History of Economic Thought E. K. Hunt, 2002. Revolutionary advances in biomedical research and information systems technology pose new and difficult issues for American health care policy, especially in the context of managed care. *Health Care Policy in an Age of New Technologies* takes on this challenging array of issues where the dignity of individual life meets the imperatives of the national level health care system: the right to die, rationing of care, organ transplants, experiments with human embryos, genetic research, confidentiality of medical records, and other ethical dilemmas. Chapters on a patient's bill of rights and on medical education and physician training link the book to policy issues of direct concern to the public and practitioners. Throughout the book, the authors place critical questions in their political, legal, social, economic, and ethical context. Each chapter ends with discussion points, and a multimedia bibliography directs readers to relevant films, documentaries, and case studies.

Boland,2014-06-03 First published in 1986 this title argues that the successful development of a new microeconomics requires a deeper understanding of methodological individualism and its role in stability analysis Lawrence Boland expounds a critique of neoclassical models which he contends often fail to include an explicit stability analysis He demonstrates that much of the sophisticated theoretical literature over the past thirty years can be understood as ad hoc attempts to overcome

the deficiencies of such models in the absence of cogent stability analyses In conclusion he explains the need to update the theory taught at universities and to develop a truly individualist version of microeconomics that is consistent with the methodological principles of major neoclassical models An important contribution to economic methodology this work is a highly valuable resource for all students and teachers of economics at the undergraduate level
