material required by an introductory course in a clear and refreshing way A second colour is used throughout to enhance learning and understanding Each topic is introduced from first principles so that the text is suitable for students without a prior background in physics At the same time the book is designed to enable students to proceed easily to subsequent courses in physics and may be used to support such courses Mathematical methods in particular calculus and vector analysis are introduced within the text as the need arises and are presented in the context of the physical problems which they are used to analyse Particular aims of the book are to demonstrate to students that the easiest most concise and least ambiguous way to express and describe phenomena in physics is by using the language of mathematics and that at this level the total amount of mathematics required is neither large nor particularly demanding Modern physics topics relativity and quantum mechanics are introduced at an earlier stage than is usually found in introductory textbooks and are integrated with the more classical material from which they have evolved This book encourages students to develop an intuition for relativistic and quantum concepts at as early a stage as is practicable The text takes a reflective approach towards the scientific method at all stages and in keeping with the title of the text emphasis is placed on understanding of and insight into the material presented

Gedde,2013-12-11 This book is the result of my teaching efforts during the last ten years at the Royal Institute of Technology

The purpose is to present the subject of polymer physics for undergraduate and graduate students to focus the fundamental aspects of the subject and to show the link between experiments and theory The intention is not to present a compilation of the currently available literature on the subject Very few reference citations have thus been made Each chapter has essentially the same structure starting with an introduction continuing with the actual subject summarizing the chapter in 300-500 words and finally presenting problems and a list of relevant references for the reader The solutions to the problems presented in Chapters 1-12 are given in Chapter 13 The theme of the book is essentially polymer science with the exclusion of that part dealing directly with chemical reactions The fundamentals in polymer science including some basic polymer chemistry are presented as an introduction in the first chapter The next eight chapters deal with different phenomena processes and states of polymers The last three chapters were written with the intention of making the reader think practically about polymer physics How can a certain type of problem be solved What kinds of experiment should be conducted This book would never have been written without the help of my friend and adviser Dr Anthony Bristow who has spent many hours reading through the manuscript criticizing the content
