Integrated Object Modelling An Executable Specification Framework For Business Analysis And Information System Design:

Integrated Object Modelling Guus J. Ramackers, 1994 A new foundation for information system development is required in order to facilitate systems with a better organizational fit increased user friendliness and improved flexibility This study describes an integrated approach to business and information system development that permits this The specification framework developed enables vertical integration of business user and developer modelling worlds as well as horizontal integration of data behaviour and process perspectives Both forms of integration are addressed on the basis of an object oriented approach with an underlying mathematical foundation in high level Petri nets On the basis of this theory integrated CASE tools can provide new ways of visualizing and manipulating specification models Model execution permits simulation and testing of business activities user interface and system design by means of interactive graphical animation

Information System Concepts Eckhard D. Falkenberg, Wolfgang Hesse, Antoni Olive, 2016-02-02 This is a compilation of papers presented at the Information System Concepts conference in Marburg Germany The special focus is consolidation and harmonisation of the numerous and widely diverging views in the field of information systems This issue has become a hot topic as many leading information system researchers and practitioners come to realise the importance of better communication among the members of the information systems community and of a better scientific foundation of this rapidly evolving field

UML 2000 - The Unified Modeling Language: Advancing the Standard Andy Evans, Stuart Kent, Bran Selic, 2003-06-29 This book constitutes the refereed proceedings of the Third International Conference on the Unified Modeling Language 2000 held in York UK in October 2000 The 36 revised full papers presented together with two invited papers and three panel outlines were carefully reviewed and selected from 102 abstracts and 82 papers submitted The book offers topical sections on use cases enterprise applications applications roles OCL tools meta modeling behavioral modeling methodology actions and constraints patterns architecture and state charts

Information Modelling and Knowledge Bases VI Hannu Kangassalo, 1995 This sixth IMKB volume attempts to synthesize research done over a longer period of time in a reference book format The work presents in survey articles the efforts to study foundations and applications of conceptual modelling in various environments The motivation of these efforts is the fact that conceptual modelling and knowledge representation together with various kinds of inference systems are important subfields in the design and use of information systems The modelling problem is essential in many disciplines such as database design knowledge engineering logic artificial intelligence cognitive science philosophy linguistics etc A central and comprehensive bibliography is included

Perspectives on Business Modelling Anders G. Nilsson, Christofer Tolis, Christer Nellborn, 2012-12-06 How can established models and methods be employed for the understanding and change of organisations One of the key issues presented in this book is bridging the communication gap between business leaders and IT experts in companies and public services This is

facilitated by combining different models for the development of corporate strategies business processes and information support The leading idea behind this book is to present different perspectives on business modelling based on established theories and practical experiences The book offers advanced knowledge and relevant information on the key issues in business modelling for today's organisations , *Information System Concepts: An Integrated Discipline Emerging* Eckhard D. Falkenberg, Kalle Lyytinen, Alexander A. Verrijn-Stuart, 2013-03-09 This volume contains the invited paper the reviewed research papers the discussants' comments on the latter and the workshop memoranda of the fourth IFIP WG 8.1 International Working Conference on Information System Concepts with the subtitle *An Integrated Discipline Emerging* ISC04 It was held in Leiden The Netherlands 20-22 September 1999 The previous three ISCO conferences were subtitled *An In depth Analysis Improving the Understanding and Towards a Consolidation of Views* Their proceedings were published in 1989 1992 and 1995 respectively The ISCO conferences were instigated by the former Task Group FRISCO an acronym for *FR*amework of *I*nformation *S*ystem *C*oncepts charged by the IFIP Working Group 8.1 with the task of proposing a conceptual framework for the information system field Its report entitled *A Framework of Information System Concepts* the FRISCO Report for short is available on the World Wide Web via the address <http://www.wi.leidenuniv.nl/verrynstl/frisco.html> or may be downloaded directly as a condensed Word 6 file from <ftp://ftp.leidenuniv.nl/pub/rullfri/full.zip> The FRISCO Report forms a significant contribution to the long lasting quest of our community towards developing a scientific outlook on the field of information systems Clarifying the varied nature of many diverging views some of which may not easily be reconciled the report does propose a coherent consistent and partially formalised framework of concepts *Databases and Information Systems IV* Olegas Vasilecas, Johann Eder, Albertas Caplinskas, 2007 Contains papers that present original results in business modeling and enterprise engineering database research data engineering data quality and data analysis IS engineering Web engineering and application of AI methods **Methods and Associated Tools for the Information Systems Life Cycle** A. A. Verrijn-Stuart, T. William Olle, 1994 In the early days of methods the distinction between the process and the product was unclear Sometimes consideration was concentrated on the problems of what models should be formulated at other times on how such results were to be achieved The methods and tools as the two factors became known enjoyed increasing attention over the years though emphasis now as then is almost always placed on the outcome rather than on the ways towards it This publication explores methods and associated tools in the perspective of the information systems life cycle It discusses the need for method flexibility within a design base of certain strict standards and with respect given to the potential harmonization of existing methods The contribution of a broad range of specialists ensures that papers extend across the various facets of the discipline Business Process Re-engineering B. C. Glasson, 1994 The focus of this publication is BPR Business Process Re-engineering and the challenges and opportunities it brings to the field of information systems The key to successful BPR from an information systems perspective is perceived to lie in integration Papers included

