Dagli, David L Enke, K Mark Bryden, Halil Ceylan, Mitsuo Gen, 2009-01-30 The papers compiled in this book focus of use of computational intelligence techniques in architecting engineering systems As the world is moving towards a networked society business and government applications require integrated systems that exhibit intelligent behavior The dynamically changing environmental and operational conditions necessitate a need for system architectures that will be effective for the duration of the mission but evolve to new system architectures as the mission changes These systems necessitate the use of computational intelligence in these designs to meet the consumer needs of adapting and responding to changing conditions **BOOK JACKET** Artificial Neural Networks for Intelligent Manufacturing C.H. Dagli, 2012-12-06 The quest for building systems that can function automatically has attracted a lot of attention over the centuries and created continuous research activities As users of these systems we have never been satisfied and demand more from the artifacts that are designed and manufactured The current trend is to build autonomous systems that can adapt to changes in their environment While there is a lot to be done before we reach this point it is not possible to separate manufacturing systems from this trend The desire to achieve fully automated manufacturing systems is here to stay Manufacturing systems of the twenty first century will demand more flexibility in product design process planning scheduling and process control This may well be achieved through integrated software and hardware archi tectures that generate current decisions based on information collected from manufacturing systems environment and execute these decisions by converting them into signals transferred through communication network Manufacturing technology has not yet reached this state However the urge for achieving this goal is transferred into the term Intelligent Systems that we started to use more in late 1980s Knowledge based systems our first efforts in this endeavor were not sufficient to generate the Intelligence required our quest still continues Artificial neural network technology is becoming an integral part of intelligent manufacturing systems and will have a profound impact on the design of autonomous engineering systems over the next few years
