Funktionalanalysis und Numerische Mathematik Lothar Collatz, 2013-03-08 **Introduction to the Theory of Singular Integral Operators with Shift** Viktor G. Kravchenko, Georgii S. Litvinchuk, 2012-12-06 This book is devoted to the Fredholm theory of singular integral operators with shift in L_p 1 **Delay Equations, Approximation and Application** MEINARDUS, NÜRNBERGER, 2013-03-08 The international symposium held in October 1984 at the University of Mannheim was the first with the special aim to expose the connection of the Theory of Delay Equations and Approximation Theory with the emphasis on constructive methods and applications Although the separate character of both domains is reflected by their historical development the latest research shows that the numerical treatment of Delay Equations leads to various approximation and optimization problems An introductory survey of this circle of problems written by the editors is included at the beginning of the book Delay Equations have their origin in domains of applications such as physics engineering biology medicine and economics They appear in connection with the fundamental problem to analyse a retarded process from the real world to develop a corresponding mathematical model and to determine the future behavior Thirty mathematicians attended the conference coming from Germany West and Eastern Europe and the United States more than twenty of them presented a research talk The lectures about Delay Equations were mainly oriented on the following subjects single step multi step and spline methods monotonicity methods for error estimations asymptotic behavior 10 and periodicity of solutions The topics of the talks on Approximation Theory covered different aspects of approximation by polynomials splines and rational functions and their numerical realization Additionally included in the scientific program was a special session on Open Problems where several suggestions were made for further research concerning both fields *Numerische Methoden bei Differentialgleichungen und mit funktionalanalytischen Hilfsmitteln* J. Albrecht, L. Collatz, 2013-12-19 **Numerical Methods of Approximation Theory** Lothar Collatz, Günther Meinardus, Helmut Werner, 1972 **Numerische Methoden der Approximation und semi-infiniten Optimierung** Rainer Hettich, Peter Zencke, 2014-07-08 **Developments in Reliable Computing** Tibor Csendes, 2013-04-17 The SCAN conference the International Symposium on Scientific Computing Computer Arithmetic and Validated Numerics takes place biannually under the joint auspices of GAMM Gesellschaft für Angewandte Mathematik und Mechanik and IMACS International Association for Mathematics and Computers in Simulation SCAN 98 attracted more than 100 participants from 21 countries all over the world During the four days from September 22 to 25 nine highlighted plenary lectures and over 70 contributed talks were given These figures indicate a large participation which was partly caused by the attraction of the organizing country Hungary but also the effective support system have contributed to the success The conference was substantially supported by the Hungarian Research Fund OTKA GAMM the National Technology Development Board OMFB and by the József Attila University Due to this funding it was possible to subsidize the participation of over 20 scientists mainly from Eastern European countries It is important that the

possibly first participation of 6 young researchers was made possible due to the obtained support The number of East European participants was relatively high These results are especially valuable since in contrast to the usual 2 years period the present meeting was organized just one year after the last SCAN xx conference
