rabinow and Talia Dan Cohen open a fascinating window on the complexity of corporate scientific innovation This marks a radical departure from other books on the biotech industry by chronicling the vicissitudes of a project during a finite time period in the words of the actors themselves Ultimately the authors conclude Celera Diagnostics is engaged in a future characterized not by geniuses and their celebrated discoveries but by a largely anonymous and widely distributed profusion of data and results a machine to make a future In their new afterword Rabinow and Dan Cohen revisit Celera Diagnostics as its mighty machine grinds along wondering along with the scientists what constitutes success and what constitutes failure The pathos of the situation turns on how one poses the question as much as how one answers it

Split and Splice Hans-Jörg Rheinberger, 2023-04-21 Esteemed historian and philosopher of science Hans J org Rheinberger explores the incredible diversity of scientific experimentation in his new book which extends his ground breaking epistemological studies of the life sciences and the experimental practices that have made them so productive Rheinberger explores the materiality

of experiment of its objects and instruments the construction of models and myriad ways of making things visible The first part of the book is devoted to the circumstances and conditions that give the process of experimentation its structural cachet and make it a device from which novelty can emerge Then in the second part Rheinberger focuses on the relations that experimental systems develop among each other specifically their characteristic temporal spatial and narrative dimensions The concepts that guide his investigation emerge through accessible examples most of which are drawn from molecular biology including from the author's own laboratory notebooks from his years researching ribosomes This is a tour de force by one of today's most influential theorists of scientific practice

The Cunning of Uncertainty Helga Nowotny, 2015-11-19 Uncertainty is interwoven into human existence It is a powerful incentive in the search for knowledge and an inherent component of scientific research We have developed many ways of coping with uncertainty We make promises manage risks and make predictions to try to clear the mists and predict ahead But the future is inherently uncertain and the mist that shrouds our path an inherent part of our journey The burning question is whether our societies can face up to uncertainty learn to embrace it and whether we can open up to a constantly evolving future In this new book Helga Nowotny shows how research can thrive at the cusp of uncertainty Science she argues can eventually transform uncertainty into certainty but into certainty which remains always provisional Uncertainty is never completely static It is constantly evolving It encompasses geological time scales and at the level of human experience split second changes as cells divide Life and death decisions are taken in the blink of the eye while human interactions with the natural environment may reveal their impact over millennia Uncertainty is cunning It appears at unexpected moments it shuns the straight line takes the oblique route and sometimes the unexpected short cut As we acknowledge the cunning of uncertainty its threats retreat We accept that any scientific inquiry must produce results that are provisional and uncertain This message is vital for politicians and policy makers do not be tempted by small short term controllable gains to the exclusion of uncertain high gain opportunities Wide ranging in its use of examples and enriched by the author's experience as President of the European Research Council one of the world's

leading funding organisations for fundamental research The Cunning of Uncertainty is a must read for students and scholars of all disciplines politicians policy makers and anyone concerned with the fundamental role of knowledge and science in our societies today
