Global Working Group Ecology of Aphidophaga, **Ecology of Coccinellidae** Ivo Hodek, Alois Honek, 2013-03-09 Coccinellids have been very actively studied in the course of the twenty three years since *Biology of Coccinellidae* was published The great amount of new and often very important findings have made the previous book outdated and a new synthesis is needed No other monograph of similar focus and extent has appeared Iablokoff Khnzorian s *Les Coccinelles* 1982 limited to the tribus Coccinellini and Gor don s *The Coccinellidae of America North of Mexico* 1985 both concentrate on taxonomy Majerus beautiful *Ladybirds* 1994 deal specifically with British coccinellids and address chiefly amateur naturalists The focus and the title of the recent book are slightly different from the 1973 volume If a satisfactory comprehensive review of important new findings is attempted the book would grow too much due also to References and Indexes To keep the volume at a tolerable extent the section on larval identification of Palaearctic species has been omitted not much could be added to the previous version of that part anyway However we have kept Kovars chapter on morphology and anatomy because of its relation to feeding and other ecological aspects The chapter on phylogeny was updated also by him Our Polish friend Piotr Ceryngier who has recently specialised in parasites updated perfectly the parts on parasites and pathogens in Chapter 8 We would be glad if their contribution is quoted by their names It seems to us that the remarks contained in the reprinted preface to the previous volume remain pertinent today **Ecology and Behaviour of the Ladybird Beetles (Coccinellidae)** Ivo Hodek, A. Honek, Helmut F. van Emden, 2012-04-19 Ladybirds are probably the best known predators of aphids and coccids in the world though this greatly underestimates the diversity of their biology Maximising their impact on their prey is an important element in modern conservation biological control of indigenous

natural enemies in contrast to the classical approach of releasing alien species Ivo Hodek is one of the most internationally respected experts on coccinellids who has researched these insects for his entire career He has now brought together 14 scientists of international standing to author 12 chapters making this book the definitive treatment of coccinellid biology and ecology This volume covers the rapid scientific developments of recent years in the understanding of coccinellid phylogeny the semiochemicals influencing their behaviour and of molecular genetics Recent insights in relation to intraguild predation and the assessment of the predatory impact of coccinellids are also covered Other special features of the volume are the extensive references covering the literature from both East and West and a taxonomic glossary of the up to date nomenclature for species of coccinellids as well as of other organisms mentioned in the text While aimed at researchers university teachers and agricultural entomologists the book is readable and appropriate for others who just have a liking for these interesting and attractive insects
