National Library of Medicine Current Catalog National Library of Medicine (U.S.), ImageCLEF Henning Müller, Paul Clough, Thomas Deselaers, Barbara Caputo, 2010-08-20 The pervasive creation and consumption of content especially visual content is ingrained into our modern world We are constantly consuming visual media content in printed form and in digital form in work and in leisure pursuits Like our cave man forefathers we use pictures to record things which are of importance to us as memory cues for the future but nowadays we also use pictures and images to document processes we use them in engineering in art in science in medicine in entertainment and we also use images in advertising Moreover when images are in digital format either scanned from an analogue format or more often than not born digital we can use the power of our computing and networking to exploit images to great effect Most of the technical problems associated with creating compressing storing transmitting rendering and protecting image data are already solved We use accepted standards and have tremendous infrastructure and the only

outstanding challenges apart from managing the scale issues associated with growth are to do with locating images That involves analysing them to determine their content classifying them into related groupings and searching for images To overcome these challenges we currently rely on image metadata the description of the images they captured automatically at creation time or manually added afterwards
