Grid Computing Making The Global Infrastructure A Reality:

Grid Computing Fran Berman, Geoffrey Fox, Anthony J. G. Hey, 2003-04-18 Grid computing is applying the resources of many computers in a network to a single problem at the same time Grid computing appears to be a promising trend for three reasons 1 Its ability to make more cost effective use of a given amount of computer resources 2 As a way to solve problems that can't be approached without an enormous amount of computing power 3 Because it suggests that the resources of many computers can be cooperatively and perhaps synergistically harnessed and managed as a collaboration toward a common objective A number of corporations professional groups university consortiums and other groups have developed or are developing frameworks and software for managing grid computing projects The European Community EU is sponsoring a project for a grid for high energy physics earth observation and biology applications In the United States the National Technology Grid is prototyping a computational grid for infrastructure and an access grid for people Sun Microsystems offers Grid Engine software Described as a distributed resource management tool Grid Engine allows engineers at companies like Sony and Synopsys to pool the computer cycles on up to 80 workstations at a time the Grid is a very hot topic generating broad interest from research and industry e.g. IBM Platform Avaki Entropia Sun HP Grid architecture enables very popular e Science projects like the Genome project which demand global interaction and networking In recent surveys over 50% of Chief Information Officers are expected to use Grid technology this year Grid Computing Features contributions from the major players in the field Covers all aspects of grid technology from motivation to applications Provides an extensive state of the art guide in grid computing This is essential reading for researchers in Computing and Engineering physicists statisticians engineers and mathematicians and IT policy makers

Grid Computing: Software Environments and Tools

Omer F. Rana, Jose Cardoso

Cunha,2007-07-03 Grid Computing requires the use of software that can divide and farm out pieces of a program to as many as several thousand computers This book explores processes and techniques needed to create a successful Grid infrastructure Leading researchers in Europe and the US look at the development of specialist tools and environments which will encourage the convergence of the parallel programming distributed computing and data management communities Specific topics covered include An overview of structural and behavioural properties of Computer Grid applications Discussion of alternative programming techniques Case studies displaying the potential of Computer Grids in solving real problems This book is unique in its outline of the needs of Computational Grids both in integration of high end resources using OGSA Globus and the loose integration of Peer 2 Peer Entropia United Devices Readers will gain an insight on the limitations of existing approaches as well as the standardisation activities currently taking place *Handbook of Research on Computational Grid Technologies for Life Sciences, Biomedicine, and Healthcare* Cannataro, Mario,2009-05-31 This book provides methodologies and developments of grid technologies applied in different fields of life sciences Provided by publisher **Fundamentals of Grid Computing** Frederic Magoules,2009-12-23 The integration and convergence of state of the art technologies in the grid have enabled more flexible automatic and complex grid services to fulfill industrial and commercial needs from the LHC at CERN to meteorological forecasting systems Fundamentals of Grid Computing Theory Algorithms and Technologies discusses how the novel technologies *Grid Computing: The New Frontier of High Performance Computing* Lucio Grandinetti,2005-11-15 The book deals with the most recent technology of distributed computing As Internet continues to grow and provide practical connectivity between users of computers it has become possible to consider use of computing resources which are far apart and connected by Wide Area Networks Instead of using only local computing power it has become practical to access computing resources widely distributed In some cases between different countries in other cases between different continents This idea of using computer power is similar to the well known electric power utility technology Hence the name of this distributed computing technology is the Grid Computing Initially grid computing was used by technologically advanced scientific users They used grid computing to experiment with large scale problems which required high performance computing facilities and collaborative work In the next stage of development the grid computing technology has become effective and economically attractive for large and medium size commercial companies It is expected that eventually the grid computing style of providing computing power will become universal reaching every user in industry and business Written by academic and industrial experts who have developed or used grid computing Many proposed solutions have been tested in real life applications Covers most essential and technically relevant issues in grid computing *Network and Parallel Computing* Hai Jin,Daniel Reed,Wenbin Jiang,2005-11-24 These proceedings contain the papers presented at the 2005 IFIP International Conference on Network and Parallel Computing NPC 2005 held in Beijing China between November 30 and December 3 2005 The goal of the conference was to establish an

international forum for engineers and scientists to present their ideas and experiences in network and parallel computing A total of 320 submissions were received in response to our Call for Papers These papers were from the following countries or regions Australia Canada China France Germany Hong Kong India Iran Italy Japan Korea Luxembourg Nepal Netherlands Taiwan United Arab Emirates and United States Each submission was sent to at least three reviewers Each paper was judged according to its originality innovation readability and relevance to the expected audience Based on the reviews received a total of 68 papers were retained for inclusion in the proceedings Among the 68 papers 48 were accepted as full papers for presentation at the conference We also accepted 20 papers as short papers for a possible brief presentation at the conference followed by discussion during a poster session Thus only 21% of the total submissions could be included in the national program

Biomedical Informatics for Cancer Research Michael F. Ochs, John T. Casagrande, Ramana V. Davuluri, 2010-04-06 view showing that multiple molecular pathways must be affected for cancer to develop but with different specific proteins in each pathway mutated or differentially expressed in a given tumor The Cancer Genome Atlas Research Network 2008 Parsons et al 2008 Different studies demonstrated that while widespread mutations exist in cancer not all mutations drive cancer development Lin et al 2007 This suggests a need to target only a deleterious subset of aberrant proteins since any treatment must aim to improve health to justify its potential side effects Treatment for cancer must become highly individualized focusing on the specific aberrant driver proteins in an individual This drives a need for informatics in cancer far beyond the need in other diseases For instance routine treatment with statins has become widespread for minimizing heart disease with most patients responding to standard doses Wilt et al 2004 In contrast standard treatment for cancer must become tailored to the molecular phenotype of an individual tumor with each patient receiving a different combination of therapeutics aimed at the specific aberrant proteins driving the cancer Tracking the aberrations that drive cancers identifying biomarkers unique to each individual for molecular level diagnosis and treatment response monitoring adverse events and complex dosing schedules and providing annotated molecular data for ongoing research to improve treatments comprise a major biomedical informatics need
