Connor,1998 Written as an introduction for professionals this book gives the reader an overall grasp of how hospice care is practised the challenges hospices currently face and the direction the movement is taking The author claims that in spite of expansion people are not aware of the work of hospices *The Production of Hospice Space* Sarah McGann,2016-03-03 Challenging the widely held notion of a hospice as a building or a place this book argues that it should instead be a philosophy of care It proposes that the positive and negative impact that space can have in the pursuit of an ideal such as hospice care has previously been underestimated Whether it be a purpose built hospice part of a hospital a nursing home or within the home a hospice is anchored by space and spatial practices and these spatial practices are critical for a holistic approach to dying with dignity Such spatial practices are understood as part of a broad architectural social conceptual and theoretical process By linking health social and architectural theory and establishing conceptual principles this book defines hospice as a philosophy that is underpinned by space and spatial practice In putting forward the notion of hospice space removed from the bounds of a specific building type it suggests that hospice philosophy could and should be available within any setting of choice where the spatial practices support that philosophy be it home nursing home hospice or hospice friendly hospitals *Innovations in Hospice Architecture* Stephen Verderber,Ben J. Refuerzo,2019-11-25 This fully revised new edition of *Innovations in Hospice Architecture* responds to the need for an up to date theoretically based reference book summarizing key historical and recent developments with respect to this rapidly evolving building type This Second Edition presents an overview of the historical origins of the contemporary hospice the diverse variations on the basic premise of hospice care a review of the scant architectural literature published on this subject to date a broad series of case studies of exemplary hospices around the

world planning and design concepts for palliative care environments Case study projects are from Japan Canada Europe Africa Australia Indonesia China the United States and South America Thirty six case studies are individually presented and comparatively analysed and prognostications for the future of hospice architecture are examined Each case includes floor plans technical drawings and beautiful full colour illustrations Through an in depth discussion of the inner profundities of hospice architecture the book presents this type as a humane genuine expression of the spiritual physical and psychosocial dimensions of the contemporary death and dying movement Written with a broad audience in mind the book provides both technical and conceptual information blending narrative images and diagrammation so that the audience may understand and articulate the complexities of this specialized building type in professional practice contexts Aging ,1972
