## **Hot Isostatic Processing:**

**Hot Isostatic Processing** H.V. Atkinson, B.A. Rickinson, 1991-12-31 The aim of this book is to provide an introduction to the increasingly exploited technology of Hot Isostatic Pressing HIPping It is intended for two audiences Firstly the manufacturing or design engineer who may not have a materials science background but who needs to develop an appreciation of the scope of the HIPping process Secondly the engineering or materials undergraduate who needs to understand how HIPping as a modern manufacturing method can offer potential improvements to material properties relative to more conventional techniques Isostatic Pressing M. Koizumi, M. Nishihara, 1991-06-30 This updated volume is intended as a reference text on the technology of hot and cold isostatic pressing together with applications for development of new materials

**Hot Isostatic Processing** H. D. Hanes, D. A. Seifert, C. R. Watts, 1979 **Hot Isostatic Pressing— Theory and Applications** M. Koizumi, 2012-12-06 The HIP process was originally devised for diffusion bonding of nuclear fuel elements at Battelle Memorial Institute in the United States in the mid 1950s This innovative technique has been a subject of global research and development and was applied to the cemented carbide industry at the end of the 1960s by ASEAj Sandvik Since then this process has been applied to many kinds of industrial materials including tool steel superalloys and electronic and ceramic materials In very recent years HIPping technology has been applied even to R D of high temperature superconducting materials and of a composite process with self combustion reaction On this occasion we should recognize that the 3rd HIP Conference was held in the midst of such progress of HIP technology and that it was the first international conference which was held in Asia in the field of HIP and CIP technologies The conference was very successful with about 250 participants from 13 countries including Japan About 90 presentations including nine invited lecturers 44 oral and 35 poster presentations were offered and all contributions were at a high level and contained valuable results which had been attained in recent years Hot Isostatic Pressing F. H. Froes, John Hebeisen, Robert Widmer, 1996 Hot Isostatic Pressing Pranesh Dayal, Gerry Triani, 2019-03-15 Hot Isostatic Pressing HIP has important applications in advanced materials manufacturing automotive aerospace oil and gas industries power generation and medical and nuclear fields The symposium focused on HIP applications in such areas as material optimization radioactive nuclear waste cast aluminum alloys ceramic materials superalloys manufacturing of turbine blisks densification of additive manufactured parts diffusion welding of dissimilar metals and alloys heat treatment inside the HIP unit turbopump components improved tooling materials valve spindles for engines Ni base superalloys titanium aluminide stainless steels metal matrix composites phase transformations uniform load cooling equipment duplex steel diamond SiC composites large hot zone units additive manufacturing efficient modeling reactor vessel fabrication electron beam welding superconducting magnet structures

**Hot Isostatic Processing** H. D. Hanes, 1980 Hot Isostatic Pressing '93 L. Delaey, H. Tas, 2012-12-02 Various topics related to Hot Isostatic Pressing are presented in this volume As well as papers on more general aspects of HIPping the papers are organised

into four groups metals and alloys ceramics HIP engineering and HIP fundamentals Castings powder metallurgy intermetallics surface engineering and diffusion bonding are covered in the first group The papers on ceramics give special attention to HIPing of structural and functional ceramics as well as to ceramic composites Some interesting HIP engineering innovations are presented on HIP equipment and HIP technology The papers which discuss HIP fundamentals focus around materials modelling and component modelling
