   Recent Progress in General Topology II M. Husek,J. van Mill,2002-11-13 The book presents surveys describing recent developments in most of the primary subfields of General Topology and its applications to Algebra and Analysis during the last decade It follows freely the previous edition North Holland 1992 Open Problems in Topology North Holland 1990 and Handbook of Set Theoretic Topology North Holland 1984 The book was prepared in connection with the Prague Topological Symposium held in 2001 During the last 10 years the focus in General Topology changed and therefore the selection of topics differs slightly from those chosen in 1992 The following areas experienced significant developments Topological Groups Function Spaces Dimension Theory Hyperspaces Selections Geometric Topology including Infinite Dimensional Topology and the Geometry of Banach Spaces Of course not every important topic could be included in this book Except surveys the book contains several historical essays written by such eminent topologists as R D Anderson W W Comfort M Henriksen S Marde i J Nagata M E Rudin J M Smirnov several reminiscences of L Vietoris are added In addition to extensive author and subject indexes a list of all problems and questions posed in this book are added List of all authors of surveys A Arhangel skii J Baker and K Kunen H Bennett and D Lutzer J Dijkstra and J van Mill A Dow E Glasner G Godefroy G Gruenhage N Hindman and D Strauss L Hola and J Pelant K Kawamura H P Kuenzi W Marciszewski K Martin and M Mislove and M Reed R Pol and H Torunczyk D Repovs and P Semenov D Shakhmatov S Solecki M Tkachenko   **Encyclopaedia of Mathematics** M. Hazewinkel,2013-12-01   Encyclopaedia of Mathematics Michiel Hazewinkel,2012-12-06 This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathe matics It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977 1985 The annotated translation consists of ten volumes including a special index volume There are three kinds of articles in this ENCYCLOPAEDIA First of all there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivi sion has been used The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible On the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science en gineers and teachers of mathematics These articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions The second kind of article of medium length contains more detailed concrete

problems results and techniques   Geometry of Vector Sheaves Anastasios Mallios,2012-12-06 This two volume monograph obtains fundamental notions and results of the standard differential geometry of smooth CINFINITY manifolds without using differential calculus Here the sheaf theoretic character is emphasised This has theoretical advantages such as greater perspective clarity and unification but also practical benefits ranging from elementary particle physics via gauge theories and theoretical cosmology differential spaces to non linear PDEs generalised functions Thus more general applications which are no longer smooth in the classical sense can be coped with The treatise might also be construed as a new systematic endeavour to confront the ever increasing notion that the world around us is far from being smooth enough Audience This work is intended for postgraduate students and researchers whose work involves differential geometry global analysis analysis on manifolds algebraic topology sheaf theory cohomology functional analysis or abstract harmonic analysis

Complete Minimal Surfaces of Finite Total Curvature Kichoon Yang,2013-03-09 This monograph contains an exposition of the theory of minimal surfaces in Euclidean space with an emphasis on complete minimal surfaces of finite total curvature Our exposition is based upon the philosophy that the study of finite total curvature complete minimal surfaces in R3 in large measure coincides with the study of meromorphic functions and linear series on compact Riemann sur faces This philosophy is first indicated in the fundamental theorem of Chern and Osserman A complete minimal surface M immersed in R3 is of finite total curvature if and only if M with its induced conformal structure is conformally equivalent to a compact Riemann surface Mg punctured at a finite set E of points and the tangential Gauss map extends to a holomorphic map Mg _ P2 Thus a finite total curvature complete minimal surface in R3 gives rise to a plane algebraic curve Let Mg denote a fixed but otherwise arbitrary compact Riemann surface of genus g A positive integer r is called a puncture number for Mg if Mg can be conformally immersed into R3 as a complete finite total curvature minimal surface with exactly r punctures the set of all puncture numbers for Mg is denoted by P M For example Jorge and Meeks JM showed by constructing an example g for each r that every positive integer r is a puncture number for the Riemann surface pl   **New Developments in Differential Geometry** L. Rosenfeld,Bill Wiebe,2013-03-09 This book is the result of many years of research in Non Euclidean Geometries and Geometry of Lie groups as well as teaching at Moscow State University 1947 1949 Azerbaijan State University Baku 1950 1955 Kolomna Pedagogical Col lege 1955 1970 Moscow Pedagogical University 1971 1990 and Pennsylvania State University 1990 1995 My first books on Non Euclidean Geometries and Geometry of Lie groups were written in Russian and published in Moscow Non Euclidean Geometries 1955 Ro1 Multidimensional Spaces 1966 Ro2 and Non Euclidean Spaces 1969 Ro3 In Ro1 I considered non Euclidean geometries in the broad sense as geometry of simple Lie groups since classical non Euclidean geometries hyperbolic and elliptic are geometries of simple Lie groups of classes Bn and D and geometries of complex n and quaternionic Hermitian elliptic and hyperbolic spaces are geometries of

