Intelligent Memory:

Intelligent Memory Systems Frederic T. Chong, Christoforos Kozyrakis, Mark Oskin, 2003-06-29 We are pleased to present this collection of papers from the Second Workshop on Intelligent Memory Systems Increasing die densities and inter chip communication costs continue to fuel interest in intelligent memory systems Since the First Workshop on Mixing Logic and DRAM in 1997 technologies and systems for computation in memory have developed quickly The focus of this workshop was to bring together researchers from academia and industry to discuss recent progress and future goals The program committee selected 8 papers and 6 poster session abstracts from 29 submissions for inclusion in the workshop Four to five members of the program committee reviewed each submission and their reviews were used to numerically rank them and guide the selection process We believe that the resulting program is of the highest quality and interest possible The selected papers cover a wide range of research topics such as circuit technology processor and memory system architecture compilers operating systems and applications They also present a mix of mature projects work in progress and new research ideas The workshop also included two invited talks Dr Subramanian Iyer IBM Microelectronics provided an overview of embedded memory technology and its potential Dr Mark Snir IBM Research presented the Blue Gene an aggressive supercomputer system based on intelligent memory technology

Strategic Intuition William Duggan, 2013-06-18 How Aha really happens When do you get your best ideas You probably answer At night or In the shower or Stuck in traffic You get a flash of insight Things come together in your mind You connect the dots You say to yourself Aha I see what to do Brain science now reveals how these flashes of insight happen It's a special form of intuition We call it strategic intuition because it gives you an idea for action a strategy Brain science tells us there are three kinds of intuition ordinary expert and strategic Ordinary intuition is just a feeling a gut instinct Expert intuition is snap judgments when you instantly recognize something familiar the way a tennis pro knows where the ball will go from the arc and speed of the opponent's racket Malcolm Gladwell wrote about this kind of intuition in Blink The third kind strategic intuition is not a

vague feeling like ordinary intuition Strategic intuition is a clear thought And it s not fast like expert intuition It s slow That flash of insight you had last night might solve a problem that s been on your mind for a month And it doesn t happen in familiar situations like a tennis match Strategic intuition works in new situations That s when you need it most Everyone knows you need creative thinking or entrepreneurial thinking or innovative thinking or strategic thinking to succeed in the modern world All these kinds of thinking happen through flashes of insight strategic intuition And now that we know how it works you can learn to do it better That s what this book is about Over the past ten years William Duggan has conducted pioneering research on strategic intuition and for the past three years has taught a popular course at Columbia Business School on the subject He now gives us this eye opening book that shows how strategic intuition lies at the heart of great achievements throughout human history the scientific and computer revolutions women s suffrage the civil rights movement modern art microfinance in poor countries and more Considering the achievements of people and organizations from Bill Gates to Google Copernicus to Martin Luther King Picasso to Patton you ll never think the same way about strategy again Three kinds of strategic ideas apply to human achievement Strategic analysis where you study the situation you face Strategic intuition where you get a creative idea for what to do Strategic planning where you work out the details of how to do it There is no shortage of books about strategic analysis and strategic planning This new book by William Duggan is the first full treatment of strategic intuition It s the missing piece of the strategy puzzle that makes essential reading for anyone interested in achieving more in any field of human endeavor

On Intelligence Jeff Hawkins,Sandra Blakeslee,2024-09-04 The inventor of the PalmPilot shares a compelling new theory of intelligence brain function and the future of artificial intelligence Tech innovator Jeff Hawkins reshaped our relationship to computers with devices like the PalmPilot Now he stands ready to revolutionize both neuroscience and computing in one stroke with a new understanding of intelligence itself In this book Hawkins develops a powerful theory of human cognition and explains how based on his theory we can finally build intelligent machines According to Hawkins the brain is a complex

system that remembers sequences of events and their nested relationships This style of organization reflects the true structure of the world and allows us to make increasingly accurate predictions This memory prediction process in turn forms the basis of intelligence perception creativity and even consciousness In an engaging style accessible to the general reader Hawkins shows how a clear understanding of brain function can be applied to building intelligent machines in silicon that will exceed our human ability in surprising ways Written with acclaimed science writer Sandra Blakeslee *On Intelligence* is a landmark book in its scope and clarity Brilliant and imbued with startling clarity the most important book in neuroscience psychology and artificial intelligence in a generation **Malcolm Young University of Newcastle**

