Xylem Structure and the Ascent of Sap Melvin T. Tyree, Martin H. Zimmermann, 2013-03-09 The first edition of this book was the first to provide an integrated description of sap ascension from an anatomical and functional point of view The second edition opens with the three dimensional aspects of wood anatomy The cohesion tension theory and new evidence are introduced in response to recent controversies over the mechanism of sap ascent in plants The physiology anatomy and biophysics of xylem dysfunction are discussed and new insights into hydraulic architecture are reviewed with special emphasis on physiological limits on maximum transpiration and how hydraulic architecture limits gas exchange carbon gain and growth of plants The text concludes with a description of xylem failure and pathology The book highlights fascinating areas of current research with the aim to stimulate more work in the future

Heterochrony in Evolution Michael L. McKinney, 2013-11-21 an adult poet is simply an individual in a state of arrested development in brief a sort of moron Just as all of us in utero pass through a stage in which we are tadpoles so all of us pass through a state in our nonage when we are poets A youth of seventeen who is not a poet is simply a donkey his development has been arrested even anterior to that of the tadpole But a man of fifty who still writes poetry is either an unfortunate who has never developed intellectually beyond his teens or a conscious buffoon who pretends to be something he isn't something far younger and juicier than he actually is H 1 Mencken High and Ghostly Matters Prejudices Fourth Series 1924 Where would evolution be Without this thing heterochrony M L McKinney 1987 One of the joys of working in a renascent field is that it is actually possible to keep up with the literature So it is with mixed emotions that we heterochronists even larval forms like myself view the recent veritable explosion of interest in heterochrony in Gould's words in this volume On the positive side it is obviously necessary and desirable to extend and expand the inquiry but one regrets that already we are beginning to talk past lose track of and even ignore each other as we carve out individual interests

Plant Strategies Daniel C. Laughlin, 2023 The goal of this accessible book is to articulate a coherent framework that unifies life history theory with comparative functional ecology to advance prediction in plant ecology Predicting how species respond to global change is perhaps the most important challenge of our time

Evolution and Escalation Geerat J. Vermeij, 1993-08-15 Here is one biologist's interpretation of the chronology of life during the last six hundred million years of earth history an extended essay that draws on the author's own data and a wide ranging literature survey to discuss the nature and dynamics of evolutionary change in organisms and their biological surroundings Geerat Vermeij demonstrates that escalation the process by which species adapt to or are limited by their enemies as the latter increase in ability to acquire and retain resources has been a dominant theme

in the history of life despite frequent episodes of extinction Systematics and Evolution of the Ranunculiflorae Uwe Jensen, Joachim W. Kadereit, 2012-12-06 The volume presents current ideas about the systematics and evolution of the Ranunculiflorae and most of its constituent families A strong effort has been made to integrate DNA and morphological anatomical etc evidence and new ideas about the origin and phylogeny of the entire group as well as the Berberidaceae Lardizabalaceae Ranunculaceae and Papaveraceae are arrived at **Dictionary of Theoretical Concepts in Biology** Keith E. Roe, Richard G. Frederick, 1981 1166 concepts primarily from English language articles books reviews and histories published through 1979 Includes plant and animal biology excludes for the most part human and behavioral biology Each entry gives concept and relevant authoritative citations Many cross references **Progress in Botany / Fortschritte der Botanik** Heinz Ellenberg, Karl Esser, Hermann Merxmüller, Eberhard Schnepf, Hubert Ziegler, 2012-12-06 Vascular Transport in Plants N. Michelle Holbrook, Maciej A. Zwieniecki, 2011-09-06 Vascular Transport in Plants provides an up to date synthesis of new research on the biology of long distance transport processes in plants It is a valuable resource and reference for researchers and graduate level students in physiology molecular biology physiology ecology ecological physiology development and all applied disciplines related to agriculture horticulture forestry and biotechnology The book considers long distance transport from the perspective of molecular level processes to whole plant function allowing readers to integrate information relating to vascular transport across multiple scales The book is unique in presenting xylem and phloem transport processes in plants together in a comparative style that emphasizes the important interactions between these two parallel transport systems Includes 105 exceptional figures Discusses xylem and phloem transport in a single volume highlighting their interactions Syntheses of structure function and biology of vascular transport by leading authorities Poses unsolved questions and stimulates future research Provides a new conceptual framework for vascular function in plants **Sieve Elements** H.-D. Behnke, R.D. Sjolund, 2012-12-06 This detailed overview of the structure of the sieve elements of the major plant groups from algae to flowering plants includes extant and extinct groups revealing both common and divergent solutions to the problem of long distance assimilate transport **The Geobiology and Ecology of Metasequoia** Ben A. LePage, Christopher J. Williams, Hong Yang, 2005-03-30 The plant fossil record indicates that the genus Metasequoia was widely distributed throughout the Northern Hemisphere from the early Late Cretaceous to the Pliocene Pleistocene Today the genus has shrunk to one species with approximately 5 000 mature individuals in southeastern China s Xiaohu Valley This book distills the current understanding of the biology ecology and physiology of fossil and living Metasequoia current research directions and problems that remain unresolved *New Perspectives in Wood Anatomy* P. Baas, 2013-03-09 On the occasion of the 50th Anniversary of the International Association of Wood Anatomists several symposia were held during the 13th International Botanical Congress in Sydney August 1981 Extended versions of most of the invited papers presented there and some additional papers on aspects which could not be included in the congress

