## Lectures On Linear Logic:

**Lectures on Linear Logic** A. S. Troelstra, 2000      **Lectures on Linear Logic** Anne Sjerp Troelstra, 1992-05-01 The initial sections of this text deal with syntactical matters such as logical formalism cut elimination and the embedding of intuitionistic logic in classical linear logic Concluding chapters focus on proofnets for the multiplicative fragment and the algorithmic interpretation of cut elimination in proofnets      **Lectures on Linear Logic** A. S. Troelstra, 1990      On Intuitionistic Linear Logic G. M. Bierman, 1994      **Logical Foundations of Computer Science** S. I. Adian, 1997-05-28 A Sobolev gradient of a real valued functional is a gradient of that functional taken relative to the underlying Sobolev norm This book shows how descent methods using such gradients allow a unified treatment of a wide variety of problems in differential equations Equal emphasis is placed on numerical and theoretical matters Several concrete applications are made to illustrate the method These applications include 1 Ginzburg Landau functionals of superconductivity 2 problems of transonic flow in which type depends locally on nonlinearities and 3 minimal surface problems Sobolev gradient constructions rely on a study of orthogonal projections onto graphs of closed densely defined linear transformations from one Hilbert space to another These developments use work of Weyl von Neumann and Beurling      **Linear Logic** Jean-Yves Girard, 1993      **Lectures on Logic and Computation** Nick Bezhanishvili, Valentin Goranko, 2012-06-23 The European Summer School in Logic Language and Information ESSLLI is organized every year by the Association for Logic Language and Information FoLLI in different sites around Europe The main focus of ESSLLI is on the interface between linguistics logic and computation ESSLLI offers foundational introductory and advanced courses as well as workshops covering a wide variety of topics within the three areas of interest Language and Computation Language and Logic and Logic and Computation During two weeks around 50 courses and 10 workshops are offered to the attendants each of 1 5 hours per day during a five days week with up to seven parallel sessions ESSLLI also includes a student session papers and posters by students only 1 5 hour per day during the two weeks and four evening lectures by senior scientists in the covered areas The 6 course notes were carefully reviewed and selected The papers are organized in topical sections on computational complexity multi agent systems natural language processing strategies in games and formal semantics      *Learning Language in Logic* James Cussens, Saso Dzeroski, 2000-09-27 The two volume set LNCS 1842 1843 constitutes the refereed proceedings of the 6th European Conference on Computer Vision ECCV 2000 held in Dublin Ireland in June July 2000 The 116 revised full papers presented were carefully selected from a total of 266 submissions The two volumes offer topical sections on recognitions and modelling stereoscopic vision texture and shading shape structure from motion image features active real time and robot vision segmentation and grouping vision systems engineering and evaluation calibration medical image understanding and visual motion      An Introduction to Substructural Logics Greg Restall, 2002-09-11 This book introduces an important group of logics that have come to be known under the umbrella term substructural Substructural logics have independently led to

significant developments in philosophy computing and linguistics An Introduction to Substructural Logics is the first book to systematically survey the new results and the significant impact that this class of logics has had on a wide range of fields The following topics are covered Proof Theory Propositional Structures Frames Decidability Coda Both students and professors of philosophy computing linguistics and mathematics will find this to be an important addition to their reading

**Information Modelling and Knowledge Bases VIII** H. Kangassalo, 1997 Information modelling is the essential part of information systems design Design methods specification languages and tools tend to become application dependent aiming at integration of methodologies stretching from traditional database design to knowledge bases and including use of logical languages and process oriented reactive systems description The topics of the articles cover a wide variety of problems in the area of information modelling information systems specification and knowledge bases ranging from foundations and theories to systems construction and application studies The contributions are grouped into the following major categories Systems specification and information modelling schemes User interfaces and multimedia Knowledge organization database structuring Formal systems Knowledge and information From conceptual modelling to software engineering Description and organization of concepts and objects Learning systems and applications This book is the eighth volume in the sub series Information Modelling and Knowledge Bases This dates back to 1990 with annual publications now amounting to more than 200 reviewed articles The current volume is intended for researchers students and practitioners in the area of information systems

Aspects of Linear Logic Andrej Šcedrov, 1993 *The Theory of Quantaloids* K I Rosenthal, 1996-05-09 This book presents a detailed account of the theory of quantaloids a natural generalization of quantales The basic theory examples and construction are given and particular emphasis is placed on the free quantaloid construction as well as on the perspective provided by enriched categories

*Lectures on the Curry-Howard Isomorphism* Morten Heine Sørensen, Paweł Urzyczyn, 2006-07-04 The Curry Howard isomorphism states an amazing correspondence between systems of formal logic as encountered in proof theory and computational calculi as found in type theory For instance minimal propositional logic corresponds to simply typed lambda calculus first order logic corresponds to dependent types second order logic corresponds to polymorphic types sequent calculus is related to explicit substitution etc The isomorphism has many aspects even at the syntactic level formulas correspond to types proofs correspond to terms provability corresponds to inhabitation proof normalization corresponds to term reduction etc But there is more to the isomorphism than this For instance it is an old idea due to Brouwer Kolmogorov and Heyting that a constructive proof of an implication is a procedure that transforms proofs of the antecedent into proofs of the succedent the Curry Howard isomorphism gives syntactic representations of such procedures The Curry Howard isomorphism also provides theoretical foundations for many modern proof assistant systems e g Coq This book gives an introduction to parts of proof theory and related aspects of type theory relevant for the Curry Howard isomorphism It can serve as an introduction to any or both of typed lambda calculus and intuitionistic logic Key

