Instrumental Variables Roger John Bowden, Roger J. Bowden, Darrell A. Turkington, 1990-01-26 This book will be useful for advanced undergraduates and graduates and be a source of reference for researchers in econometrics and statistics

A Guide to Modern Econometrics Marno Verbeek, 2008-05-27 This revised and updated edition of *A Guide to Modern Econometrics* continues to explore a wide range of topics in modern econometrics by focusing on what is important for doing and understanding empirical work It serves as a guide to alternative techniques with the emphasis on the intuition behind the approaches and their practical relevance New material includes Monte Carlo studies weak instruments nonstationary panels count data duration models and the estimation of treatment effects Features of this book include Coverage of a wide range of topics including time series analysis cointegration limited dependent variables panel data analysis and the generalized method of moments Empirical examples drawn from a wide variety of fields including labour economics finance international economics environmental economics and macroeconomics End of chapter exercises review key concepts in light of empirical examples *A Guide to Econometrics* Peter Kennedy, 2003 A popular intuitively based overview of econometrics

Econometric Analysis of Cross Section and Panel Data, second edition Jeffrey M. Wooldridge, 2010-10-01 The second edition of a comprehensive state of the art graduate level text on microeconomic methods substantially revised and updated The second edition of this acclaimed graduate text provides a unified treatment of two methods used in contemporary econometric research cross section and data panel methods By focusing on assumptions that can be given behavioral content the book maintains an appropriate level of rigor while emphasizing intuitive thinking The analysis covers both linear and nonlinear models including models with dynamics and or individual heterogeneity In addition to general estimation frameworks particular methods of moments and maximum likelihood specific linear and nonlinear methods are covered in detail including probit and logit models and their multivariate Tobit models models for count data censored and missing data schemes causal or treatment effects and duration analysis *Econometric Analysis of Cross Section and Panel Data* was the first graduate econometrics text to focus on microeconomic data structures allowing assumptions to be separated into population and sampling assumptions This second edition has been substantially updated and revised Improvements include a broader class of models for missing data problems more detailed treatment of cluster problems an important topic for empirical researchers expanded discussion of generalized instrumental variables GIV estimation new coverage based on the author's own recent research of inverse probability weighting a more complete framework for estimating treatment effects with panel data and a firmly established link between econometric approaches to nonlinear panel data and the generalized estimating equation literature popular in statistics and other fields New attention is given to explaining when particular econometric methods can be applied the goal is not only to tell readers what does work but why certain obvious procedures do not The numerous included exercises both theoretical and computer based allow the reader to

extend methods covered in the text and discover new insights

Trivedi, 2005-05-09 The book is oriented to the practitioner

Feldman, 1985-05 The authors provide a systematic treatment of the major problems involved in using regression analysis They clearly and concisely discuss the consequences of violating the assumptions of the regression model procedures for detecting violations and strategies for dealing with these problems

Spatial Econometrics: Methods and Models L. Anselin, 1988-08-31 Spatial econometrics deals with spatial dependence and spatial heterogeneity critical aspects of the data used by regional scientists These characteristics may cause standard econometric techniques to become inappropriate In this book I combine several recent research results to construct a comprehensive approach to the incorporation of spatial effects in econometrics My primary focus is to demonstrate how these spatial effects can be considered as special cases of general frameworks in standard econometrics and to outline how they necessitate a separate set of methods and techniques encompassed within the field of spatial econometrics My viewpoint differs from that taken in the discussion of spatial autocorrelation in spatial statistics e g most recently by Cliff and Ord 1981 and Upton and Fingleton 1985 in that I am mostly concerned with the relevance of spatial effects on model specification estimation and other inference in what I call a model driven approach as opposed to a data driven approach in spatial statistics I attempt to combine a rigorous econometric perspective with a comprehensive treatment of methodological issues in spatial analysis

Local Instrumental Variables James Joseph Heckman, Edward Vytlacil, 2000 This paper unites the treatment effect literature and the latent variable literature The economic questions answered by the commonly used treatment effect parameters are considered We demonstrate how the marginal treatment effect parameter can be used in a latent variable framework to generate the average treatment effect the effect of treatment on the treated and the local average treatment effect thereby establishing a new relationship among these parameters The method of local instrumental variables directly estimates the marginal treatment effect parameters and thus can be used to estimate all of the conventional treatment effect parameters when the index condition holds and the parameters are identified When they are not the method of local instrumental variables can be used to produce bounds on the parameters with the width of the bounds depending on the width of the support for the index generating the choice of the observed potential outcome

International Trade and Economic Growth Hendrik Van den Berg, Joshua J. Lewer, 2007 Unlike any other text on international trade this groundbreaking book focuses on the dynamic long run relationship between trade and economic growth rather than the static short run relationship between trade and economic efficiency The authors begin with well known theory on international trade and then take the student into more recent and less well known work all with a careful balance between empirical and theoretical perspectives A valuable teaching tool for courses in international economics economic growth and economic development at both the undergraduate and graduate levels the book uses some very modest algebra calculus and statistics However most analytical discussions are

