**Integrated Regional Models** Peter Groffman, Gene E. Likens, 2012-12-06 Integrated regional models are conceptual and mathematical models that describe the physical environment biological interactions human decision making and human impact on the environment Efforts are now being made to integrate regional models from the physical biological and social sciences in order to respond to diverse environmental problems This volume explores the latest research developments on processes operating at a variety of scales including regions and how scientists can combine their efforts to develop models linking biological physical and human systems Data requirements for successful integrated regional models are identified and discussed Chapters also consider methodological questions such as whether to integrate disciplinary approaches at the beginning or the end of the modelling process and whether integrated regional models should focus on specific regions or specific problems The information in this volume will enable the reader to view problems such as coastal zone management atmospheric pollution non point source pollution commodity production in forested areas and urban expansion in a broad conceptual context Researchers and graduate students in ecology biology geography and geology will benefit from this innovative approach to contemporary environmental problems

**Bioregional Assessments** K. Norman Johnson, Frederick Swanson, Margaret Herring, Sarah Greene, 1999 In diverse regions around the country impending crises over dwindling natural resources and conflicts over land use have given birth to a new approach to environmental management and policymaking Known as bioregional assessment the approach gives science and scientists a crucial role in the policymaking process bringing together experts on a range of issues to assess existing ecological and social conditions and to provide a base of knowledge from which to develop policy options and management decisions A number of high profile assessments have been conducted and while

much has been written on individual projects little has been done to compare assessments or integrate the lessons they provide Bioregional Assessments synthesizes the knowledge from many regions by examining the assessment process and detailing a series of case studies from around the country Each case study written by knowledgeable leaders from the region features a detailed description of the project followed by reviews from the perspectives of science management and policy Case studies examined are the Forest Ecosystem Management Assessment Team FEMAT Assessment the Great Lakes St Lawrence River Basin Assessments the Everglades South Florida Assessments the Northern Forest Lands Assessments Southern California Natural Community Conservation Planning NCCP the Interior Columbia Basin Ecosystem Management Project and the Sierra Nevada Ecosystem Project In addition the book features introductory chapters that examine the challenges inherent in the assessment of complex regional systems and the role of science in the assessment process The concluding chapter provides a synthesis and analysis of the assessment process Bioregional assessments are quickly becoming an essential part of ecosystem management This book provides a unique look at the theory and practice of bioregional assessments and is an essential volume for resource managers scientists policymakers and anyone involved with formulating or implementing strategies for regional planning and ecosystem management

Elinor Ostrom and the Bloomington School of Political Economy Daniel H. Cole, Michael D. McGinnis, 2017-03-21 In addition to winning the 2009 Nobel Prize in Economic Sciences for her path breaking research on economic governance especially the commons Elinor Lin Ostrom also made important contributions to other fields of political economy and public policy This four volume compendium of papers written by Lin often with coauthors most notably her husband Vincent along with papers by others expanding on her work brings together the strands of her entire empirical analytical theoretical and methodological research program Together with Vincent's important theoretical contributions they defined a distinctive Bloomington School of political economic thought Volume 3 explores the historical development of the Institutional Analysis and Development IAD framework illustrates its application to a wide range of specific policy problems and highlights recent extensions that ensure it will remain a vibrant focus of research for years to come The IAD framework emerged from a long series of interdisciplinary collaborative research projects but the guiding figure in its development was Elinor Ostrom Anyone familiar with the full range of her research will recognize common presuppositions and themes for which she used the IAD framework as an organizing device This book collects examples of policy relevant applications of IAD to a wide range of policy sectors In a fundamental sense the IAD framework helps us understand how Ostrom's mind worked when she approached a particular problem of policy and it highlights those factors that she asserted needed to be considered in any complete analysis Unfortunately she did not leave us a complete or definitive guidebook on how to apply this framework This volume collects important components of such a

guidebook from a wide range of sources including previously unpublished papers and as such it should help anyone seeking to use this framework to analyze a variety of policy areas

The Evolution of American Ecology, 1890-2000 Sharon E. Kingsland,2005 In the 1890s several initiatives in American botany converged The creation of new institutions such as the New York Botanical Garden coincided with radical reforms in taxonomic practice and the emergence of an experimental program of research on evolutionary problems Sharon Kingsland explores how these changes gave impetus to the new field of ecology that was defined at exactly this time She argues that the creation of institutions and research laboratories coupled with new intellectual directions in science were crucial to the development of ecology as a discipline in the United States The main concern of ecology the relationship between organisms and environment was central to scientific studies aimed at understanding and controlling the evolutionary process Kingsland considers the evolutionary context in which ecology arose especially neo Lamarckian ideas and the new mutation theory and explores the relationship between scientific research and broader theories about social progress and the evolution of human civilization By midcentury American ecologists were leading the rapid development of ecosystem ecology and society in the postwar context foreshadowing the environmental critiques of the 1960s As the ecosystem concept evolved so too did debates about how human ecology should be incorporated into the biological sciences Kingsland concludes with an examination of ecology in the modern urban environment reflecting on how scientists are now being challenged to produce innovative responses to pressing problems The Evolution of American Ecology 1890 2000 offers an innovative study not only of the scientific landscape in turn of the century America but of current questions in ecological science

**Ecosystem Approaches to Landscape Management in Central Europe** J.D. Tenhunen,R. Lenz,Ralph Hantschel,2001-01-25 The challenges in ecosystem science encompass a broadening and strengthening of interdisciplinary ties the transfer of knowledge of the ecosystem across scales and the inclusion of anthropogenic impacts and human behavior into ecosystem landscape and regional models The volume

addresses these points within the context of studies in major ecosystem types viewed as the building blocks of central European landscapes The research is evaluated to increase the understanding of the processes in order to unite ecosystem science with resource management The comparison embraces coastal lowland forests associated wetlands and lakes agricultural land use and montane and alpine forests Techniques for upscaling focus on process modelling at stand and landscape scales and the use of remote sensing for landscape level model parameterization and testing The case studies demonstrate ways for ecosystem scientists managers and social scientists to cooperate

and categorized Synthesizing a vast and sometimes labyrinthine literature this book is a useful entry into the scientific philosophy of ecology and natural history The need for integration of the contributions to theory made by different disciplines is a central theme of this book The authors demonstrate that only through such integration will advances in ecological theory be possible Ecologists evolutionary biologists and other serious students of natural history will want this book

**Urban Ecology** John Marzluff, Eric Shulenberg, Wilfried Endlicher, Marina Alberti, Gordon Bradley, Clare Ryan, Craig ZumBrunnen, Ute Simon, 2008-01-03 Urban Ecology is a rapidly growing field of academic and practical significance Urban ecologists have published several conference proceedings and regularly contribute to the ecological architectural planning and geography literature However important papers in the field that set the foundation for the discipline and illustrate modern approaches from a variety of perspectives and regions of the world have not been collected in a single accessible book Foundations of Urban Ecology does this by reprinting important European and American publications filling gaps in the published literature with a few targeted original works and translating key works originally published in German This edited volume will provide students and professionals

with a rich background in all facets of urban ecology The editors emphasize the drivers patterns processes and effects of human settlement The papers they synthesize provide readers with a broad understanding of the local and global aspects of settlement through traditional natural and social science lenses This interdisciplinary vision gives the reader a comprehensive view of the urban ecosystem by introducing drivers patterns processes and effects of human settlements and the relationships between humans and other animals plants ecosystem processes and abiotic conditions The reader learns how human institutions health and preferences influence and are influenced by the others members of their shared urban ecosystem
