Fundamentals Of Semiconductor Processing Technologies:

Fundamentals of Semiconductor Processing Technology Badih El-Kareh, Lou N. Hutter, 2012-12-06 The drive toward new semiconductor technologies is intricately related to market demands for cheaper smaller faster and more reliable circuits with lower power consumption The development of new processing tools and technologies is aimed at optimizing one or more of these requirements This goal can however only be achieved by a concerted effort between scientists engineers technicians and operators in research development and manufacturing It is therefore important that experts in specific disciplines such as device and circuit design understand the principle capabilities and limitations of tools and processing technologies It is also important that those working on specific unit processes such as lithography or other processes be familiar with other unit processes used to manufacture the product Several excellent books have been published on the subject of process technologies These texts however cover subjects in too much detail or do not cover topics important to modern technologies This book is written with the need for a bridge between different disciplines in mind It is intended to present to engineers and scientists those parts of modern processing technologies that are of greatest importance to the design and manufacture of semiconductor circuits The material is presented with sufficient detail to understand and analyze interactions between processing and other semiconductor disciplines such as design of devices and circuits their electrical parameters reliability and yield
