Learning Mathematics and Logo Celia Hoyles, Richard Noss, 1992 These original essays summarize a decade of fruitful research and curriculum development using the LISP derived language Logo They discuss a range of issues in the areas of curriculum learning and mathematics illustrating the ways in which Logo continues to provide a rich learning environment one that allows pupil autonomy within challenging mathematical settings Essays in the first section discuss the link between Logo and the school mathematics curriculum focusing on the ways in which pupils Logo activities relate to and are influenced by the ideas they encounter in the context of school algebra and geometry In the second section the contributions take up pedagogical styles and strategies They tackle such cognitive and metacognitive questions as What range of learning styles can the Logo setting accommodate How can teachers make sense of pupils preferred strategies And how can teachers help students to reflect on the strategies they are using Returning to the mathematical structures essays in the third section consider a variety of mathematical ideas drawing connections between mathematics and computing and showing the ways in which constructing Logo programs helps or does not help to illuminate the underlying mathematics Celia Hoyles is Professor of Mathematics Education at the Institute of Education University of London where Richard Noss is Chair of the Department of Mathematics Statistics and Computing

Volume 1: Research Syntheses M. Kathleen Heid, Glendon W. Blume, 2008-07-01 According to NCTM s Principles and Standards for School mathematics Technology is essential in teaching and learning of mathematics it influences the mathematics that is taught and it enhances students learning How does research inform this clarion call for technology in mathematics teaching and learning In response to the need to craft appropriate roles for technology in school mathematics new technological approaches have been applied to the teaching and learning of mathematics and these approaches have been examined by researchers world wide The first volume provides insight into what research suggests about the nature of mathematics learning in technological environments Included in this volume are syntheses of research on technology in the learning of rational number algebra elementary and secondary geometry mathematical modeling and calculus Additional chapters synthesize research on technology in the practice of teaching and on equity issues in the use of technology in mathematics instruction Instead of simply reporting achievement scores of students who use technology in their learning authors provide

thoughtful analyses of bodies of research with the goal of understanding the ways in which technology affects what and how students learn Each of the chapters in this volume is written by a team of experts whose own research has provided important guidance to the field

Mathematical Reasoning Lyn D. English, 2013-04-03 How we reason with mathematical ideas continues to be a fascinating and challenging topic of research particularly with the rapid and diverse developments in the field of cognitive science that have taken place in recent years Because it draws on multiple disciplines including psychology philosophy computer science linguistics and anthropology cognitive science provides rich scope for addressing issues that are at the core of mathematical learning Drawing upon the interdisciplinary nature of cognitive science this book presents a broadened perspective on mathematics and mathematical reasoning It represents a move away from the traditional notion of reasoning as abstract and disembodied to the contemporary view that it is embodied and imaginative From this perspective mathematical reasoning involves reasoning with structures that emerge from our bodily experiences as we interact with the environment these structures extend beyond finitary propositional representations Mathematical reasoning is imaginative in the sense that it utilizes a number of powerful illuminating devices that structure these concrete experiences and transform them into models for abstract thought These thinking tools analogy metaphor metonymy and imagery play an important role in mathematical reasoning as the chapters in this book demonstrate yet their potential for enhancing learning in the domain has received little recognition This book is an attempt to fill this void Drawing upon backgrounds in mathematics education educational psychology philosophy linguistics and cognitive science the chapter authors provide a rich and comprehensive analysis of mathematical reasoning New and exciting perspectives are presented on the nature of mathematics e g mind based mathematics on the array of powerful cognitive tools for reasoning e g analogy and metaphor and on the different ways these tools can facilitate mathematical reasoning Examples are drawn from the reasoning of the preschool child to that of the adult learner

EBOOK: Teaching for Learning Mathematics Ros Sutherland, 2006-12-16 Why do students find learning mathematics difficult Can anything be done about this What can we learn from mathematics lessons in which students are motivated to struggle with difficult mathematical ideas How can teachers make sense of the research which is available and use it to improve practice in real classrooms This book explores the factors that influence young people's learning of mathematics It uses a holistic socio culturally informed approach to show how all young people can be encouraged to engage with and learn mathematics Rich examples from classroom practice are used to connect theory and practice The role of mathematical tools including information and communications technologies is discussed A key focus of the book is the link between teaching and learning including different ways in which teachers can design and orchestrate mathematical learning environments This important accessible and relevant book is essential reading for student teachers of mathematics as well as all qualified mathematics teachers in secondary schools

Spencer,2017-09-11 What can research in cognitive psychology offer the growth of educational technology and instructional media Originally published in 1988 this book argues that for much of its history educational technology has been concerned with justifying and verifying the basic assumption that the processes and products of technology can improve instructional effectiveness The result is seen as a systems approach grounded in empiricism and the failure to incorporate much important research in cognitive psychology The book argues that it is now time for educational technology to come to terms with new ideas in cognitive and particularly constructivist psychology and it both advocates and describes the forging of new links between the two disciplines Reasoning, Communication and Connections in Mathematics Berinderjeet Kaur,Tin Lam
