Circumventricular Organs and Brain Fluid Environment Armin Ermisch,Rainer Landgraf,Hans-Joachim Rühle,1992 This volume provides a picture of the state of the art and of the perspectives opened by new powerful approaches to the study of the structure and function of Circumventricular Organs CVOs Studies on the CVOs reflected in this book comprise many aspects from cellular elements to the whole organism the accessibility of these organs for chemical signals signal ligand receptor interactions the transfer of information to distinct brain regions the effects induced in these brain regions and the influence on the regulation of body functions including autonomic and behavioral alterations Some of these aspects strongly depend upon the microenvironment of the cells involved in this cascade of events Therefore the brain fluid environment in its broadest sense is a central focus This excellent work is therefore an up to date report on interdisciplinary approaches and concepts offering new insights into the complex phenomena of brain function and shows directions in which to proceed

**Fertilization Mechanisms in Man and Mammals** Ralph Gwatkin,2012-12-06 Fertilization in mammals normally occurs within the oviduct where it is relatively inaccessible to study However as a result of painstaking research most of it carried out over the last five years this barrier to experimentation has been largely overcome by the development of in vitro fertilization techniques for at least 11 different species including man The result has been a rapid increase in our knowledge of the physiological and biochemical mechanisms involved in the fertilization process The aim of this book which is an extension of my recent review of cell surface interactions in fertilization Gwatkin 1976 is to present a brief but well documented account of the new knowledge

that has been attained Although this book deals with mammalian fertilization mechanisms I have included some recent experiments on amphibian and invertebrate gametes to supplement the mammalian picture This information is particularly valuable as the relatively large number of eggs available from these lower forms has advanced our knowledge of certain fertilization mechanisms beyond what is known in mammals However in the interest of brevity I have omitted details of morphology and minor variations between species For these and other aspects not covered here the reader is referred to the books of Austin 1965 1968 vii viii PREFACE Austin and Short 1972 Metz and Monroy 1969 Monroy 1965 Lord Rothschild 1956a and Zamboni 1971a

**Extracellular Matrix** Susan Hawkes, 2012-12-02 Extracellular Matrix contains the proceedings of the symposium The Extracellular Matrix sponsored by the Michigan Molecular Institute and held in Midland Michigan on June 28 July 2 1982 The papers explore the role played by the extracellular matrix ECM in the physiology of a cell particularly in the regulation of cellular phenotypes differentiation and proliferation The progress made in isolating and defining the chemistry and functional interactions of the ECM components is discussed along with the biology of the ECM This book is comprised of 52 chapters and begins with an introduction to the ECM with emphasis on the question of whether the malignant process can be defined in a cell culture model and in particular whether the pericellular matrix is characteristically altered in cancer The discussion then turns to the structure of the heparan sulfate proteoglycans and the molecular mechanisms responsible for the association of these molecules with the surfaces of cultured cells Subsequent chapters focus on the chemistry of ECM components such as collagen glycosaminoglycans and adhesive glycoproteins along with their functional interactions biosynthesis turnover and degradation The final section is devoted to the diseased states of ECM This monograph should serve as a valuable reference for biochemists as well as undergraduate and graduate students of biochemistry
