Invasive Aquatic Species of Europe. Distribution, Impacts and Management Erkki Leppäkoski, Stephan Gollasch, Sergej Olenin, 2013-06-29 The global scale of alien species invasions is becoming more and more evident in the beginning of the new millennium Though the problem of biological invasions became a rapidly growing research area there are large gaps still both geographically and thematically to be filled in the near future This book is the first attempt to provide an overall picture of aquatic species invasions in Europe Its geographical scope stretches from Irish waters in the west to Volga River and the Caspian Sea in the east and from Mediterranean in the south up to the Arctic coast of Europe Not all parts of the continent could be equally covered as in some countries species invasions are not studied yet The book tends to represent the array of all major European aquatic systems on the broadest geographical and ecological scope possible from fully saline seas semi enclosed brackish water bodies and coastal lagoons to freshwater lakes major river systems and waterways The key objectives include the present status and impacts caused by non native aquatic species in European waters Please note that lengthy species lists submitted for publication and additional information were put on the Internet as the electronic version of these tables benefits from computer assisted search for data <http://www.ku.lt/nemo/EuroAquaInvaders.htm> Altogether more than 100 scientists from 24 countries have joined to synthesize the available information on bioinvasions However the book does not claim to be fully comprehensive

An Assessment of Assessments, 2009 Despite the central role oceans play in the economic environmental and social affairs of the planet's 6.7 billion inhabitants significant gaps exist in our understanding and management of the complex processes at work from the global climate system to the water cycle and circulation of nutrients to changes affecting marine habitats In addition the vastness of the world's oceans have for far too long been perceived as impervious and indestructible to human impact To deal with this situation improved monitoring and observation practices regular assessments to provide a deeper understanding of the status and trends of environmental changes and the know how and ability to prevent mitigate and adapt to these changes are urgently required The UN General Assembly in 2005 recommended that a regular process for the global reporting and assessment of the state of the marine environment including its socio economic aspects Regular Process be initiated The UN Environment Programme UNEP and the Intergovernmental Oceanographic Commission of UNESCO IOC UNESCO were asked to serve as the lead agencies in the start up phase that came to be known as the Assessment of Assessments AoA Under the AoA an Expert Group have developed options and a framework for such a Regular Process which can serve as the mechanism to keep the world's oceans and seas under continuing review
