Maintenance Theory of Reliability Toshio Nakagawa, 2006-03-30 Many serious accidents have happened in the world where systems have been large scale and complex and have caused heavy damage and a social sense of instability Furthermore advanced nations have almost finished public infrastructure and rushed into a maintenance period Maintenance will be more important than production manufacture and construction that is more maintenance for environmental considerations and for the protection of natural resources From now on the importance of maintenance will increase more and more In the past four decades valuable contributions to maintenance policies in reliability theory have been made This book is intended to summarize the research results studied mainly by the author in the past three decades The book deals primarily with standard to advanced problems of maintenance policies for system reliability models System reliability can be mainly improved by repair and preventive maintenance and replacement and reliability properties can be investigated by using stochastic process techniques The optimum maintenance policies for systems that minimize or maximize appropriate objective functions under suitable conditions are discussed both analytically and practically The book is composed of nine chapters Chapter 1 is devoted to an introduction to reliability theory and briefly reviews stochastic processes needed for reliability and maintenance theory Chapter 2 summarizes the results of repair maintenance which is the most basic maintenance in reliability The repair maintenance of systems such as the one unit system and multiple unit redundant systems is treated Chapters 3 through 5 summarize the results of three typical maintenance policies of age periodic and block replacements International Journal of Production Economics, 2002 Advances in Production Management Systems. Sustainable Production and Service Supply Chains Vittal Prabhu, Marco Taisch, Dimitris Kiritsis, 2013-09-05 The two volumes IFIP AICT 414 and 415 constitute the refereed proceedings of the International IFIP WG 5.7 Conference on Advances in Production Management Systems APMS 2013 held in University Park PA USA in September 2013 The 133 revised full papers were carefully reviewed and selected for inclusion in the two volumes They are organized in 4 parts sustainable production sustainable supply chains sustainable services and ICT and emerging technologies Application of Renewable Energy in Production and Supply Chain Management Biswajit Sarkar, 2020-06-25 The use of the energy and its resources have changed dramatically in last few decades The increasing use of technology and electrification increases the demand for energy with impacts natural energy resources At present industries are trying to reduce the direct use of traditional energy by utilizing renewable energy as an alternative energy resource Recent studies have attempted to optimize consumed energies for entire systems by using alternative energies These alternatives are different kinds of renewable energies which provide numerous new possibilities to survive without using non renewable energies The production industry is moving toward smart production using the technology of the fourth industrial revolution In this book energy consumption for production and supply chain management are explained through presentation of some of the latest major research advances These studies collectively contribute new ideas and strategies in enriching the literature **Computer Integrated**
