asserts that effective teaching is rooted in understanding context and a relentless commitment to refining one's instructional practices. The book introduces an array of critical parameters that educators must consider including content selection, learner needs, and the ever-evolving realm of information and communication technologies. It navigates the reader through the intricacies of andragogy, the theoretical foundations of didactics, and innovative pedagogical approaches, offering a comprehensive toolkit for educators striving to optimize their craft.

Street-Level Bureaucracy in Instructional Design
Nirupama Akella, 2024-03-13. This book explores the role and function of instructional designers in higher education, highlighting the real-world discrepancy between their actual contributions to organizational growth and the official job descriptions provided by universities. Investigating how higher education professionals navigate the daily conflict arising from this misalignment, it highlights a number of approaches, including improvising to accommodate additional tasks or strictly adhering to job descriptions. The volume is structured around three main themes: the interpretation of instructional design and the role of instructional designers; the concept of street-level bureaucracy and coping strategies; and the contribution of instructional designers to organizational development. The research is grounded in the sociological and management theory of street-level bureaucracy, allowing the author to dissect employee behavior into microelements and connect these to the macro outcomes of organizational development. The study employs a qualitative approach using quantitative content analysis and qualitative interviewing on a sample of 17 instructional designers from three different regions in the US. The findings challenge institutional and practice assumptions, offering a new perspective of understanding which asks whether instructional designers are predominantly acting as street-level bureaucrats or whether behavior and performance is framed by institutional culture and personal characteristics. The author then discusses the implications of these findings for policy, practice, theory, and future research. It will be of interest to academicians, postgraduate students, and higher education leadership professionals from fields across education management, instructional design, sociology, and research methods.
