Bash Scripting John Bach, 2020-09-11 Bash Scripting Think of a script for a play or a movie or a TV show The script tells the actors what they should say and do A script for a computer tells the computer what it should do or say In the context of Bash scripts we are telling the Bash shell what it should do A Bash script is a plain text file which contains a series of commands These commands are a mixture of commands we would normally type ourselves on the command line such as `ls` or `cp` for example and commands we could type on the command line but generally wouldn't you'll discover these over the next few pages An important point to remember though is Anything you can run normally on the command line can be put into a script and it will do exactly the same thing Similarly anything you can put into a script can also be run normally on the command line and it will do exactly the same thing You don't need to change anything Just type the commands as you would normally and they will behave as they would normally It's just that instead of typing them at the command line we are now entering them into a plain text file In this sense if you know how to do stuff at the command line then you already know a fair bit in terms of Bash scripting It is convention to give files that are Bash scripts an extension of `sh` `myscript.sh` for example As you would be aware and if you're not maybe you should consider

reviewing our Linux Tutorial Linux is an extensionless system so a script doesn't necessarily have to have this characteristic in order to work

**Learning Bash Shell Scripting Gently** Liza Noble, Sujata Biswas, 2021-07-19 With the automation menace hovering over us it is imperative that we equip ourselves with skills that can preserve our jobs for the years to come Competition will be tough IT Industry experts express concern that 60% of IT workers may lose their jobs However it is not that we don't face challenges now After a certain age the ability to absorb new skills gradually diminishes it wouldn't have mattered say 20 years back But now experienced folks are not seen as assets in a company but merely as units for which the company pays a certain amount of money The prevailing idea is why not get the job done by a fresher intern from a College There will be a dip in quality but that's ok In such a scenario it becomes important that we bring value to our jobs by learning new technologies and if they don't appreciate it then well we can always search for greener pastures Shell Scripting in Linux is my response to the threat of automation Let's confront the fears that haunt us and get on with it I am sure we can ride this so called wave of automation with better skills and better quality of life for our families
