Starting Inquiry-based Science in the Early Years Sue Dale Tunnicliffe, 2015-07-16 Young children are intuitive scientists. This book builds on their inherent curiosity and problem solving as they move forward in their scientific thinking. Science develops from early beginnings and a solid foundation in the early years is essential for their future learning and engagement with the subject. *Starting Inquiry Based Science in the Early Years* shows you how you can support children's emerging scientific skills by working with them and scaffolding their inquiries as they experiment, hypothesise and investigate, building on their natural curiosity. Full of practical advice, it offers a wide range of scientific activities that can be carried out in partnership with young children. Each activity presents a challenge for the child to solve by thinking and talking through their ideas and then carrying out their own investigations. This invaluable guide focuses on helping children to follow their own line of inquiry and supporting them in mastering the skills and vocabulary they need in order to do this. Features include: An explanation of the key skills children need to acquire and practical ideas for developing these. Useful lists of relevant vocabulary and everyday resources. Cue questions to encourage children's thinking skills. Cross-curricular links to show how the activities support early literacy and mathematics. Early Years Science Education Mike Watts, Alison Silby, 2020-04-28 The educational provision for early years is growing and changing across many parts of the world not least in the UK While this book leans heavily on the mounting literature on early child development in its broadest sense physically emotionally linguistically its central focus lies squarely on the growth of children s scientific thinking and activities Written by educators this book is based both on formal educational research and professional practice in action The authors describe children s science concept development their curiosity driven exploration emergent ecological literacy their learning through science play the assessment of early learning the role of parents and practitioners within early education contexts and some question the very basis of the science being taught Illustrations and examples of practice are not confined to the UK though the messages to be derived from each chapter have application way beyond the immediate context This book was originally published as a special issue of Early Child Development and Care

Constructing Science Deena Skolnick Weisberg, David M. Sobel, 2022-09-20 An examination of children s causal reasoning capacities and how those

capacities serve as the foundation of their scientific thinking Young children have remarkable capacities for causal reasoning which are part of the foundation of their scientific thinking abilities In *Constructing Science* Deena Weisberg and David Sobel trace the ways that young children s sophisticated causal reasoning abilities combine with other cognitive metacognitive and social factors to develop into a more mature set of scientific thinking abilities Conceptualizing scientific thinking as the suite of skills that allows people to generate hypotheses solve problems and explain aspects of the world Weisberg and Sobel argue that understanding how this capacity develops can offer insights into how we can become a more scientifically literate society Investigating the development of causal reasoning and how it sets the stage for scientific thinking in the elementary school years and beyond Weisberg and Sobel outline a framework for understanding how children represent and learn causal knowledge and identify key variables that differ between causal reasoning and scientific thinking They present empirical studies suggesting ways to bridge the gap between causal reasoning and scientific thinking focusing on two factors contextualization and metacognitive thinking abilities Finally they examine children s explicit understanding of such concepts as science learning play and teaching

Feeney, Scholastic, Inc. Staff, 1998-06 *Inspiring Science in the Early Years: Exploring Good Practice* Lois Kelly, Di Stead, 2015-02-16 This book explores the science inherent in good early years practice and provides a rich range of ideas to inspire you to have a go in your setting. It provides a balance between theory which underpins good practice and plenty of ideas of how you might put the theory into practice. With a focus on how children learn about the world they live in and activities intended to develop scientific understanding, the book offers an holistic approach with key topics including How children construct scientific meaning, Tuning into children's initial scientific understanding, How play supports the development of children's science ideas, Providing a rich environment for learning early years science, Developing children's scientific experiences. This handy guide is ideal to support you if you are studying on an early years course or if you are an established early years professional who wishes to enrich early scientific learning in your setting. Lois Kelly and Di Stead are Education Consultants specializing in primary science. This clearly written and engaging book examines Science in the Early Years through a variety of activities including role play, toys and technology. The vital importance of sensory experiences and language is emphasized throughout. The wide experience and knowledge of the authors guarantees a highly enjoyable read. The links to all curricula in the UK are extremely beneficial and I particularly liked the way that photographs and Key Points text boxes have been used throughout the book. The breadth and depth of writing about science makes this a highly desirable book for any practitioner working or studying in the Early Years. Kathy Brodie, Independent Early Years Consultant. As an Early Years consultant who is passionate about children's thinking, exploring, questioning, investigating and most of all engaging, I really enjoyed this book. I especially liked it because it provokes practitioners to think about science as the discovery and exploration of the world around us and not just as a National Curriculum subject. The mix of authors, their writing styles and the content of each chapter makes it a really easy and engaging read. Definitely one to add to your reading list if you work with children in the Early Years. Alistair Bryce Clegg, Early Years Consultant. As the title suggests, this book from the first page onwards inspires the reader to learn more about how to develop, enhance and incorporate effective practice in science in the early years. In addition to developing an understanding of how to approach the teaching of science, it gives a clearly articulated and accessible theoretical insight into how young children learn. To compliment this, there are points of reflection, case studies, practical tasks and examples from the field. This is a valuable book for both students and practitioners alike as it goes beyond just giving suggestions for what to do; it explains the why and the how as well. Joanne McNulty, Manchester Metropolitan University. This is a warm, accessible book strongly grounded in research. It interweaves real-life examples of science in the early years with underlying pedagogic principles and inspires new possibilities. The enthusiasm of the authors is contagious. Kendra McMahon, Bath Spa University. *Preparing Informal Science Educators* Patricia G. Patrick, 2017-01-16 This book provides a diverse look at various aspects of preparing informal science educators. Much has been published about the importance of preparing formal classroom educators, but little has been written about the

importance need and best practices for training professionals who teach in aquariums camps parks museums etc The reader will find that as a collective the chapters of the book are well related and paint a clear picture that there are varying ways to approach informal educator preparation but all are important The volume is divided into five topics Defining Informal Science Education Professional Development Designing Programs Zone of Reflexivity The Space Between Formal and Informal Educators and Public Communication The authors have written chapters for practitioners researchers and those who are interested in assessment and evaluation formal and informal educator preparation gender equity place based education professional development program design reflective practice and science communication Readers will draw meaning and usefulness from the array of professional perspectives and be stimulated to begin a quest to scaffold programs and professional development around the frameworks described in this book