High Performance Memory Systems Haldun Hadimioglu, David Kaeli, Jeffrey Kusk, Ashwini Nanda, Josep Torrellas, 2011-06-27 The State of Memory Technology Over the past decade there has been rapid growth in the speed of microprocessors CPU speeds are approximately doubling every eighteen months while main memory speed doubles about every ten years The International Technology Roadmap for Semiconductors ITRS study suggests that memory will remain on its current growth path The ITRS short and long term targets indicate continued scaling improvements at about the current rate by 2016 This translates to bit densities increasing at two times every two years until the introduction of 8 gigabit dynamic random access memory DRAM chips after which densities will increase four times every five years A similar growth pattern is forecast for other high density chip areas and high performance logic e.g. microprocessors and application specific integrated circuits ASICs In the future molecular devices 64 gigabit DRAMs and 28 GHz clock signals are targeted Although densities continue to grow we still do not see significant advances that will improve memory speed These trends have created a problem that has been labeled the Memory Wall or Memory Gap

Smart Materials for Science and Engineering Upendra

Kumar,Piyush Kumar Sonkar,2024-06-05 SMART MATERIALS FOR SCIENCE AND ENGINEERING Smart materials also known as advanced or creative materials are described as advanced materials that react intuitively to environmental changes or as materials that can return to their original shape in response to certain stimuli Smart materials are classified as either active or passive based on their characteristics There are two types of active materials The first kind cannot change its characteristics when subjected to outside stimuli for example photochromatic spectacles that only alter their color when exposed to sunlight The other which includes piezoelectric materials can change one sort of energy thermal electrical chemical mechanical or optical into another When subjected to external pressure it can generate an electric charge As an example optical fibers can transmit electromagnetic waves In contrast passive smart materials can transmit a specific sort of energy They have some amazing qualities that set them apart from other materials such as transiency meaning they can react to different kinds of external stimuli immediately self actuation or the capacity to change their appearance and shape selectivity where the response is divided and expected directness when the response is limited to the activating event shape changing where the material can change its shape to external stimuli their ability to determine their own health also known as self diagnosis and their ability to self heal The ability to synthesize novel materials has substantially progressed thanks to science and technology over the past 20 years They fall mostly into the following four categories polymers ceramics metals and smart materials Among these smart materials are gaining popularity since they have more uses than conventional materials Smart materials are unusual substances that have the ability to alter their properties such as those that can immediately change their phase when placed near a magnet or their shape simply by applying heat Humanity will be significantly impacted by this new era of smart materials For instance some of them can adapt their properties to the environment some have sensory capabilities some can repair themselves automatically and some can degrade themselves

These extraordinary properties of smart materials will have an effect on all facets of civilization. There are many different types of intelligent materials including magnetorheological materials, electro-rheostat materials, shape memory alloys, piezoelectric materials, and more. This book describes many forms of smart materials and their possible uses in various fields. A literature survey discusses the different types of smart materials such as based ceramics, polymers, and organic compounds, and their needs, advantages, disadvantages, and applications will be comprehensively discussed. A discussion of well-established smart materials including piezoelectric, magnetostrictive, shape memory alloy, electro-rheological fluid, and magnetorheological fluid materials will be discussed with their present prospects.

Reconfigurable Computing Scott Hauck, André DeHon, 2010-07-26 Reconfigurable Computing marks a revolutionary and hot topic that bridges the gap between the separate worlds of hardware and software design. The key feature of reconfigurable computing is its groundbreaking ability to perform computations in hardware to increase performance while retaining the flexibility of a software solution. Reconfigurable computers serve as affordable, fast, and accurate tools for developing designs ranging from single-chip architectures to multi-chip and embedded systems. Scott Hauck and Andre DeHon have assembled a group of the key experts in the fields of both hardware and software computing to provide an introduction to the entire range of issues relating to reconfigurable computing. FPGAs (field-programmable gate arrays) act as the computing vehicles to implement this powerful technology. Readers will be guided into adopting a completely new way of handling existing design concerns and be able to make use of the vast opportunities possible with reconfigurable logic in this rapidly evolving field. Designed for both hardware and software programmers. Views of reconfigurable programming beyond standard programming languages. Broad set of case studies demonstrating how to use FPGAs in novel and efficient ways.
