*Sociology, Organic Farming, Climate Change and Soil Science* Eric Lichtfouse, 2009-12-01 Sustainable agriculture is a rapidly growing field aiming at producing food and energy in a sustainable way for humans and their children Sustainable agriculture is a discipline that addresses current issues such as climate change increasing food and fuel prices poor nation starvation rich nation obesity water pollution soil erosion fertility loss pest control and biodiversity depletion Novel environmentally friendly solutions are proposed based on integrated knowledge from sciences as diverse as agronomy soil science molecular biology chemistry toxicology ecology economy and social sciences Indeed sustainable agriculture decipher mechanisms of processes that occur from the molecular

level to the farming system to the global level at time scales ranging from seconds to centuries For that scientists use the system approach that involves studying components and interactions of a whole system to address scientific economic and social issues In that respect sustainable agriculture is not a classical narrow science Instead of solving problems using the classical painkiller approach that treats only negative impacts sustainable agriculture treats problem sources Because most actual society issues are now intertwined global and fast developing sustainable agriculture will bring solutions to build a safer world This book series gathers review articles that analyze current agricultural issues and knowledge then propose alternative solutions It will therefore help all scientists decision makers professors farmers and politicians who wish to build a safe agriculture energy and food system for future generations Unveiling the Mycorrhizal World Everlon

Rigobelo,2024-08-28 Mycorrhizal fungi are widespread organisms found in various regions across the globe that are closely related to a broad range of root plant species including agricultural crops These fungi exhibit multiple traits that promote plant growth and numerous studies have demonstrated their ability to increase plant growth by improving the availability and efficiency of nutrient and water uptake from the soil Specifically mycorrhizal fungi have been shown to increase the availability of nitrogen and phosphorus in plants While these fungi cannot fix nitrogen from the atmosphere they are capable of mineralizing organic matter releasing nitrogen that is trapped in molecules and cellular organelles In addition arbuscular mycorrhizal fungi AMF can increase phosphorus availability in plants However high levels of phosphorus in the soil can decrease the interactions between the fungus and the host plant Some studies have shown that mycorrhizal fungi can enhance plant tolerance to environmental stress In summary mycorrhizal fungi can be used to promote plant growth improve nutrient utilization efficiency reduce environmental impacts and production costs and enhance plant tolerance to cope with stress conditions The use of AMF is an excellent strategy to achieve sustainable production **Local Science Vs. **Science** Paul Sillitoe,2007 While science has achieved a remarkable understanding of nature affording humans an astonishing technological capability it has led through Euro American global domination to the muting of other cultural views and values even threatening their continued existence There is a growing realization that the diversity of knowledge systems demand respect some refer to them in a conservation idiom as alternative information banks The scientific perspective is only one We now have many examples of the soundness of local science and practices some previously considered primitive and in need of change but this book goes beyond demonstrating the soundness of local science and arguing for the incorporation of others knowledge in development to argue that we need to look quizzically at the foundations of science itself and further challenge its hegemony not only over local communities in Africa Asia the Pacific or wherever but also the global community The issues are large and the challenges are exciting as addressed in this book in a range of ethnographic and institutional contexts *Proceedings of the 1st International Conference on Industry Science Technology and Sustainability (IConISTS 2023)* Ahmad Zakaria,Ahmad Herison,Hasrul Anwar,Devi Kurnia Sari,Zillia Chairani,Fariq Khadafi,2024-08-01 This is an

Open Access Book Welcome to the 1st International Conference on Industry Science Technology and Sustainability a groundbreaking platform dedicated to fostering innovation for a sustainable future This esteemed conference aims to bring together leading experts researchers scholars and industry professionals from around the world to explore and discuss the latest advancements in various fields that intersect industry science technology and sustainability Our conference revolves around the central theme of Innovation for Sustainability recognizing the pressing need for transformative solutions to address the challenges posed by climate change resource depletion and environmental degradation With a focus on sustainability we seek to harness the power of innovation research and collaboration to drive positive change and ensure a harmonious coexistence between humanity and the environment

**An Introduction to Agroforestry** P. K. R.

Nair,1993-07-31 This college level textbook summarizes the state of current knowledge in the rapidly expanding field of agroforestry The book organized into 25 chapters in six sections reviews the developments in agroforestry during the past 15 years and describes the accomplishments in the application of biophysical plant and soil related and socioeconomic sciences to agroforestry Although the major focus of the book is on the tropics where the practice and potential of agroforestry are particularly promising the developments in temperate zone agroforestry are also discussed This text is recommended for students teachers and researchers in agroforestry farming systems and tropical land use

**Indigenous Agriculture** Neha

Chopra,AI,2025-03-29 Indigenous Agriculture explores the ingenious and sustainable farming methods developed by indigenous cultures worldwide It reveals how these time tested practices often overlooked hold crucial lessons for modern agriculture and environmental conservation These methods demonstrate a deep understanding of ecological balance offering insights into resilient agriculture and long term resource management For example ancient civilizations utilized sophisticated techniques like terracing and crop rotation which not only sustained populations for centuries but also promoted soil conservation and ecological harmony The book examines diverse indigenous approaches from water management systems to agroecology set against the backdrop of environmental change and food security challenges It acknowledges the disruptive impact of colonialism on traditional land management advocating for a decolonizing agriculture approach The book progresses with an introduction to core concepts delves into specific successful farming systems and concludes with a discussion on integrating traditional techniques into modern agriculture It argues that understanding these traditional techniques can lead to more sustainable and culturally sensitive food production bridging history science and environmental studies
