Komar Kawatra,2020-01-27 Updating content from the author s 2001 book Coal Desulfurization this new title focuses on CO₂ sequestration and utilization It includes information on the theory and practical approaches to CO₂ capture and recent advances in the use of sequestered CO₂ Avoiding these pollutants requires either forgetting about the 250 billion tons of coal reserves the United States possesses or capturing and utilizing the pollutants in a profitable and environmentally responsible fashion The book covers postcombustion and precombustion capture approaches for coal and postcombustion capture can be generalized to many other fuels Recent practical implementations at full scale power facilities around the world are discussed The book covers sequestering CO₂ via underground oceanic biological and other long term CO₂ storage methods It also includes recent advances in utilizing CO₂ for enhanced oil recovery advances in storage with depleted oil and gas reservoirs and deep saline aquifers and additional topics The book also examines specific applications of pure CO₂ and covers chemical conversion of CO₂ to useful compounds It answers questions like Can we create methanol from coal or Can we create ethanol from coal It is found that methanol and ethanol cannot be sustainably produced from coal power alone However oxalic acid can be created at a much lower energy cost than methanol or ethanol Oxalic acid can be used to extract rare earths which are not currently produced anywhere in the United States but are typically concentrated in coal ash Aimed at researchers and industry professionals in chemical environmental and energy engineering this book provides insight and inspiration into capturing CO₂ not merely as a response to regulatory pressure and climate change but as an inherently profitable and valuable venture Coal Flotation and Fine Coal Utilization J. NMR tandem mass spectrometry physics liquefaction catalytic reactions devolatilization and combustion Of particular interest in this part is the frequent inclusion in many of the contributions of the authors own research results hitherto unpublished elsewhere Good examples of this are the work on magnetic susceptibility of coal a new branch of coal physics and the article on tandem mass spectrometry a new branch of analytical chemistry of coal The second part contains twelve original articles covering characterization and chemistry of coal structure and depolymerization analytical methods including gas chromatography mass spectrometry gas liquid chromatography size exclusion chromatography and analysis of oxygen by fast neutron activation Physical chemistry and physical properties of coal are dealt with in articles on coal slurry electrolysis oxidation thermal decomposition absorption and diffusion

Spectroscopic Analysis of Coal Liquids John R.

Kershaw,1989 This book comprehensively and critically reviews the analysis of coal derived liquids by modern spectroscopic techniques All the major techniques used in the analysis of coal liquids are included with detailed chapters on mass infrared ultraviolet and luminescence nuclear magnetic resonance and electron spin resonance spectroscopy Each method is critically evaluated and the limitations and problems that the complexity of typical coal liquids impose on each technique are discussed The book also includes a discussion of solvent fractionation chromatographic separations and the pyrolysis and hydrolysis of coal liquids A detailed review of the composition of coal liquids from various coal liquefaction processes and a brief introduction to coal science are also included This is the only comprehensive coverage of the spectroscopic analysis of coal liquids It also contains a wealth of information on the composition and properties of coal liquids produced from various coal types under a variety of processing conditions These two features alone should make it essential reading for all professionals involved in liquid fuels research

Energy Resources and

Systems Tushar Ghosh,Mark Prelas,2009-06-17 In the lifetimes of the authors the world and especially the United States have received three significant wake up calls on energy production and consumption The first of these occurred on October 15 1973 when the Yom Kippur War began with an attack by Syria and Egypt on Israel The United States and many western countries supported Israel Because of the western support of Israel several Arab oil exporting nations imposed an oil embargo on the west These nations withheld five million barrels of oil per day Other countries made up about one million barrels of oil per day but the net loss of four million barrels of oil production per day extended through March of 1974 This represented 7% of the free world s i e excluding the USSR oil production In 1972 the price of crude oil was about 3 00 per barrel and by the end of 1974 the price of oil had risen by a factor of 4 to over 12 00 This resulted in one of the worst recessions in the post World War II era As a result there was a movement in the United States to become energy independent At that time the United States imported about one third of its oil about five million barrels per day After the embargo was lifted the world chose to ignore the wake up call and went on with business as usual
