Sharer, Wendy Ashmore, 1979 This textbook surveys the techniques methods and theoretical frameworks of contemporary prehistoric archaeology In our presentation we view prehistoric archaeology as an integral part of the larger field of anthropology conditioned by the historical development concepts and goals of its parent discipline While we treat the evolving perspectives of archaeological method and theory together with their implications for understanding the prehistoric past the text is not a manifesto for any single doctrine or school within the field Rather it seeks to synthesize those aspects of both the traditional and the new archaeology that have contributed significantly to the current status of prehistoric archaeology p ix

Archaeological Stratigraphy Edward C. Harris,2014-06-28 Practices of Archaeological Stratigraphy brings together a number of examples which illustrate the development and use of the Harris Matrix in describing and interpreting archaeological sites This matrix the theory of which is described in two editions of the previous book by Harris Principles of Archaeological Stratigraphy made possible for the first time a simple diagrammatic representation of the stratigraphic sequence of a site no matter how complex The Harris Matrix by showing in one diagram all three linear dimensions plus time represents a quantum leap over the older methods which relied on sample sections only In this book 17 essays present a sample of new work demonstrating the strengths and uses of the Harris Matrix the first ever published collection of papers devoted solely to stratigraphy in archaeology The crucial relationships between the Harris methods open area excavation techniques the interpretation of interfaces and the use of single context plans and recording sheets is clarified by reference to specific sites These sites range from medieval Europe through Mayan civilizations to Colonial Williamsburg Virginia This book will be of great value to all those involved in excavating and recording archaeological sites and should help to ensure that the maximum amount of stratigraphic information can be gathered from future investigations Presents case studies which illuminate the Harris matrix method invented by Edward C Harris Senior editor is the inventor of this method and principle in the field Serves as a companion volume to Harris s Principles of Archaeological Stratigraphy A Universal Theory of Pottery Production Richard A. Advances in Archaeological Method and Theory Michael B. Schiffer, 2014-06-30 *Advances in Archaeological Method and Theory* Volume 9 is a collection of papers that describes protohuman culture, pastoralism, artifact classification, and the use of materials science techniques to study the construction of pottery. Some papers discuss contingency tables, geophysical methods of archaeological site surveying, and predictive models for archaeological resource location. One paper reviews the methodological and theoretical advances in the archaeological studies of human origins, particularly covering the Plio-Pleistocene period. Another paper explains the historic and prehistoric development of pastoralism through archaeological investigation. One paper traces the three phases of artifact classification, each being a representation of a different attitude and approach. Another paper evaluates pottery artifacts using a number of basic materials science concepts and analytic approaches toward the study of their mechanical strength, and also reviews their use in archaeological studies of pottery production and organization. To investigate archaeological intrasites, the archaeologist can use different specialized methods such as seismic, electromagnetic resistivity, magnetometry, and radar. Another paper describes various empiric-correlative models for locational prediction developed in both contexts of cultural resource management and academic research. Sociologists, anthropologists, ethnographers, museum curators, professional or amateur archaeologists will find the collection immensely valuable.
