Learning From Good And Bad Data:

Learning from Good and Bad Data Philip D. Laird, 2012-12-06 This monograph is a contribution to the study of the identification problem the problem of identifying an item from a known class using positive and negative examples This problem is considered to be an important component of the process of inductive learning and as such has been studied extensively In the overview we shall explain the objectives of this work and its place in the overall fabric of learning research Context Learning occurs in many forms the only form we are treating here is inductive learning roughly characterized as the process of forming general concepts from specific examples Computer Science has found three basic approaches to this problem Select a specific learning task possibly part of a larger task and construct a computer program to solve that task Study cognitive models of learning in humans and extrapolate from them general principles to explain learning behavior Then construct machine programs to test and illustrate these models xi XII PREFACE Formulate a mathematical theory to capture key features of the induction process This work belongs to the third category The various studies of learning utilize training examples data in different ways The three principal ones are Similarity based or empirical learning in which a collection of examples is used to select an explanation from a class of possible rules **Bad Data Handbook** Q. Ethan McCallum, 2012-11-07 What is bad data Some people consider it a technical phenomenon like missing values or malformed records but bad data includes a lot more In this handbook data expert Q Ethan McCallum has gathered 19 colleagues from every corner of the data arena to reveal how they've recovered from nasty data problems From cranky storage to poor representation to misguided policy there are many paths to bad data Bottom line Bad data is data that gets in the way This book explains effective ways to get around it Among the many topics covered you'll discover how to Test drive your data to see if it's ready for analysis Work spreadsheet data into a usable form Handle encoding problems that lurk in text data Develop a successful web scraping effort Use NLP tools to reveal the real sentiment of online reviews Address cloud computing issues that can impact your analysis effort Avoid policies that create data analysis roadblocks Take a systematic approach to data quality analysis **Inductive Logic Programming** Stephen Muggleton, 1992 Inductive logic programming is a new research area emerging at present Whilst inheriting various positive characteristics of the parent subjects of logic programming and machine learning it is hoped that the new area will overcome many of the limitations of its forbears This book describes the theory implementations and applications of Inductive Logic Programming Quality, Reliability and Maintenance 2004 G. J. McNulty, 2004-05-21 The papers included in this volume were presented at the 5th international conference on Quality Reliability and Maintenance which took place at the University of Oxford in April 2004 They highlight the importance of the QRM disciplines and represent the latest developments trends and progress and are essential reference material for all research academics quality planners maintenance executives and personnel who have the responsibility to implement the findings of quality audits and maintenance policy Quality Reliability and Maintenance be it

Bradbury, Guy Roberts-Holmes, 2017-10-02 *The Datafication of Primary and Early Years Education* explores and critically analyses the growing dominance of data in schools and early childhood education settings. Recognising the shift in practice and priorities towards the production and analysis of attainment data that are compared locally, nationally and internationally, this important book explores the role and impact of digital data in the data-obsessed school. Through insightful case studies, the book critiques policy priorities which facilitate and demand the use of attainment data within a neoliberal education system which is already heavily focused on assessment and accountability. Using an approach influenced by policy sociology and post-foundational frameworks, the book considers how data are productive of data-driven teacher and child subjectivities. The text explores how data have become an important part of making teachers' work visible within systems which are both disciplinary and controlling while often reducing the complexity of children's learning to single numbers. Key ideas covered include: The impact of data on the individual teacher and their pedagogical practice, particularly in play-based early years classrooms; The problems of collecting data through assessment of young children; How schools respond to increased pressure to produce the right data or how they play with numbers; How data affect children and teachers' identities; International governance and data comparison, including international comparison of young children's attainment; Private sector involvement in data processing and analysis. *The Datafication of Primary and Early Years Education* offers a unique insight into the links between data policy and practice and is a crucial read for all interested in the ways in which data are affecting teachers, practitioners and children.
