

## CMPUT 175 - Lab 1: Dictionaries, Strings, Files

**Goal:** Practice using Python dictionaries, formatting strings, and reading/writing to text files.

- Useful list methods: `append()`, `sort()`
- Useful string methods and operators: `format()` or `%`, `lower()`, `split()`, `upper()`, `[:]`, `+`
- Useful dictionary methods: `items()`, `keys()`, `values()`

There are many more methods, operators, and functions that you can look up in the lecture slides or in the Python 3 online documentation: <https://docs.python.org/3/index.html>

Another reference that may be helpful for understanding how to use `format()` is:

<https://www.programiz.com/python-programming/methods/string/format>

### Exercise 1: Python Warm Up (must complete)

**Problem:** Follow the steps below to create a program for Bluebell Greenhouses that prints a purchase receipt. In the process, practice using dictionaries and formatting strings.

1. Bluebell Greenhouses sells the following Spring flower bulbs. Create a dictionary that stores this information. Which data should be the keys (must be unique), and which should be the values?

Flower Bulb Name	Price Per Bulb
daffodil	\$ 0.35
tulip	\$ 0.33
crocus	\$ 0.25
hyacinth	\$ 0.75
bluebell	\$ 0.50

2. Mary has a standing order with Bluebell Greenhouses for 50 daffodil bulbs and 100 tulip bulbs every year. Create a new dictionary that stores this information.
3. Demand for tulips this year has dramatically outpaced demand. As a result, the price of tulip bulbs has increased by 25%. Update the price of tulip bulbs in the appropriate dictionary. (Round the price per bulb to 2 decimal places.)
4. This year, Mary would also like to try planting hyacinths. Add 30 hyacinth bulbs to the dictionary that is storing her order.
5. Display Mary's purchase order for this year on the screen. Each line should be formatted as follows:

bulb code	*	number of bulbs	=	\$	subtotal
field width: 5 left-aligned		field width: 4 right-aligned			field width: 6 right-aligned 2 decimal places

**Molecular Biology Techniques A Classroom Laboratory Manual** Fourth Edition is a must have collection of methods and procedures that create a single continuous comprehensive project that teaches students basic molecular techniques. It is an indispensable tool for introducing advanced undergraduates and beginning graduate students to the techniques of recombinant DNA technology or gene cloning and expression. The techniques used in basic research and biotechnology laboratories are covered in detail. Students gain hands on experience from start to finish in subcloning a gene into an expression vector through purification of the recombinant protein. The fourth edition is updated with new laboratory exercises designed for a typical 15 week semester rather than a 4 week intensive course. The project approach to experiments has been student and instructor tested for years; students still follow a cloning project through to completion culminating in the purification of recombinant protein. It takes advantage of the enhanced green fluorescent protein; students can actually visualize positive clones following IPTG induction. Student tested labs proven successful in a real classroom laboratory. Testbank included on companion website for additional testing and practice. Exercises simulate a cloning project that would be performed in a real research lab. Project approach to experiments gives students an overview of the entire process. Prep list appendix contains necessary recipes and catalog numbers providing staff with detailed instructions.      *Lab Manual for General, Organic & Biochemistry* Larry C. Byrd, Dr., Norman W. Hunter, Dr., Charles H. Henrickson, Dr., 2010-01-20

The seventh edition by Charles H. Henrickson, Larry C. Byrd, and Norman W. Hunter of Western Kentucky University offers clear and concise laboratory experiments to reinforce students' understanding of concepts. Pre-laboratory exercises, questions, and report sheets are coordinated with each experiment to ensure active student involvement and comprehension. An updated student tutorial on graphing with Excel has been added to this edition. **Laboratory Instructor's Manual** Written by Charles H. Henrickson, Larry C. Byrd, and Norman W. Hunter of Western Kentucky University, this helpful guide contains hints that the authors have learned over the years to ensure students' success in the laboratory. This Resource Guide is available through the Connect Chemistry website for this text.      *Laboratory Manual for Principles of General Chemistry* Jo Allan Beran, 2007-12-10

This collection of challenging experiments will help get readers up to speed on laboratory techniques, safety, and experimental procedures. Each experiment is presented with concise objectives, a comprehensive list of techniques, and detailed lab intros and step-by-step procedures. Beran also integrates numerous Dry Labs experiments that do not involve chemicals but reinforce the reader's knowledge of general chemistry topics such as nomenclature, oxidation numbers, and atomic and molecular structure.      **A Laboratory for General, Organic and Biochemistry** Charles H. experiments are included in this manual. They begin with the basics of measurement and

conclude with the chemistry of digestion Some experiments require more than one laboratory period Each is written as a self contained teaching and learning unit Though each experiment benefits from the supporting material presented in lecture sufficient information is provided to understand the laboratory activity The text features laboratory safety Each experiment

**Laboratory Manual for Chemistry** Nivaldo J. Tro, John J. Vincent, Erica J. Livingston, 2010-01-03 With a focus on real world applications and a conversational tone this laboratory manual contains 28 experiments written specifically to correspond with Chemistry A Molecular Approach Second Edition by Nivaldo J Tro Each experiment covers one or more topics discussed within a chapter of the textbook with the dual goal of 1 helping you understand the underlying concepts covered in the lecture course and 2 presenting this material in a way that is interesting and exciting This manual contains twenty eight experiments with a focus on real world applications Each experiment contains a set of pre laboratory questions an introduction a step by step procedure including safety information and a report section featuring post laboratory questions Additional features include a section on laboratory safety rules an overview on general techniques and equipment as well as a detailed tutorial on graphing data in Excel

**Laboratory Manual for Principles of General Chemistry** Jo Allan Beran, Mark Lassiter, 2022 The Laboratory Manual for Principles of General Chemistry has focused on the laboratory experience through each of its ten previous editions Realizing that all experimental conclusions are not the same each conclusion is dependent upon identifying an appropriate experimental procedure selecting the proper apparatus employing the proper techniques while systematically analyzing and interpreting the data and minimizing the inherent variables associated with the student scientist As a result of good data a scientific and analytical conclusion is made which may or may not be right but consistent with the data This approach has been prevalent throughout the previous ten editions of this manual
