Ecosystem Planning in Florida Samuel David Brody,2016-04-29 While ecosystem management requires looking beyond specific jurisdiction and focusing on broad spatial scales most planning decisions particularly in the USA are made at local level By looking at land use planning in Florida this volume recognizes the need for planners and resource managers to address ecosystem problems at local and community levels The factors causing ecosystem decline such as rapid urban development and habitat fragmentation occur at the local level and are generated by local land use policies This book argues that understanding how local jurisdictions can capture and implement the principles of managing natural systems will lead to more sustainable levels of environmental planning in the future

Institutions and Sustainability Volker Beckmann,Martina

Padmanabhan,2009-02-07 From the first vague idea to use Konrad Hagedorn s 60th birthday as an inspi tion for taking stock of his vibrant academic contributions this joint book project has been a great pleasure for us in many ways Pursuing Hagedorn s intellectual development we have tried to reflect on the core questions of humanity according to Ernst Bloch Who are we Where do we come from and Where are we heading In this way and without knowing it Konrad Hagedorn initiated a c lective action process he would have very much enjoyed if he had been allowed to take part in it But it was our aim and constant motivation to surprise him with this collection of essays in his honour Konrad Hagedorn was reared as the youngest child of a peasant family on a small farm in the remote moorland of East Frisia Germany During his childhood in the poverty ridden years after the Second World War he faced a life where humans were heavily dependent on using nature around them for their livelihoods meanwhile he learned about the fragility of the environment As a boy he tended a one room schoolhouse where his great intellectual talents were first r ognised and used for co teaching his schoolmates These early teaching expe ences might have laid the foundations for his later becoming a dedicated lecturer and mentor

Oceans Governance Donald R. Rothwell,David L. VanderZwaag,2006-09-27 Australia and Canada have been at the forefront of efforts to operationalize integrated oceans and coastal management Throughout the 1990s both countries devoted considerable effort to developing strategies to give effect to international ocean management obligations This key book focuses on principles of marine environmental conservation and management maritime regulation and enforcement and

regional maritime planning and implementation With contributions from respected scholars this informative book collectively assesses the obligations compliance implementation and trends in international ocean law particularly in giving effect to an Oceans Policy regional maritime planning international oceans governance and maritime security This book will be of interest to all academics involved with maritime studies and international law Natural Resource Management Issues in Human-Influenced Landscapes Hemachandra, Dilini, Dissanayaka, Samantha, 2024-08-22 Researchers working on natural resource management issues in human influenced landscapes need to be able to elicit both biophysical and socio economic information and explore the interactions between these realms to identify appropriate management options Biophysical scientists are increasingly interested in researching natural resource management This however requires a sensitivity to the socio ecological dimensions in a landscape and at least a basic understanding of how to incorporate such in the research designing phase Natural Resource Management Issues in Human Influenced Landscapes documents the firsthand research designing experience of prolific researchers for the knowledge of budding researchers which is not usually shared in journal publications The chapters showcase cases narrated by the authors about their field experiences and cross country comparisons Covering topics such as biodiversity plant genetic resources and sustainable production this premier reference source is an essential resource for ecologists government officials students and educators of higher education librarians researchers and academicians Systemic Management Charles W. Fowler, 2009-03-26 Systemic management describes a holistic objective and universally applicable form of management providing a framework for addressing environmental challenges such as global warming emergent diseases deforestation overpopulation the extinction crisis pollution over fishing and habitat destruction Its goals are the consistently sustainable relationships between humans and ecosystems between humans and other species and between humans and the biosphere This book presents a convincing argument that these goals and the means to achieve them can be inferred from empirical information It describes how comparisons between humans and other species reveal patterns that can serve to guide management toward true sustainability i e ways that are empirically observed to work in natural systems This objective approach has rarely been possible in conventional management because sustainability is invariably undermined by conflicting human values Systemic management is presented as a specialized process of pattern based decision making that avoids the inconsistency subjectivity and error in current management practice It clearly demonstrates how mimicking nature s empirical examples of sustainability can circumvent anthropocentric tendencies to overuse misuse human values in management and illustrates the science best suited for achieving sustainability through examples of research that address specific management questions