Average Treatment Effect Bounds with an Instrumental Variable: Theory and Practice Carlos A. Flores,Xuan Chen,2018-09-29 This book reviews recent approaches for partial identification of average treatment effects with instrumental variables in the program evaluation literature including Manski s bounds bounds based on threshold crossing

models and bounds based on the Local Average Treatment Effect LATE framework It compares these bounds across different sets of assumptions surveys relevant methods to assess the validity of these assumptions and discusses estimation and inference methods for the bounds The book also reviews some empirical applications employing bounds in the program evaluation literature It aims to bridge the gap between the econometric theory on which the different bounds are based and their empirical application to program evaluation

Handbook of Matching and Weighting Adjustments for Causal Inference José R. Zubizarreta,Elizabeth A. Stuart,Dylan S. Small,Paul R. Rosenbaum,2023-04-11 An observational study infers the effects caused by a treatment policy program intervention or exposure in a context in which randomized experimentation is unethical or impractical One task in an observational study is to adjust for visible pretreatment differences between the treated and control groups Multivariate matching and weighting are two modern forms of adjustment This handbook provides a comprehensive survey of the most recent methods of adjustment by matching weighting machine learning and their combinations Three additional chapters introduce the steps from association to causation that follow after adjustments are complete When used alone matching and weighting do not use outcome information so they are part of the design of an observational study When used in conjunction with models for the outcome matching and weighting may enhance the robustness of model based adjustments The book is for researchers in medicine economics public health psychology epidemiology public program evaluation and statistics who examine evidence of the effects on human beings of treatments policies or exposures

The Handbook of Social Psychology Gardner Lindzey,1998 This handbook for social psychologists has been updated to reflect changes in the field since its original publication New topics include emotions self and automaticity and it is structured to show the levels of analysis used by psychologists

Handbook of Bayesian Variable Selection Mahlet G. Tadesse,Marina Vannucci,2021-12-24 Bayesian variable selection has experienced substantial developments over the past 30 years with the proliferation of large data sets Identifying relevant variables to include in a model allows simpler interpretation avoids overfitting and multicollinearity and can provide insights into the mechanisms underlying an observed phenomenon Variable selection is especially important when the number of potential predictors is substantially larger than the sample size and sparsity can reasonably be assumed

The Handbook of Bayesian Variable Selection provides a comprehensive review of theoretical methodological and computational aspects of Bayesian methods for variable selection. The topics covered include spike and slab priors, continuous shrinkage priors, Bayes factors, Bayesian model averaging, partitioning methods, as well as variable selection in decision trees and edge selection in graphical models. The handbook targets graduate students and established researchers who seek to understand the latest developments in the field. It also provides a valuable reference for all interested in applying existing methods and/or pursuing methodological extensions.

Features: Provides a comprehensive review of methods and applications of Bayesian variable selection. Divided into four parts: Spike and Slab Priors, Continuous Shrinkage Priors, Extensions to various Modeling Other Approaches to Bayesian Variable Selection. Covers theoretical and methodological aspects as well as worked-out examples with R code provided in the online supplement. Includes contributions by experts in the field. Supported by a website with code, data, and other supplementary material.

Sustainability of Digital Transformation for the Environment Evgeny Kuzmin, Grigoris L. Kyriakopoulos, Victoria Akberdina, Vikas Kumar, 2024-02-27. On 2 June 2022 in Stockholm, a UN-backed coalition of 1,000 stakeholders from over 100 countries launched an Action Plan to steer digitalization towards accelerating environmentally and socially sustainable development. The Coalition for Digital Environmental Sustainability aims to help reorient and prioritize the application of digital technologies to meet the 2030 Agenda for Sustainable Development and address the triple planetary crisis of climate change, biodiversity loss, and pollution and waste. Inspired by this Agenda, we have directed our research interest toward the search for approaches to sustainable digital transformation for the environment. This Research Topic is a part of our initiative at the annual international scientific conference Digital Transformation in Industry DTI held by the Institute of Economics of the Ural Branch.

Impact evaluation study for Egypt's Takaful and Karama cash transfer program: Part 1: Quantitative report Breisinger, Clemens, Gilligan, Daniel, Karachiwalla, Naureen, Kurdi, Sikandra, El-Enbaby, Hoda, Jilani, Amir, Thai, Giang, 2018-10-19. This report of the evaluation study provides a greater focus on measuring the impact of the larger Takaful program and also attempts to measure the impact of the much smaller Karama program. In addition, IFPRI will conduct a qualitative assessment of the Takaful and Karama program focused on learning about the experience with the program among the poorest beneficiary households. This qualitative assessment will also draw lessons from the quantitative survey to provide another report on the experience of very poor households. The remainder of this report is organized as follows: Chapter 2 provides an overview of the Takaful and Karama Program; Chapter 3 summarizes the impact evaluation design; Chapter 4 describes the evaluation survey and sample; Chapter 5 provides context for the program by using the survey data to summarize the characteristics of beneficiary and non-beneficiary households and describe beneficiaries' experience with program implementation; Chapter 6 presents the impact estimates for Takaful; and Chapter 7 the estimates for Karama. Chapter 8 uses data from a separate representative sample of households collected during the survey to assess the targeting performance of the program. Chapter

9 concludes and discusses implications for social policy in Egypt