in the book accordingly consider the following three areas both individually and in combination Business Process Re engineering Information Systems Opportunities or Challenges Information Systems Integration Business Process Re engineering is the restructuring of organizational processes through the innovative use of information systems and technology IS T The aim is to refit or revamp an organization to survive today s economic downturn and to emerge refreshed and re vitalized to meet its social obligations and accept its economic challenges into the next century Information systems opportunities and challenges facing business process re engineers revolve around integration It is believed that unidimensional specialized segmented and piecemeal approaches have been adopted in IS T which do not work If IS T is to achieve its full potential for social and economic good there is little need for holistic multi dimensional comprehensive approaches IS T researchers and practitioners should look to integrate their efforts with those of others in at least three ways Integrating theory and practice will encourage relevant research and more rapid technology transfer Integrating technical and social aspects will help alleviate those implementation issues that have bedevilled IS T for decades Integrating applications and subject matter will result in synergistic multi disciplinary approaches and solutions combining the interests of the many specialists involved in the field The broad ranging examination of these factors offered by the book highlights the overall need for information systems and technology integration if active responses to the opportunities and challenges presented by Business Process Re engineering are to be achieved **The Unified Modeling Language** ,2000

Conceptual Modeling for E-Business and the Web Stephen W. Liddle,Heinrich C. Mayr,Bernhard Thalheim,2003-06-29 The objective of the workshops associated with the ER2000 19th International Conference on Conceptual Modeling was to give participants the opportunity to present and discuss emerging hot topics thus adding new perspectives to conceptual modeling This attracts communities which have begun to or which have already recognized the importance of conceptual modeling for solving their problems To meet this objective we selected the following two topics Conceptual Modeling Approaches for E Business eCOMO2000 aimed at studying the application of conceptual modeling techniques speci cally to e business The World Wide Web and Conceptual Modeling WCM2000 which analyzes how conceptual modeling can help address the challenges of Web devel pment management and use eCOMO2000 is the rst international workshop on Conceptual Modeling proaches for E Business It was intended to work out and to discuss the actual state of research on conceptual modeling aspects and methods within the realm of the network economy which is driven by both traditionally organized ent prises and dynamic networks Following the philosophy of the ER workshops the selection of eCOMO contributions was done very carefully and restrictively six accepted papers out of thirteen submissions in order to guarantee an excellent workshop program We are deeply indebted to the authors and to the members of the program committee whose work resulted in this outstanding program **Enterprise, Business-Process and Information Systems Modeling** Terry Halpin,Selmin Nurcan,John Krogstie,Pnina Soffer,Erik Proper,Rainer Schmidt,Ilia Bider,2011-06-17 This book contains the refereed

Model-Driven Design Using Business Patterns Pavel Hruby, 2006-08-02 Business applications are designed using profound knowledge about the business domain such as domain objects fundamental domain related principles and domain patterns Nonetheless the pattern community's ideas for software engineering have not impacted at the application level they are still mostly used for technical problems This book takes exactly this step it shows you how to apply the pattern ideas in business applications and presents more than 20 structural and behavioral business patterns that use the REA resources events agents pattern as a common backbone If you are a developer working on business frameworks you can use the patterns presented to derive the right abstractions e.g. business objects and to design and ensure that the meta rules e.g. process patterns are followed by the developers of the actual applications And if you are an application developer you can use these patterns to design your business application to ensure that it does not violate the domain rules and to adapt the application to changing requirements without the need to change the overall architecture As with patterns in general this approach allows for both more flexible and more solid software architectures and hence better software quality It's a great book marvelous in breadth and depth An impressive achievement I particularly liked the modeling handbook examples Bob Haugen Business Technology Consultant and Contributor to REA standardization in ISO UN CEFACT and ebXML UK I enjoyed reading it very much it gave many new insights into REA and its applications Paul Johannesson Stockholm University and Royal Institute of Technology Sweden This book by Pavel Hruby is destined to become a landmark in business modeling Pavel heralds the replacement of traditional workflow oriented modeling with a new breed of approaches that focus on delivering change resilient and highly reusable business models I highly recommend this book to you Krzysztof Czarnecki University of Waterloo Canada
