Expert Knowledge and Its Application in Landscape Ecology Ajith H. Perera,C. Ashton Drew,Chris J. Johnson,2011-10-21 Typically landscape ecologists use empirical observations to conduct research and devise solutions for applied problems in conservation and management In some instances they rely on advice and input of experienced professionals in both developing and applying knowledge Given the wealth of expert knowledge and the risks of its informal and implicit applications in landscape ecology it is necessary to formally recognize and characterize expert knowledge and bring rigor to methods for its applications In this context the broad goal of this book is to introduce the concept of expert knowledge and examine its role in landscape ecological applications We plan to do so in three steps First we introduce the topic to landscape ecologists explore salient characteristics of experts and expert knowledge and describe methods used in capturing and formalizing that knowledge Second we present examples of research in landscape ecology from a variety of ecosystems and geographic locations that formally incorporate expert knowledge These case studies address a range of topics that will interest landscape ecologists and other resource management and conservation professionals including the specific roles of expert knowledge in developing testing parameterizing and applying models estimating the uncertainty in expert knowledge developing methods of formalizing and incorporating expert knowledge and using expert knowledge as competing models and a source of alternate hypotheses Third we synthesize the state of knowledge on this topic and critically examine the advantages and disadvantages of incorporating expert knowledge in landscape ecological applications The disciplinary subject areas we address are broad and cover much of the scope of contemporary landscape ecology including broad scale forest management and conservation quantifying forest disturbances and succession conservation of habitats for a range of avian and mammal species vulnerability and conservation of marine ecosystems and the spread and impacts of invasive plants This text incorporates the collective experience and knowledge of over 35 researchers in landscape ecology representing a diverse range of disciplinary subject areas and geographic locations Through this text we will catalyze further thought and investigations on expert knowledge among the target readership of researchers practitioners and graduate students in landscape ecology *Ecology Abstracts* ,1994 Proceedings of the Second Biennial Conference on University Education in Natural Resources ,1998 **Ecology and Resource Management** Kenneth E.
