The State of Conservation Joshua Nygren, 2025-01-06 In the twentieth century natural resource conservation emerged as a vital force in US politics laying the groundwork for present day sustainability Merging environmental agricultural and political history Joshua Nygren examines the political economy and ecology of agricultural conservation through the lens of the conservation industrial complex This evolving public private network which united the US Department of Agriculture Congress local and

national organizations and the agricultural industry guided soil and water conservation in rural America for much of the century. Contrary to the classic tales of US environmental politics and the rise and fall of the New Deal Order, this book emphasizes continuity. Nygren demonstrates how the conservation policies, programs, and partnerships of the 1930s and 1940s persisted through the age of environmentalism and how their defining traits anticipated those typically associated with late twentieth-century political culture. The conservation industrial complex promoted a development-oriented brand of conservation that aided the rise of large-scale capital-intensive agriculture, which continues today. It also reshaped the physical and political landscapes of the country, leading to impressive conservation victories and spectacular failures by privileging some environments, degrading others, and intensifying farm depopulation. In the name of environmental protection, agricultural conservation made rural America less equal.

No-till Farming Systems for Sustainable Agriculture Yash P. Dang, Ram C. Dalal, Neal W. Menzies, 2020-09-03. This book is a comprehensive summary of current global research on no-till farming and its benefits and challenges from various agronomic, environmental, social, and economic perspectives. It details the characteristics and future requirements of no-till farming systems across different geographic and climatic regions and outlines what is needed to increase the uptake of no-till farming globally. Over 35 chapters, this book covers in detail the agronomic and soil management issues that must be resolved to ensure the successful implementation of these systems. Important economic, environmental, social, and policy considerations are discussed. It also features a series of case studies across a number of regions globally, highlighting the challenges and opportunities for no-till and how these may vary depending on climate and geopolitical location. This book is a remarkable

compilation by experts in no till farming systems The promotion and expansion of no till farming systems worldwide will be critical for food security and resource and environmental sustainability This is an invaluable reference for both researchers and practitioners grappling with the challenges of feeding the world s rising population in an environment increasingly impacted by climate change It is an essential reading for those seeking to understand the complexity of no till farming systems and how best to optimise these systems in their region *The Greater Plains* Brian Frehner, Kathleen A.

Brosnan, 2021-07 *The Greater Plains* tells a new story of a region stretching from the state of Texas to the province of Alberta where the environments are as varied as the myriad ways people have inhabited them These innovative essays document a complicated history of human interactions with a sometimes plentiful and sometimes foreboding landscape from the Native Americans who first shaped the prairies with fire to twentieth century oil regimes whose pipelines linked the region to the world *The Greater Plains* moves beyond the narrative of ecological desperation that too often defines the region in scholarly works and in popular imagination Using the lenses of grasses animals water and energy the contributors reveal tales of human adaptation through technologies ranging from the travois to bookkeeping systems and hybrid wheat Transnational in its focus and interdisciplinary in its scholarship *The Greater Plains* brings together leading historians geographers anthropologists and archaeologists to chronicle a past rich with paradoxical successes and failures conflicts and cooperation but also continual adaptation to the challenging and ever shifting environmental conditions of the North American heartland
