Secondary Education Issues and Challenges Hans V. Knudsen, 2008

Secondary education is the final stage of compulsory education preceded by primary education and followed by higher education. It is characterised by transition from the typically compulsory comprehensive primary education for minors to the optional selective tertiary post secondary or higher education e.g. university vocational school for adults. Depending on the system, schools for this period or a part of it may be called secondary schools, high schools, gymnasiums, lyceums, middle schools, colleges, vocational schools, and preparatory schools, and the exact meaning of any of these varies between the systems. The exact boundary between primary and secondary education varies from country to country and even within them, but is generally around the fifth to the tenth year of education. Secondary education occurs mainly during the teenage years. In the United States and Canada, primary and secondary education together are sometimes referred to as K-12 education. The purpose of secondary education can be to give common knowledge to prepare for either higher education or vocational education, or to train directly for a profession. This new book presents the latest research in the field.

Harvest of research outcomes to confirm achievement of the millennium development goals Simeon O. Jekayinfa, 2017-09-15

In 2000, the leaders of member states of the United Nations adopted the Millennium Declaration, which set out a series of clear commitments, goals, and targets to achieve Human Development. These ambitious goals were subsequently refined into eight Millennium Development Goals (MDGs) designed to provide a framework for accountability, donor coordination, and resource mobilization. The MDGs are: Eradicate extreme poverty and hunger; achieve universal primary education; promote gender equality and empower women; reduce child mortality; improve maternal health; combat HIV/AIDS, malaria, and other diseases; ensure environmental sustainability; and develop a global partnership for development. The first seven of these Goals are concerned with outcomes, identifying the progress towards certain standards of human well-being and decent living, which should be achieved globally and nationally by 2015. The eighth Goal is concerned with relationships, identifying various aspects of a global partnership for development, which must be forged to support the realization of these poverty reduction, human development, and environmental sustainability standards. The MDGs provide opportunities to start working from real-life development problems. Addressing these problems requires multidisciplinary approaches that combine the natural sciences, the life sciences, and technical approaches with social science approaches. The challenge is to integrate social, economic, political, and institutional concerns into research strategy. To be able to achieve this, there is a need to establish a linking pin between research policy and practice in Nigeria. The aim of such a linking pin would be to synthesize research outcomes on specific MDG-related topics and to translate these into implications for policy and decision making through easily accessible gathering where individual stakeholders can air their views. The articles contained in this book address research outcomes from stakeholders: Sociologists, Economists, Agronomists, Agricultural Engineers, Civil Engineers.
