 Time Scales* Klaus Morawetz,2013-03-09 This book is the result of the many discussions and collaborations that de veloped  
 from the seven previous workshops held on this topic This ongoing series of interdisciplinary workshops provided an  
 opportunity for the presen tation and exchange of results describing nonequilibrium phenomena at short time scales The  
 important questions concern the correlation and memory ef fects in dense interacting systems currently under study in  
 various areas of physics Experiments on very short time scales are especially characterized by the strong correlations in  
 systems far from equilibrium and by their non linear dynamics In this regard conventionally applied theoretical techniques  
 are critically reviewed and new theoretical concepts are discussed Possible signals of nonequilibrium effects are extracted  
 from experiments using power ful techniques and skills The exchange of views and techniques from different areas of physics  
 helped to stimulate such developments The impressive success of experiments using short laser pulses to probe the  
 properties of matter as well as of the new methods of analysis of the early phases of heavy ion reactions initiated a review of  
 the available many body theoretical methods These statistical methods describing strong nonequilib rium situations were  
 known at least partially for a long time However recent developments in computing power have provided the possibility of  
 accurately comparing ab initio and approximate methods      Catalog of Copyright Entries. Part 1. [B] Group 2. Pamphlets,
