Ecology and Evolution of Communities Martin L. Cody, Jared M. Diamond, 1975 The Theory of Ecological Communities Mark Vellend, 2020-09-15 A plethora of different theories models and concepts make up the field of community ecology Amid this vast body of work is it possible to build one general theory of ecological communities What other scientific areas might serve as a guiding framework As it turns out the core focus of community ecology understanding patterns of diversity and composition of biological variants across space and time is shared by evolutionary biology and its very coherent conceptual framework population genetics theory The Theory of Ecological Communities takes this as a starting point to pull together community ecology's various perspectives into a more unified whole Mark Vellend builds a theory of ecological communities based on four overarching processes selection among species drift dispersal and speciation These are analogues of the four central processes in population genetics theory selection within species drift gene flow and mutation and together they subsume almost all of the many dozens of more specific models built to describe the dynamics of communities of interacting species The result is a theory that allows the effects of many low level processes such as competition facilitation predation disturbance stress succession colonization and local extinction to be understood as the underpinnings of high level processes with widely applicable consequences for ecological communities Reframing the numerous existing ideas in community ecology The Theory of Ecological Communities provides a new way for thinking about biological composition and diversity

Ecological Communities Takayuki Ohgushi, Timothy P. Craig, Peter W. Price, 2007-01-04 Food webs examine the interactions between organisms to explain ecosystem community structure This book argues how food webs alone cannot depict a true picture of a community It shows that examining other indirect interactions between organisms can help us to better understand the structure and organisation of communities and ecosystems

Communities and Ecosystems David A. Wardle, 2002-05-12 Soil Primate Communities J. G. Fleagle, Charles Janson, Kaye Reed, 1999-10-14 Comprehensive and unique volume exploring the differences and similarities between primate communities worldwide

Hybrid Communities Charles Stépanoff, Jean-Denis Vigne, 2018-08-06 Domestication challenges our understanding of human environment relationships because it blurs the dichotomy between what is artificial and what is natural In domestication biological evolution environmental change techniques and practices anthropological trajectories and sociocultural choices are inextricably interconnected Domestication is essentially a hybrid phenomenon that needs to be explored with hybrid scientific approaches Hybrid Communities Biosocial Approaches to Domestication and Other Trans species Relationships attempts for the first time to explore domestication viewed from across disciplines both in its origins and as an ongoing process This edited collection proposes new biosocial approaches and concepts which integrate the methods of social

sciences archaeology and biology to shed new light on domestication in diachrony and in synchrony This book will be of great interest to all scholars working on human environment relationships and should also attract readers from the fields of social anthropology archaeology genetics ecology botany zoology history and philosophy *Diversity and Stability in Aquatic Plant Communities* Igor Zelnik, Mateja Germ, Rui Pedro Rivaes, 2025-08-08 Aquatic plant communities are crucial components of freshwater ecosystems often governing the ecological equilibrium and functionality of rivers streams and wetlands They encompass a diverse range of submerged emergent and floating plants supporting the overall balance and resilience of aquatic ecosystems They play a key role in various ecological and environmental contexts including ecosystem stability and the global carbon cycle as well as providing vital habitats for a diverse range of organisms Several factors shape the aquatic ecosystems ranging from light depth temperature of the water water flow and biotic factors to other external stressors that have over time modified the tolerance and presence of these communities Further research is required to shed light on the impact of increasing environmental changes and the need for a thorough understanding of how aquatic plant communities respond to such alterations The main goal of this Research Topic is to examine the complexities of aquatic plant communities and their dynamic interactions with different environmental factors We aim to explore aquatic plant functional diversity and compare its potential to reveal these interactions We also hope to investigate interactions between plants and other biological elements as well as how they cope with biological invasions Another goal is to examine the diverse responses of wetland vegetation to expected changes in the environmental factors driven by climate change We encourage scientists to submit their insights into the adaptive strategies of these communities Ultimately we hope to enhance our understanding of the ecological roles played by aquatic plants and to encourage effective conservation and management strategies for these vital ecosystems

