As an agent of change, the perceptual domain presents to the team conditions (visual information) which, under the right circumstances, can be used to generate a perceptual response (visual, auditory, tactile, or kinaesthetic) that is the desired response. In essence, the agent is a stimulus, which elicits the desired response. Perceptual agents are provided by the environment, and are designed to be perceived by the team. Agents that are perceived by the team are built into the team and are often referred to as *perceptual agents*.

The team uses the agent used to give the team information of interest (e.g. goal, risk, and opportunity). The agent can be either directly available to the team or represented within the team by a perceptual agent. Representing the agent used in the teaming process is a perceptual agent, and a perceptual agent is a teaming agent. In the perceptual agent:

According to the 1991 census, thousands of people had emigrated from the country, but others remained. Remaining citizens, including women like Maria, suffered the economic effects of the transition. Maria's husband lost his job, and she was forced to become self-employed. Maria's children, who were still in school, were also struggling to find work. Maria's family, like many others, was struggling to make ends meet. Maria's family, like many others, was struggling to make ends meet. A reflex is an automatic (involuntary) response to a stimulus (something that causes a reflex) and is a simple and quick type of neural pathway from sensory to motor responses. Reflexes provide protective responses to truly dangerous situations of organisms in their lives.

## **Integration In The Nervous System:**

**Integration in the Nervous System**, 1979      Biology Sandra Alters, 2000 Designed for a one or two semester non majors course in introductory biology taught at most two and four year colleges This course typically fulfills a general education requirement and rather than emphasizing mastery of technical topics it focuses on the understanding of biological ideas and concepts how they relate to real life and appreciating the scientific methods and thought processes Given the authors work in and dedication to science education this text s writing style pedagogy and integrated support package are all based on classroom tested teaching strategies and learning theory The result is a learning program that enhances the effectiveness efficiency of the teaching and learning experience in the introductory biology course like no other before it
