Roitblat, 2020-10-13 Why a new approach is needed in the quest for general artificial intelligence Since the inception of artificial intelligence we have been warned about the imminent arrival of computational systems that can replicate human thought processes Before we know it computers will become so intelligent that humans will be lucky to be kept as pets And yet although artificial intelligence has

become increasingly sophisticated with such achievements as driverless cars and humanless chess playing computer science has not yet created general artificial intelligence In *Algorithms Are Not Enough* Herbert Roitblat explains how artificial general intelligence may be possible and why a robocalypse is neither imminent nor likely Existing artificial intelligence Roitblat shows has been limited to solving path problems in which the entire problem consists of navigating a path of choices finding specific solutions to well structured problems Human problem solving on the other hand includes problems that consist of ill structured situations including the design of problem solving paths themselves These are insight problems and insight is an essential part of intelligence that has not been addressed by computer science Roitblat draws on cognitive science including psychology philosophy and history to identify the essential features of intelligence needed to achieve general artificial intelligence Roitblat describes current computational approaches to intelligence including the Turing Test machine learning and neural networks He identifies building blocks of natural intelligence including perception analogy ambiguity common sense and creativity General intelligence can create new representations to solve new problems but current computational intelligence cannot The human brain like the computer uses algorithms but general intelligence he argues is more than algorithmic processes

Vigilance Is Not Enough Mark M. Lowenthal, 2025-05-06 A broad and deep survey of American intelligence from before the Revolution to the present Every nation has an intelligence apparatus some means by which its top officials acquire needed information on sensitive issues But each nation does it differently influenced by its history its geographical conditions and its political traditions In this book Mark M Lowenthal examines the development of U S intelligence to explain how and why the United States went from having no intelligence service to speak of to being the world's predominant intelligence power almost overnight and he discusses the difficult choices involved in maintaining that dominance in a liberal democracy Lowenthal describes how the lack of a tradition of spycraft both hindered and helped American efforts to develop intelligence services during and after the Second World War He points to the political pragmatism leading to difficult choices with which most intelligence directors operated the constant tension between security and civil liberties in a constitutional democracy the tension between the need for secrecy and the accountability required for democratic governance and the way the growing importance of technology changed both the methods and the objectives of intelligence gathering Far more than simply an episodic history this book offers an analysis of why American intelligence developed as it did and what it has meant for the nation's and the world's politics
