Empirical Law and Economics Atsushi Maki, 2024-07-05 Maki provides an empirical analysis of law and economics by reevaluating Myrdal s value premises and Weber s separation of analysis and policy. In modern civil society individuals and businesses conduct economic activities through markets. The mainstream economic theory is the general equilibrium theory which assumes a perfectly competitive market. The upshot is that transactions through competitive markets maximize the economic welfare of society with policies such as deregulation and privatization being implemented with the backing of the law. However in the real economy legal transactions do not always take place and this book analyzes price fixing and bid rigging cases. These cases show that there is a gap between competition philosophy and legislation. Using the real economy as data this book conducts an empirical analysis of law and economics and illustrates issues related to the ideals of economics.

and the proper application of law Accumulating empirical results will provide the means to form a healthy civil society A useful reference for graduate students and researchers in economics and legal research and an interesting read for those who consider economics to be an empirical science

Economic Analysis of Property Law Cases Boudewijn R. A. Bouckaert, 2020-03-02 The discipline of law and economics has earned a reputation for developing plausible and empirically testable theories on the social functions and the impact of legal institutions Property rights are a field in which this has been very successful In this book economic property rights theories are applied to case law in order to examine the practice and solution of real life conflicts The author examines the economic problems which are dealt with in these cases and evaluate the courts decisions from an economic angle Cases are examined from across the UK the US Germany Belgium and Canada to allow international comparisons to be made These comparisons reveal that regardless of the legal system many legal issues have similar economic roots and therefore similar models of economic analysis can be applied The analysis of these cases also shows that the discipline of law and economics is not only successful in developing explanatory models but also useful to generate better considerations and solutions for legal conflicts in individual cases This book aims to bridge the gap between the academic

and professional literature and demonstrate the benefits of the economic analysis of property rights cases to all those who are interested in law and economics

Behavioral Economic Analysis of Institutional Changes Helen Bao, Lei Feng, 2025-09-15 This book examines the evolution of China's rural land system through an integrated lens of institutional and behavioural economics. It traces seventy years of reform from collective farming to market oriented land transfers to explain how central policy, local implementation and farmers' responses interact to shape institutional change. Moving beyond standard accounts focused on property rights and transaction costs, the book introduces a dynamic framework based on Prospect Theory incorporating cognitive biases, social norms and bounded rationality. Drawing on two large scale rural household surveys, the book combines empirical analysis with historical case studies to explore how reforms were received, adapted and resisted. This book will benefit researchers, policymakers and graduate students interested in institutional change, land policy or Chinese rural development. It offers new tools to understand policy implementation in environments marked by uncertainty, decentralisation and informal constraints. By highlighting how behavioural factors mediate formal rules, the book provides insights that extend beyond China, informing the design of effective land and property rights reforms globally.

The Foundations of Behavioral Economic Analysis Sanjit S. Dhami, 2016 It considers the evidence against the exponential discounted utility model and describes several behavioral models such as hyperbolic discounting, attribute based models and the reference time theory. Part IV describes the evidence on classical game theory and considers several models of behavioral game theory including level k and cognitive hierarchy models, quantal response equilibrium and psychological game theory. Part V considers behavioral models of learning that include evolutionary game theory, classical models of learning, experience weighted attraction model, learning direction theory and stochastic social dynamics. Part VI studies the role of emotions among other topics; it considers projection bias, temptation, preferences, happiness, economics and interaction between emotions and cognition. Part VII considers bounded rationality. The three main topics considered are judgment heuristics and biases, mental accounting and behavioral finance.