features The Curry Howard Isomorphism treated as common theme Reader friendly introduction to two complementary subjects Lambda calculus and constructive logics Thorough study of the connection between calculi and logics Elaborate study of classical logics and control operators Account of dialogue games for classical and intuitionistic logic Theoretical foundations of computer assisted reasoning The Curry Howard Isomorphism treated as the common theme Reader friendly introduction to two complementary subjects lambda calculus and constructive logics Thorough study of the connection between calculi and logics Elaborate study of classical logics and control operators Account of dialogue games for classical and intuitionistic logic Theoretical foundations of computer assisted reasoning      Advances in Computing Science - ASIAN'98 Jieh Hsiang,Atsushi Ohori,2003-05-20 This book constitutes the refereed proceedings of the 4th Asian Computing Science Conference ASIAN 98 held in Manila The Philippines in December 1998 The 17 revised full papers presented were carefully reviewed and selected from a total of 43 submissions Also included are a few invited contributions Among the topics covered are automated deduction proof theory rewriting systems program semantics distributed processing algorithms and graph theoretical aspects      *Lexical Matters* Anna Szabolcsi,Ivan Sag,1992-06 This volume contains new research on the lexicon and its relation to other aspects of linguistics These essays put forth empirical arguments to claim that specific theoretical assumptions concerning the lexicon play a crucial role in resolving problems pertaining to other components of grammar Topics include syntactic semantic interface in the areas of aspect argument structure and thematic roles lexicon based accounts of quirky case anaphora and control the boundary between the lexicon and syntax in the domains of sentence comprehension and nominal compounding and the possibility of extending the concept of blocking beyond the traditional lexicon Ivan Sag is a professor of linguistics at Stanford University Anna Szabolcsi is an associate professor of linguistics at UCLA      **Basic Proof Theory** A. S. Troelstra,H. Schwichtenberg,2000-07-27 This introduction to the basic ideas of structural proof theory contains a thorough discussion and comparison of various types of formalization of first order logic Examples are given of several areas of application namely the metamathematics of pure first order logic intuitionistic as well as classical the theory of logic programming category theory modal logic linear logic first order arithmetic and second order logic In each case the aim is to illustrate the methods in relatively simple situations and then apply them elsewhere in much more complex settings There are numerous exercises throughout the text In general the only prerequisite is a standard course in first order logic making the book ideal for graduate students and beginning researchers in mathematical logic theoretical computer science and artificial intelligence For the new edition many sections have been rewritten to improve clarity new sections have been added on cut elimination and solutions to selected exercises have been included

**Handbook of Tableau Methods** M. D'Agostino,Dov M. Gabbay,Reiner Hähnle,J. Posegga,2013-03-09 Recent years have been blessed with an abundance of logical systems arising from a multitude of applications A logic can be characterised in many different ways Traditionally a logic is presented via the following three components 1 an intuitive non formal

motivation perhaps tie it in to some application area 2 a semantical interpretation 3 a proof theoretical formulation There are several types of proof theoretical methodologies Hilbert style Gentzen style goal directed style labelled deductive system style and so on The tableau methodology invented in the 1950s by Beth and Hintikka and later perfected by Smullyan and Fitting is today one of the most popular since it appears to bring together the proof theoretical and the semantical approaches to the pre of a logical system and is also very intuitive In many universities it is sensation the style first taught to students Recently interest in tableaux has become more widespread and a community crystallised around the subject An annual tableaux conference is being held and proceedings are published The present volume is a Handbook a Tableaux presenting to the community a wide coverage of tableaux systems for a variety of logics It is written by active members of the community and brings the reader up to frontline research It will be of interest to any formal logician from any area

**Interactive Theorem Proving** Sandrine Blazy,Christine Paulin-Mohring,David Pichardie,2013-07-22 This book constitutes the refereed proceedings of the 4th International Conference on Interactive Theorem Proving ITP 2013 held in Rennes France in July 2013 The 26 regular full papers presented together with 7 rough diamond papers 3 invited talks and 2 invited tutorials were carefully reviewed and selected from 66 submissions The papers are organized in topical sections such as program verification security formalization of mathematics and theorem prover development Formal Ontology in Information Systems P. Garbacz,O. Kutz,2014-09-05 Formal Ontology in Information Systems FOIS is the flagship conference of the International Association for Ontology and its Applications IAOA Its interdisciplinary research focus lies at the intersection of philosophical ontology linguistics logic cognitive science and computer science as well as in the applications of ontological analysis to conceptual modeling knowledge engineering knowledge management information systems development library and information science scientific research and semantic technologies in general As in previous years FOIS 2014 was a nexus of interdisciplinary research and communication The current proceedings is divided into four main sections dealing with foundations processes agency and dispositions methods and tools and applications The last of these covers a broad spectrum of areas including in particular biology and medicine engineering and economy For the first time in its history the conference hosted a special track an ontology competition the aim of which was to encourage authors to make their ontologies publicly available and to allow them to be evaluated according to a set of predetermined criteria Papers discussing these ontologies can also be found in this volume The book will be of interest to all those whose work involves the application of ontologies and who are looking for a current overview of developments in formal ontology Petri Nets for Systems Engineering Claude Girault,Rüdiger Valk,2013-03-14 Formal methods for the specification and verification of hardware and software systems are becoming more and more important as systems increase in size and complexity The aim of the book is to illustrate progress in formal methods based on Petri net formalisms It contains a collection of examples arising from different fields such as flexible manufacturing telecommunication and workflow management systems The book

covers the main phases in the life cycle of design and implementation of a system i.e specification model checking techniques for verification analysis of properties code generation and execution of models These techniques and their tool support are discussed in detail including practical issues Amongst others fundamental concepts such as composition abstraction and reusability of models model verification and verification of properties are systematically introduced