Positive Interactions and Interdependence in Plant Communities Ragan M. Callaway, 2007-08-28 Positive interactions and interdependence in plant communities offers a new look at an old problem the nature of the communities This book marshals ecological literature from the last century on facilitation to make the case against the widely accepted individualistic notion of community organization Clearly many species in many communities would not be present without the ameliorating effects of other species In other words communities are not produced only by summing the population ecology of species Concepts covered include the idea that positive interactions are more prevalent in physically stressful conditions species specificity in facilitative interactions indirect facilitative interactions how facilitation contributes to diversity ecosystem function relationships and potential evolutionary aspects of positive interactions Root-associated Fungal Communities: Critical Linkages between Plants and Soil Rodica Pena, 2024-02-07 This research highlights the vital but often overlooked role of soil fungi in forest ecosystems focusing on their impact on nutrient cycles carbon storage and plant growth It delves into how these fungi especially those connected to plant roots contribute to the overall health and productivity of forests The study breaks new ground by examining how changes in the environment influenced by factors like

climate change and forest management practices affect these fungi and the essential services they provide The investigation is structured into three main parts exploring the diversity and makeup of root associated fungal communities using advanced infrared spectroscopy to uncover new fungal traits and studying fungi s roles in carbon cycling and plant nutrition Utilizing cutting edge molecular techniques and large ecological databases the researchers uncover the complex interactions between fungi their environment and plant hosts demonstrating how these relationships are crucial for ecosystem resilience and productivity Key findings reveal that the diversity and structure of fungal communities are crucial for maintaining forest health particularly in the face of environmental stressors The study advocates for forest management strategies that promote fungal diversity to enhance ecosystem services highlighting the importance of fungi in sustaining forest ecosystems and their potential in mitigating the impacts of climate change This work sets the stage for future research into the intricate relationships between fungi forests and global ecological cycles emphasizing the need for a deeper understanding of these critical but underappreciated organisms

Communities Surviving Migration James P. Robson, Dan Klooster, Jorge Hernández-Díaz, 2018-10-26 Out migration might decrease the pressure of population on the environment but what happens to the communities that manage the local environment when they are weakened by the absence of their members In an era where community based natural resource management has emerged as a key hope for sustainable development this is a crucial question Building on over a decade of empirical work conducted in Oaxaca Mexico *Communities Surviving Migration* identifies how out migration can impact rural communities in strongholds of biocultural diversity It reflects on the possibilities of community self governance and survival in the likely future of limited additional migration and steady but low rural populations and what different scenarios imply for environmental governance and biodiversity conservation In this way the book adds a critical cultural component to the understanding of migration environment linkages specifically with respect to environmental change in migrant sending regions Responding to the call for more detailed analyses and reporting on migration and environmental change especially in contexts where rural communities livelihoods and biodiversity are interconnected this volume will be of interest to students and scholars of environmental migration development studies population geography and Latin American studies

Invading Ecological Networks Cang Hui, David Richardson, 2022-01-13 Until now biological invasions have been conceptualised and studied mainly as a linear process from introduction to establishment to spread This volume charts a new course for the field drawing on key developments in network ecology and complexity science It defines an agenda for Invasion Science 2.0 by providing new framings and classification of research topics and by offering tentative solutions to vexing problems In particular it conceptualises a transformative ecosystem as an open adaptive network with critical transitions and turnover with resident species heuristically learning and fine tuning their niches and roles in a multiplayer eco evolutionary game It erects signposts pertaining to network interactions structures stability dynamics scaling and invasibility It is not a recipe book or a road map

Monitoring Threatened Species and Ecological Communities**

Sarah Legge,Natasha Robinson,David Lindenmayer,Benjamin Scheele,Darren Southwell,Brendan Wintle,2018-01-20

Monitoring is integral to all aspects of policy and management for threatened biodiversity It is fundamental to assessing the conservation status and trends of listed species and ecological communities Monitoring data can be used to diagnose the causes of decline to measure management effectiveness and to report on investment It is also a valuable public engagement tool Yet in Australia monitoring threatened biodiversity is not always optimally managed Monitoring Threatened Species and Ecological Communities aims to improve the standard of monitoring for Australia s threatened biodiversity It gathers insights from some of the most experienced managers and scientists involved with monitoring programs for threatened species and ecological communities in Australia and evaluates current monitoring programs establishing a baseline against which the quality of future monitoring activity can be managed Case studies provide examples of practical pathways to improve the quality of biodiversity monitoring and guidelines to improve future programs are proposed This book will benefit scientists conservation managers policy makers and those with an interest in threatened species monitoring and management

