*Green* Michel Pastoureaux,2023-06-13 In this beautiful and richly illustrated book the acclaimed author of *Blue and Black* presents a fascinating and revealing history of the color green in European societies from prehistoric times to today Examining the evolving place of green in art clothes literature religion science and everyday life Michel Pastoureaux traces how culture has profoundly changed the perception and meaning of the color over millennia and how we misread cultural social and art history when we assume that colors have always signified what they do today Filled with entertaining and enlightening anecdotes *Green* shows that the color has been ambivalent a symbol of life luck and hope but also disorder greed poison and the devil Chemically unstable green pigments were long difficult to produce and even harder to fix Not surprisingly the color has been associated with all that is changeable and fleeting

childhood love and money Only in the Romantic period did green definitively become the color of nature Pastoureau also explains why the color was connected with the Roman emperor Nero how it became the color of Islam why Goethe believed it was the color of the middle class why some nineteenth century scholars speculated that the ancient Greeks couldn't see green and how the color was denigrated by Kandinsky and the Bauhaus More broadly Green demonstrates that the history of the color is to a large degree one of dramatic reversal long absent ignored or rejected green today has become a ubiquitous and soothing presence as the symbol of environmental causes and the mission to save the planet With its striking design and compelling text Green will delight anyone who is interested in history culture art fashion or media

**Primate Research and Conservation in the Anthropocene** Alison M. Behie, Julie A. Teichroeb, Nicholas Malone, 2019-01-31 This book takes a new approach to understanding primate conservation research adding a personal perspective to allow readers to learn what motivates those doing conservation work When entering the field over a decade ago many young primatologists were driven by evolutionary questions centered in behavioural ecology However given the current environment of cascading extinctions and increasing threats to primates we now need to ensure that primates remain in viable populations in the wild before we can simply engage in research in the context of pure behavioural ecology This has changed the primary research aims of many primatologists and shifted our focus to conservation priorities such as understanding the impacts of human activity habitat conversion or climate change on primates This book presents personal narratives alongside empirical research results and discussions of strategies used to stem the tide of extinction It is a must have for anyone interested in conservation research
