J. Bryden, Science Museum (Great Britain), 1992 The Domesday Book of historical scientific instruments in the United Kingdom and Eire At its core is an inventory in which are

individually described some 3700 instruments from collections throughout the British Isles. Astronomical, mathematical, optical and other types of instrument are all covered as well as philosophical, physical and chemical apparatus. The inventory is preceded by a substantial glossary in which more than 50 categories of instrument are described, from abacus and air pump to waywiser and wheel cutting engine. *The Instrument of Science* Darrell P. Rowbottom, 2019-03-25. Roughly instrumentalism is the view that science is primarily and should primarily be an instrument for furthering our practical ends. It has fallen out of favour because historically influential variants of the view, such as logical positivism, suffered from serious defects. In this book, however, Darrell P. Rowbottom develops a new form of instrumentalism which is more sophisticated and resilient than its predecessors. This position, cognitive instrumentalism, involves three core theses. First, science makes theoretical progress primarily when it furnishes us with more predictive power or understanding concerning observable things. Second, scientific discourse concerning unobservable things should only be taken literally in so far as it involves observable properties or analogies with observable things. Third, scientific claims about unobservable things are probably neither approximately true nor liable to change in such a way as to increase in truthlikeness. There are examples from science throughout the book, and Rowbottom demonstrates at length how cognitive instrumentalism fits with the development of late nineteenth and early twentieth century chemistry and physics, and especially atomic theory. Drawing upon this history, Rowbottom also argues that there is a kind of understanding, empirical understanding, which we can achieve without having true or even approximately true representations of unobservable things. In closing the book, he sets forth his view on how the distinction between the observable and unobservable may be drawn and compares cognitive instrumentalism with key contemporary alternatives, such as structural realism, constructive empiricism, and semirealism. Overall, this book offers a strong defence of instrumentalism that will be of interest to scholars and students working on the debate about realism in philosophy of science.

*How Scientific Instruments Have Changed Hands*, 2016-09-12. This collection of essays discusses the marketing of scientific and medical instruments from the eighteenth century to the First World War. The evidence presented here is derived from sources as diverse as contemporary trade literature, through newspaper advertisements to rarely surviving inventories and from the instruments themselves. The picture may not yet be complete, but it has been acknowledged that it is more complex than sketched out twenty-five or even fifty years ago. Here is a collection of case studies from the United Kingdom, the Americas, and Europe, showing instruments moving from maker to market place and to some extent what happened next. Contributors are Alexi Baker, Paolo Brenni, Laura Chazaro, Gloria Clifton, Peggy Aldrich Kidwell, Richard L. Kremer, A. D. Morrison, Low Joshua Nall, Sara J. Schechner, and Liba Taub. *Science of Percussion Instruments* Thomas D. Rossing, 2000. What singles this book out is the sheer diversity of instruments covered; this is a very welcome book. It is fair to say that the science of percussion instruments would not have advanced anywhere near so far without the tireless enthusiasm and passion of Rossing and his students. *Nature* 2001. It forms a very nice survey work on an

entire class of musical instruments I recommend it to anyone interested in acoustics and the physics of musical instruments

Hankins,Robert J. Silverman,2014-07-14 Thomas Hankins and Robert Silverman investigate an array of instruments from the seventeenth through the nineteenth century that seem at first to be marginal to science magnetic clocks that were said to operate by the movements of sunflower seeds magic lanterns ocular harpsichords machines that played different colored lights in harmonious mixtures Aeolian harps a form of wind chime and other instruments of natural magic designed to produce wondrous effects By looking at these and the first recording instruments the stereoscope and speaking machines the authors show that scientific instruments first made their appearance as devices used to evoke wonder in the beholder as in works of magic and the theater The authors also demonstrate that these instruments even though they were often tricks were seen by their inventors as more than trickery In the view of Athanasius Kircher for instance the sunflower clock was not merely a hoax but an effort to demonstrate however fraudulently his truly held belief that the ability of a flower to follow the sun was due to the same cosmic magnetic influence

as that which moved the planets and caused the rotation of the earth The marvels revealed in this work raise and answer questions about the connections between natural science and natural magic the meaning of demonstration the role of language and the senses in science and the connections among art music literature and natural science Originally published in 1995 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

**Early American Scientific Instruments and Their Makers** Silvio A. Bedini, 1964 Within recent years fairly exhaustive studies have been made on many aspects on American Science and Technology To make a comprehensive study of American scientific instruments and instrument makers in the American Colonies is no simple matter partly because of an indifference to the subject in the past and partly because of the great volume of sources that must be sifted to accomplish it
