Ecosystems Of Disturbed Ground:

Ecosystems of Disturbed Ground L.R. Walker, 1999-12-17 As the human population inexorably grows its cumulative impact on the Earth's resources is hard to ignore. The ability of the Earth to support more humans is dependent on the ability of humans to manage natural resources wisely. Because disturbance alters resource levels, effective management requires understanding of the ecology of disturbance. This book is the first to take a global approach to the description of both natural and anthropogenic disturbance regimes that physically impact the ground. Natural disturbances such as erosion, volcanoes, wind, herbivory, flooding, and drought, plus anthropogenic disturbances such as forestry, grazing, mining, urbanization, and military actions are considered. Both disturbance impacts and the biotic recovery are addressed, as well as the interactions of different types of disturbance. Other chapters cover processes that are important to the understanding of disturbance of all types, including soil processes, nutrient cycles, primary productivity, succession, animal behaviour, and competition. Humans react to disturbances by avoiding, exacerbating, or restoring them, or by passing environmental legislation. All of these issues are covered in this book. Managers need better predictive models and robust data collections that help determine both site-specific and generalized responses to disturbance. Multiple disturbances have a complex effect on both physical and biotic processes as they interact. This book provides a wealth of detail about the process of disturbance and recovery, as well as a synthesis of the current state of knowledge about disturbance theory with extensive documentation.

Ecosystems of Disturbed Ground L. R. Walker, 1999 *Ecosystems of the World* Lawrence R. Walker, 1999 **Reclamation of**

Mine-impacted Land for Ecosystem Recovery Nimisha Tripathi, Raj S. Singh, Colin D. Hills, 2016-04-18 Mining activities significantly impact the environment; they generate huge quantities of spoil, promote deforestation, and the loss of agricultural production, as well as releasing contaminants that result in the loss of valuable soil resources. These negative impacts are now being recognized, and this book shows how corrective action can be taken. The introduction of sustainable mining requires mitigation strategies that start during the mine planning stage and extend to after mineral extraction has ceased, and post-closure activities are being executed. *Reclamation of Mine-impacted Land for Ecosystem Recovery* covers methods of rejuvenation of mine wasteland, including different practices of physical, chemical, and ecological engineering, methods, benefits of rejuvenation, stabilization of land surfaces, pollution control, aesthetic improvement, general amenity, plant productivity, and carbon sequestration, as well as restoring biodiversity and ecosystem function, best management practices, and feasible solutions to the impacts of mining, which will reduce the pollution load by reducing the discharge rate and the pollutant concentration, reduce erosion and sedimentation problems, and result in improved abandoned mine lands and ecosystem development. The authors explain how mining impacts on soil properties and how soil carbon reserves, soil fertility, can be restored when mining has ceased. Restoration involves a coordinated approach that recognizes the importance of key soil properties to enable re-vegetation to take place rapidly and ecosystems to be established in a low cost and sustainable

way This book's unique combination of the methods for reclamation technologies with policies and best practice worldwide will provide the background and the guidance needed by scientists researchers and engineers engaged in land reclamation as well as by industry managers

Plant Disturbance Ecology Edward A. Johnson, Kiyoko Miyanishi, 2010-07-20 The media coverage of natural disasters hurricanes fires floods ice storms etc indicates the prevalence of natural disasters in most if not all ecosystems In order for scientists to study understand and ultimately predict how these disturbances affect ecosystems it is necessary for them to know more about the physical processes involved in these disturbances and to learn how to couple these processes to the ecological systems Essential for all ecologists forest researchers and conservation biologists this book includes chapters on the disturbance processes how the disturbance causes necrosis or death to individuals and their effects on population or community processes In Plant Disturbance Ecology physical scientists who study disturbances provide an introduction to the physical disturbance processes while ecologists relate this information to the way the vegetation responds to the disturbances This reference is also key for all researchers hydrology geomorphology and environmental management Includes coverage on six different disturbance processes Wind Gravity Geomorphic Hydrologic Combustion and Biotic Provides a clear explanation of how some of the physical processes of disturbance affect plant ecological processes Offers ecologists an up to date understanding of the physical processes and allows them to predict future affects of disturbances Unites two related fields by linking the disturbance processes and ecological responses Presents physical scientists with ideas of how they might usefully apply their knowledge to advance understanding of ecological systems

