Advances in Stereotactic and Functional Neurosurgery 11 Björn A. Meyerson, Christoph Ostertag, 2012-12-06 This volume contains selected contributions from the XIth Meeting of the European Society for Stereotactic and Functional Neurosurgery held in September 1994 in Antalya Turkey Most of the papers deal with the many therapeutic and technical advancements made in this field of neurosurgery The emergence of new stereotactic methodologies such as frameless stereotaxy and other forms of neuronavigation have become an indispensable tool for all types of neurosurgical operations An increasing number of young neurosurgeons takes an interest in the neurosurgical approaches to the treatment of movement disorders chronic pain and epilepsy This is a clear sign of the growing awareness of the long neglected fact that these neurosurgical treatments can be offered to large patient populations Neurotransplantation as a novel treatment of Parkinson's disease has paved the way for the application of this technology for other indications The pioneering work performed by the late Edward Hitchcock is reviewed here There is a renewed interest in pallidotomy for dealing with certain forms of Parkinson's disease and certain aspects of this operation are discussed in another paper Progress in the neurosurgical treatment of pain is dealt with by contributions on refined techniques of percutaneous cordotomy DREZ operations and critical evaluations of spinal cord stimulation A novel approach is a report on the experiences of treating cancer pain by intraspinal implantation of chromaffin cells Several contributions cover the important issues of novel techniques for the study of neural dysfunction preoperative monitoring with PET microrecording magnetoencephalography and other techniques

*Perspective in Image-guided Surgery* Thorsten M. Buzug, Tim Lueth, 2004 The application of computer aided planning navigation and robotics in surgery provides significant advantages due to today's sophisticated techniques of patient data visualization in combination with the flexibility and precision of novel robots Robotic surgery is set to revolutionize surgical procedures Augmented with 3D image guidance technology these tools give finer control over sensitive movements in diseased areas and therefore allow more surgical procedures to be performed using minimally invasive techniques This book provides an overview of new image guided procedures in all areas of medical application The proceedings have been selected for coverage in OCo Index to

 Linderoth,Giovanni Broggi,2012-12-06 Neurosurgery o the Future Computers and Robots in Clinical Neurosurgical Practice  
 and in Training a Philosophical Journey into the Future Many present day neurosurgeons believe that they already obtain  
 good results in operative surgery with the benefit of the operating microscope and other aids which have become available in  
 the last three decades and that the introduction of computers and robots to the operating theatre is superfluous However it is  
 clear from analogy with the function of the airline pilot another profession where there are great demands on manual skill  
 and on spatial awareness that these devices do have much to offer neurosurgery Classical neurosurgery in the time of  
 Cushing Dandy and Scarff was based on a three dimensional picture of the patient s brain formed in the surgeon s mind and  
 often illustrated in elegant drawings Such pictures were based on neuroradiological studies by pneumoencephalography  
 ventriculography or by angiography Generally these stud ies showed the presence and position of a lesion by displacement of  
 normal brain structures and the picture was built up by interference This was then converted by the experienced  
 neurosurgeon into a plan for the craniotomy site and the trajectory of the surgical approach Once the brain was exposed  
 further pre operative information was obtained by visual inspection and by palpation with the brain needle These classical  
 forms ofneuroradiology have largely been superseded by computerised tomography and by magnetic resonance imaging