simple Lie groups of classes An and en Ro1 contains an exposition of the geometry of classical real non Euclidean spaces and their interpretations as hyperspheres with identified antipodal points in Euclidean or pseudo Euclidean spaces and in projective and conformal spaces Numerous interpretations of various spaces different from our usual space allow us like stereoscopic vision to see many traits of these spaces absent in the usual space **Hamiltonian Mechanical Systems and Geometric Quantization** Mircea Puta,2012-12-06 This volume presents various aspects of the geometry of symplectic and Poisson manifolds and applications in Hamiltonian mechanics and geometric quantization are indicated Chapter 1 presents some general facts about symplectic vector space symplectic manifolds and symplectic reduction Chapter 2 deals with the study of Hamiltonian mechanics Chapter 3 considers some standard facts concerning Lie groups and algebras which lead to the theory of momentum mappings and the Marsden Weinstein reduction Chapters 4 and 5 consider the theory and the stability of equilibrium solutions of Hamilton Poisson mechanical systems Chapters 6 and 7 are devoted to the theory of geometric quantization This leads in Chapter 8 to topics such as foliated cohomology the theory of the Dolbeault Kostant complex and their applications A discussion of the relation between geometric quantization and the Marsden Weinstein reduction is presented in Chapter 9 The final chapter considers extending the theory of geometric quantization to Poisson manifolds via the theory of symplectic groupoids Each chapter concludes with problems and solutions many of which present significant applications and in some cases major theorems For graduate students and researchers whose interests and work involve symplectic geometry and Hamiltonian mechanics **Lightlike Submanifolds of Semi-Riemannian Manifolds and Applications** Krishan L. Duggal,Aurel Bejancu,2013-04-17 This book is about the light like degenerate geometry of submanifolds needed to fill a gap in the general theory of submanifolds The growing importance of light like hypersurfaces in mathematical physics in particular their extensive use in relativity and very limited information available on the general theory of lightlike submanifolds motivated the present authors in 1990 to do collaborative research on the subject matter of this book Based on a series of author s papers Bejancu 3 Bejancu Duggal 1 3 Dug gal 13 Duggal Bejancu 1 2 3 and several other researchers this volume was conceived and developed during the Fall 91 and Fall 94 visits of Bejancu to the University of Windsor Canada The primary difference between the lightlike submanifold and that of its non degenerate counterpart arises due to the fact that in the first case the normal vector bundle intersects with the tangent bundle of the submanifold Thus one fails to use in the usual way the theory of non degenerate submanifolds cf Chen 1 to define the induced geometric objects such as linear connection second fundamental form Gauss and Weingarten equations on the light like submanifold Some work is known on null hypersurfaces and degenerate submanifolds see an up to date list of references on pages 138 and 140 respectively Our approach in this book has the following outstanding features a It is the first ever attempt of an up to date information on null curves lightlike hypersur faces and submanifolds consistent with the theory of non degenerate submanifolds **Continuous Selections of Multivalued Mappings** D. Repovs,P.V. Semenov,2013-04-17 This book is

dedicated to the theory of continuous selections of multi valued mappings a classical area of mathematics as far as the formulation of its fundamental problems and methods of solutions are concerned as well as J n area which has been intensively developing in recent decades and has found various applications in general topology theory of absolute retracts and infinite dimensional manifolds geometric topology fixed point theory functional and convex analysis game theory mathematical economics and other branches of modern mathematics The fundamental results in this the ory were laid down in the mid 1950 s by E Michael The book consists of relatively independent three parts Part A Theory Part B Results and Part C Applications We shall refer to these parts simply by their names The target audience for the first part are students of mathematics in their senior year or in their first year of graduate school who wish to get familiar with the foundations of this theory The goal of the second part is to give a comprehensive survey of the existing results on continuous selections of multivalued mappings It is intended for specialists in this area as well as for those who have mastered the material of the first part of the book In the third part we present important examples of applications of continuous selections We have chosen examples which are sufficiently interesting and have played in some sense key role in the corresponding areas of mathematics   Algorithmic and Computer Methods for Three-Manifolds A.T. Bogachev,2024-07-29 This book provides a thorough exposition of the main concepts and results related to various types of convergence of measures arising in measure theory probability theory functional analysis partial differential equations mathematical physics and other theoretical and applied fields Particular attention is given to weak convergence of measures The principal material is oriented toward a broad circle of readers dealing with convergence in distribution of random variables and weak convergence of measures The book contains the necessary background from measure theory and functional analysis Large complementary sections aimed at researchers present the most important recent achievements More than 100 exercises ranging from easy introductory exercises to rather difficult problems for experienced readers are given with hints solutions or references Historic and bibliographic comments are included The target readership includes mathematicians and physicists whose research is related to probability theory