program constitute the contents of this book which intentionally received the pretentious title New Perspectives in Wood Anatomy To some readers it may seem a paradox that under this heading papers on a diversity of partly traditional wood anatomical subjects are assembled even including two with a historical emphasis However a study of the history of wood anatomy and of how students of that discipline joined forces in an inter national association brings to light many facts and views which deserve the attention of present day and future wood scientists as a potential source of in spiration for their research and organisational work Asia-Pacific Conference on Science and Management of Coastal Environment Yuk-Shan Wong,Nora Fung-Yee Tam,2012-12-06 Human beings have a long historical relationship with the coast Initially it provided food and security later forming important locations for industrial and commercial development Now the emphasis has shifted towards leisure and conservation although the former functions remain crucial However it is only very recently that people have started viewing the coast as a common and valuable resource that requires rational utilisation and scientific management in order to sustain its attractiveness Of course enlightened management comes only through understanding of the complicated coastal regions which enables coastal managers to balance pressures from different sectors and to minimize risks Scientific knowledge will continue to be the most important basis for resolving the conflicts between coastal users and interest groups such as developers and ecologists Coastal management has also shifted from traditional restorative or remedial actions towards planned avoidance of other conflicts Despite rapid advancement in coastal sciences over recent decades most of the major coastal issues have remained outstanding in the agenda Control of shoreline erosion and protecting sea level rise continue to be crucial problems facing coastal scientists Destructive coastal storms still cause tremendous damage particularly in low altitudes Wetland and estuary reclamation have led to the loss of the most valuable estuary wetlands which are required to sustain biological productivity and biodiversity This volume includes papers on marine and coastal pollution eutrophication aquaculture conservation and utilization coastal wetlands and coastal zone management **Ecology of Lianas** Stefan Schnitzer,Frans Bongers,Robyn J. Burnham,Francis E. Putz,2014-10-24 Lianas are woody vines that were the focus of intense study by early ecologists such as Darwin who devoted an entire book to the natural history of climbing plants Over the past quarter century there has been a resurgence in the study of lianas and liana are again recognized as important components of many forests particularly in the tropics The increasing amount of research on lianas has resulted in a fundamentally deeper understanding of liana ecology evolution and life history as well as the myriad roles lianas play in forest dynamics and functioning This book provides insight into the ecology and evolution of lianas their anatomy physiology and natural history their global abundance and distribution and their wide ranging effects on the myriad organisms that inhabit tropical and temperate forests *Systematic Botany* Bharati Bhattacharyya,2005 Modern angiosperm taxonomy or systematics provides a strong foundation for the progress of biological sciences as it incorporates studies on biosystematics chemical and serological evidences numerical taxonomy cytogenetical and ecological evidences

