Catalano,Antonio Nunziata,Alfredo Siani,2009-12-19 It is a remarkable observation that human creativity can be fostered by spectacular scenery itself usually the result of tectonic activity which raises mountains of beauty but carries the sting of earthquakes and eruptions Think of Silicon Valley in California or of the Tokyo Kyoto corridor in Eastern Japan Another is the glorious Amalfi coast around Naples where the authors of this new textbook work in the shadow of Mount Vesuvius Is it the beauty that inspires or the tension of knowing that one's life may be shattered at any moment if a volcanic or tectonic disaster strikes Whatever the explanation these authors passion for their subject shines through and their work carries not only their enthusiasm but also a rare beauty in its construction format for it is a joy to hold and behold with its beautiful all colour printing and abundant illustrations of excellent quality mainly of course ultrasound images but also corresponding CT scans and numerous elegant diagrams But is there a need for a textbook on ultrasound in oncology Doesn't everyone accept that CT or PET CT and sometimes MR have nailed the problem of oncologic imaging Well while CT is undoubtedly the core

imaging technique for the detection staging treatment planning and follow up of tumours there remain many applications for modern ultrasound as readers of this textbook will be persuaded