A Caribbean Forest Tapestry Nicholas V. L. Brokaw, 2012-06-28 This book explains how to foresee and manage ecosystem changes in the Luquillo Mountains in Puerto Rico by looking at underlying causes and effects The lessons from the abiotic and biotic environments populations and ecosystems in this region apply to analogous forest biomes in Central and South America as well as around the world

Long-term Ecological Research Michael R. Willig, Lawrence R. Walker, 2016 This book explores the broader impacts arising from collaborative and multidisciplinary participation in the Long Term Ecological LTER Program with regard to personal perspectives attitudes and practices A series of retrospective essays addresses probing questions to uncover the extent to which participation has affected the ways that scientists conduct research educate students or provide outreach Concluding chapters integrate and synthesize the findings from the essays from historical behavioral sociological perspectives

Linking Restoration and Ecological Succession Lawrence R. Walker, Joe Walker, Richard J. Hobbs, 2007-10-16 While studies of restoration and ecological succession have been published independently there is much overlap between these approaches that has not been adequately explored Linking Restoration and Ecological Succession integrates practical information from restoration projects around the world with the latest developments in successional theory This innovative book recognizes the critical roles of disturbance ecology landscape ecology ecological assembly invasion biology ecosystem health and historical ecology in habitat restoration and argues that

restoration within a successional context will best utilize the lessons from each of these disciplines To successfully restore an ecosystem that needs minimal care the temporal dynamics of successional processes must be considered By re examining restoration in the light of succession the authors hope to encourage the development of new approaches to the practice of restoration supported by solid ecological principles *The Biology of Disturbed Habitats* Lawrence R. Walker,2012

Providing a global summary of the biology of disturbance ecology this text offers both the conceptual underpinnings and practical advice required to comprehend and address the unprecedented environmental challenges facing humans It examines both natural and anthropogenic disturbances in aquatic and terrestrial habitats **Environmental Disasters, Natural Recovery and Human Responses** Roger del Moral, Lawrence R. Walker,2007-03-29 Natural disasters destroy more property and kill more people with each passing year Volcanic eruptions earthquakes hurricanes tsunamis floods landslides fires and other natural events are becoming more frequent and their consequences more devastating Del Moral and Walker provide a comprehensive summary of the diverse ways in which natural disasters disrupt humanity and how humans cope Burgeoning human numbers shrinking resources and intensification of the consequences of natural disasters have produced a crisis of unparalleled proportions Through this detailed study the authors provide a template for improving restoration to show how relatively simple approaches can enhance both human well being and that of the other species on the planet This book will appeal to ecologists land managers as well as anyone curious about the natural world and natural disasters *Cities That Think like Planets* Marina Alberti,2016-07-01 As human activity and environmental change come to be increasingly recognized as intertwined phenomena on a rapidly urbanizing planet the field of urban ecology has risen to offer useful ways of thinking about coupled human and natural systems On the forefront of this discipline is Marina Alberti whose innovative work offers a conceptual framework for uncovering fundamental laws that govern the complexity and resilience of cities which she sees as key to understanding and responding to planetary change and the evolution of Earth Bridging the fields of urban planning and ecology Alberti describes a science of cities that work on a planetary scale and that links unpredictable dynamics to the potential for innovation It is a science that considers interactions at all scales between people and built environments and between cities and their larger environments *Cities That Think like Planets* advances strategies for planning a future that may look very different from the present as rapid urbanization could tip the Earth toward abrupt and nonlinear change Alberti s analyses of the various hybrid ecosystems such as self organization heterogeneity modularity multiple equilibria feedback and transformation may help humans participate in guiding the Earth away from inadvertent collapse and toward a new era of planetary co evolution and resilience *Urban Ecosystem Ecology* J. Aitkenhead-Peterson,2020-01-22 If more than half of the Earth s people live in cities and the amount of paved surfaces in the United States is equivalent to the area of Ohio shouldn t our sciences thrive in the city *Urban Ecosystem Ecology* takes on the important task of reconciling environmental sciences with the world s growing urbanization From wildlife to water from

