AI and Human Thought and Emotion Sam Freed, 2019-07-11 The field of artificial intelligence AI has grown dramatically in recent decades from niche expert systems to the current myriad of deep machine learning applications that include personal assistants natural language interfaces and medical financial and traffic management systems This boom in AI engineering masks the fact that all current AI systems are based on two fundamental ideas mathematics logic and statistics from the 19th century and a grossly simplified understanding of biology mainly neurons as understood in 1943 This book explores other fundamental ideas that have the potential to make AI more anthropomorphic Most books on AI are technical and do not consider the humanities Most books in the humanities treat technology in a similar manner AI and Human Thought and Emotion however is about AI how academics researchers scientists and practitioners came to think about AI the way they do and how they can think about it afresh with a humanities based perspective The book walks a middle line to share insights between the humanities and technology It starts with philosophy and the history of ideas and goes all the way to usable algorithms Central to this work are the concepts of introspection which is how consciousness is viewed and consciousness which is accessible to humans as they reflect on their own experience The main argument of this book is that AI based on introspection and emotion can produce more human like AI To discover the connections among emotion introspection and AI the book travels far from technology into the humanities and then returns with concrete examples of new algorithms At times philosophical historical and technical this exploration of human emotion and thinking poses questions and provides answers about the future of AI