and many others This book accounts for information on classical and fundamental aspects of taxonomy as well as its recent developments Special attention has been paid to the chapters on origin of Angiosperms Theory of Evolution and Evolutionary trends in Angiosperm Flowers The International Code of Botanical Nomenclature Important herbaria Techniques for the preparation storage and study of herbarium specimens Botanical gardens and Taxonomic literature are discussed in detail and includes the study of some selected families belonging to 21 orders For each family general features and evidence from anatomical embryological chromosome numbers and phytochemical data have been added and evolutionary trends discussed Attention has also been drawn to economic importance and geographical distribution of these families Illustrations for some members of these families have also been added [Advances in Ecological Research](#) ,1983-06-23 Advances in Ecological Research **Foundations of Paleoecology** S. Kathleen Lyons,Anna K. Behrensmeyer,Peter J. Wagner,2019-12-13 Approximately 99% of all life that has ever existed is extinct Fortunately these long dead species have left traces of their lives and interactions with other species in the rock record that paleoecologists use to understand how species and ecosystems have changed over time This record of past life allows us to study the dynamic nature of the Earth and gives context to current and future ecological challenges This book brings together forty four classic papers published between 1924 and 1999 that trace the origins and development of paleoecology The articles cross taxonomic groups habitat types geographic areas and time and have made substantial contributions to our knowledge of the evolution of life Encompassing the full breadth of paleoecology the book is divided into six parts community and ecosystem dynamics community reconstruction diversity dynamics paleoenvironmental reconstruction species interaction and taphonomy Each paper is also introduced by a contemporary expert who gives context and explains its importance to ongoing paleoecological research A comprehensive introduction to the field Foundations of Paleoecology will be an essential reference for new students and established paleoecologists alike [New Frontiers in Plant-Environment Interactions](#) Tariq Aftab,2023-11-26 This book provides information about plant environment studies and challenges for plant improvement to achieve food security Plants face a wide range of environmental challenges which are expected to become more intense as a result of global climate change Plant environment interactions play an important role in the functioning of ecosystems There are habitats throughout the world that present challenges to crop plants such as through a lack of water and excessive or toxic salts in the soil Soil properties represent a strong selection pressure for plant diversity and influence the structure of plant communities and participate to the generation and maintenance of biodiversity Plant communities selected by environment grow by modifying soil physical chemical and biological properties with consequent effects on survival and growth of plants The complexity of plant environment interactions has recently been studied by developing a trait based approach in which responses and effects of plants on environment were quantified and modeled This fundamental research on plant environment interaction in ecosystems is essential to transpose knowledges of functional ecology to environmental management Plants have adapted to

an incredible range of environment and extensive researches on ecological and environmental plant physiology have provided mechanistic understanding of the survival distribution productivity and abundance of plant species across the diverse climates of our planet Ecophysiological techniques have greatly advanced our understanding of photosynthesis respiration plant water relations and plant responses to abiotic and biotic stresses from instantaneous to evolutionary timescales Ecophysiological studies also provide the basis for scaling plant physiological processes from the tissue to the canopy ecosystem region and to a large extent the entire globe Given the above the author proposes to bring forth a comprehensive book New Frontiers in Plant Environment Interactions highlighting the various emerging techniques and applications that are currently being used in plant environment interaction research and its future prospects The author is sure that this book caters the need of all those who are working or have interest in the above topic Woody Plant Communities T.T. Kozlowski, 2012-12-02 Water Deficits and Plant Growth Volume VI Woody Plant Communities focuses on the water relations of woody plants in a community context Organized into eight chapters this book begins with a quantitative overview of sources of water available to woody plants Separate chapters follow that discuss the water relations of coniferous temperate hardwood and tropical and subtropical forests and woodlands apple and citrus orchards closely related woody plants and tea plantations For each of these plant communities emphasis is placed on hydrological cycles water use and transpiration absorption of water and effects of environmental factors on soil and plant water balance The effects of water deficits on physiological processes vegetative and reproductive growth yield of harvested products drought resistance and cultural practices affecting plant water balance and yield are also emphasized in this book This volume will be useful to both researchers and those involved in the practice of growing woody plants for wood and fruit crops and for esthetic values Jatropha, Challenges for a New Energy Crop Bir Bahadur, Mulpuri Sujatha, Nicolas Carels, 2012-12-14 Jatropha curcas or Physic Nut is a small tree bush plant that produces fruits under tropical climate The fruits contained seed that are 40% oil rich This oil is excellent for biodiesel The bush is a now new coming crop because it may cope with harsh environmental conditions such as semi aridity and poor land It is considered as one alternative for climate mitigation that does not compete with arable land normally dedicated to food crop and can be used to regain degraded land or fight desertification This bush has been considered seriously by the international community only recently 2006 2008 but worldwide scientists did an outstanding job to draw Jatropha out of its semi wild status and bring it on the industrial scene Problems remains but we have now a comprehensive picture of this crop and almost every technological challenged were addressed From now the job will have to concentrate on breeding in order to domesticate this species Therefore it is the right time to sum up worldwide contributions in a comprehensive book with a breeding looking to improve the chance of this plant to stabilize as a crop and to fulfil with the expectations that humans invested in it A book with this perspective will help international community to give a step on The book will be a broad and comprehensive look on Jatropha until the details

since the book is being contributed by international experts worldwide that have already published works in the international press of Science Illustrations tables geographic maps GPS location etc are added by each contributors according to the feeling they have concerning what they think their contribution should be