urban agriculture to low impact development we need a better understanding of the urban ecosystem

Recent Hurricane Research Anthony Lupo, 2011-04-19 This book represents recent research on tropical cyclones and their impact and a wide range of topics are covered An updated global climatology is presented including the global occurrence of tropical cyclones and the terrestrial factors that may contribute to the variability and long term trends in their occurrence Research also examines long term trends in tropical cyclone occurrences and intensity as related to solar activity while other research discusses the impact climate change may have on these storms The dynamics and structure of tropical cyclones are studied with traditional diagnostics employed to examine these as well as more modern approaches in examining their thermodynamics The book aptly demonstrates how new research into short range forecasting of tropical cyclone tracks and intensities using satellite information has led to significant improvements In looking at societal and ecological risks and damage assessment authors investigate the use of technology for anticipating and later evaluating the amount of damage that is done to human society watersheds and forests by land falling storms The economic and ecological vulnerability of coastal regions are also studied and are supported by case studies which examine the potential hazards related to the evacuation of populated areas including medical facilities These studies provide decision makers with a potential basis for developing improved evacuation techniques

Disturbance Ecology Thomas Wohlgemuth, Anke Jentsch, Rupert Seidl, 2022-11-19 This edited work presents a multi faceted view on the causes and consequences of disturbance in ecosystems Vegetation can be affected by a variety of different disturbances such as wind floods fire and insect attack leading to an abrupt change in live biomass Disturbance is a motor of vegetation dynamics but also sensitive to climate change and poses a challenge for ecosystem management Readers will discover the global distribution of disturbance regimes and learn about the importance of disturbances for biodiversity and the evolution of plant and animal life The book provides a Central European perspective on disturbance ecology and addresses important disturbance agents such as fire wind avalanches tree diseases insect defoliators bark beetles and large herbivores in dedicated chapters It furthermore includes chapters on anthropogenic disturbances in forests and grasslands The impact of climate change on disturbance regimes and approaches to address disturbance risks in ecosystem management are discussed in concluding chapters Within the 18 chapters 14 textboxes highlight current topics of disturbance ecology and provide deeper methodological insights into

the field Disturbances strongly shape our landscapes and maintain our biodiversity A better understanding of their ecology is thus fundamental for contextualizing the dynamic changes in our environment This book is a valuable resource for students and practitioners interested in disturbances and their management *Principles of Terrestrial Ecosystem Ecology* F Stuart Chapin III, Pamela A. Matson, Harold A. Mooney, 2006-04-10 Human activities are affecting the global environment in myriad ways with numerous direct and indirect effects on ecosystems The climate and atmospheric composition of Earth are changing rapidly Humans have directly modified half of the ice free terrestrial surface and use 40% of terrestrial production Our actions are causing the sixth major extinction event in the history of life on Earth and are radically modifying the interactions among forests, fields, streams and oceans This book was written to provide a conceptual basis for understanding terrestrial ecosystem processes and their sensitivity to environmental and biotic changes We believe that an understanding of how ecosystems operate and change must underlie our analysis of both the consequences and the mitigation of human caused changes This book is intended to introduce the science of ecosystem ecology to advanced undergraduate students, beginning graduate students and practicing scientists from a wide array of disciplines We also provide access to some of the rapidly expanding literature in the many disciplines that contribute to ecosystem understanding **Science for the**