Transitioning to Sustainable Cities and Communities Hubert Klumpner,Klearjos Eduardo Papanicolaou,Georgeen Theodore,2024-11-14 In developing alternative approaches to urban development in response to the societal challenge of living in ever expanding cities this Volume on the SDG11 Sustainable Cities and Communities proposes the concept of an Urbanising Earth We question the dominant model of Western cities and their resultant global warming leading to the replacement of natural environments with artificial ones The Volume features over twenty practical and metaphorical cases from experienced practitioners to emerging design thinkers each of whom offer interconnected reflections on the research design and implementation of projects anchored in architecture and design arguments promoting a more balanced view of the built and natural environment These reflections designed to engage readers highlight the collective effort needed for sustainable urban development The Volume aims to facilitate design as a learning process for society to reconcile human and environmental rights while celebrating the art of cultivating and living in this urban age The right to education and housing can create synergies providing parks and public spaces to underprivileged neighbourhoods The overall aim is to connect thinking with actions while considering what modernism in architecture and urban planning is today In doing this the Volume sheds light on the condition of contemporary design itself We draw from limitless approaches to the fundamental challenges and critical discussions presented to us by this Urbanising Earth Plant Communities and Their Environment Manuel Oliveira,Anabela Fernandes-Silva,Feyza Candan,2020-09-09 This book presents different perspectives on how to understand the complex interaction between plants and the environment Plant communities adapt to biotic and abiotic stresses with different mechanisms and understanding these phenomena provides the means to better manage our environment and to

Scale, Heterogeneity, and the Structure and Diversity of Ecological

Communities Mark E. Ritchie, 2009-09-28 Understanding and predicting species diversity in ecological communities is one of the great challenges in community ecology. Popular recent theory contends that the traits of species are neutral or unimportant to coexistence, yet abundant experimental evidence suggests that multiple species are able to coexist on the same limiting resource precisely because they differ in key traits such as body size, diet, and resource demand. This book presents a new theory of coexistence that incorporates two important aspects of biodiversity in nature: scale and spatial variation in the supply of limiting resources. Introducing an innovative model that uses fractal geometry to describe the complex physical structure of nature, Mark Ritchie shows how species traits, particularly body size, lead to spatial patterns of resource use that allow species to coexist. He explains how this criterion for coexistence can be converted into a rule for how many species can be packed into an environment given the supply of resources and their spatial variability. He then demonstrates how this rule can be used to predict a range of patterns in ecological communities, such as body size distributions, species abundance distributions, and species-area relations. Ritchie illustrates how the predictions closely match data from many real communities, including those of mammalian herbivores, grasshoppers, dung beetles, and birds. This book offers a compelling alternative to neutral theory in community ecology, one that helps us better understand patterns of biodiversity across the Earth.

Plant Invasions

Anna Traveset, David M. Richardson, 2020-11-20 There are many books on aspects of plant invasions, but none that focus on the key role of species interactions in mediating invasions. This book reviews exciting new findings and explores how new methods and tools are shedding new light on crucial processes in plant invasions. This book will be of interest to academics and students of ecology, researchers engaged in developing management solutions, scientific managers of natural ecosystems, and policy makers.

Patterns in the Structure of Mammalian Communities

Douglas W. Morris, Zvika Abramsky, 1989 Addresses the evolutionary ecology of various closely related well-known mammals. Contributions address issues of habitat selection, species interaction, distribution, abundance, and diversity. Habitats under study include deserts, tropical and boreal forests, heaths, swamps, and savannas. No index. Annotation copyrighted by Book News, Inc., Portland, OR.

Community Ecology

Gary G. Mittelbach, Brian J. McGill, 2019-05-24 Community ecology has undergone a transformation in recent years, from a discipline largely focused on processes occurring within a local area to a discipline encompassing a much richer domain of study, including the linkages between communities separated in space, metacommunity dynamics, niche and neutral theory, the interplay between ecology and evolution, eco-evolutionary dynamics, and the influence of historical and regional processes in shaping patterns of biodiversity. To fully understand these new developments, however, students continue to need a strong foundation in the study of species interactions and how these interactions are assembled into food webs and other ecological networks. This new edition fulfills the book's original aims, both as a much-needed up-to-date and accessible introduction to modern community ecology and in identifying the important

questions that are yet to be answered This research driven textbook introduces state of the art community ecology to a new generation of students adopting reasoned and balanced perspectives on as yet unresolved issues Community Ecology is suitable for advanced undergraduates graduate students and researchers seeking a broad up to date coverage of ecological concepts at the community level
